

BMS INSTITUTE OF TECHNOLOGY AND MANAGEMENT

(Autonomous Institute affiliated to VTU, Belagavi, Approved by AICTE, New Delhi) Avalahalli, Yelahanka, Bengaluru 560064

Bachelor of Engineering

Department of Electrical & Electronics Engineering

Approved in the BoS meeting held on 23.08.2024

III and IV Semester Scheme and Syllabus 2022 Scheme (2023 Batch) - Autonomous

Vision and Mission of the Department

Vision of the Department:

To emerge as one of the finest Electrical & Electronics Engineering Departments facilitating the development of competent professionals, contributing to the betterment of society.

Mission of the Department:

Create a motivating environment for learning Electrical Sciences through teaching, research, effective use of state of the art facilities and outreach activities.

Program Educational Objectives (PEOs)

Graduates of the program will,

PEO1	Have successful professional careers in Electrical Sciences, and Information Technology enabled areas and be able to pursue higher education.
PEO2	Demonstrate ability to work in multidisciplinary teams and engage in lifelong learning.
PEO3	Exhibit concern for environment and sustainable development.

After the successful completion of the course, the graduate will be able to,

P01:	Apply the knowledge of mathematics, science, engineering									
Engineering	fundamentals, and an engineering specialization to the solution of									
knowledge	complex engineering problems.									
PO2:	Identify, formulate, review research literature, and analyze complex									
Problem analysis	engineering problems reaching substantiated conclusions using first									
	principles of mathematics, natural sciences, and engineering sciences.									
P03:	Design solutions for complex engineering problems and design system									
Design/development	components or processes that meet the specified needs with appropriate									
of solutions	consideration for the public health and safety, and the cultural, societal,									
	and environmental considerations.									
P04:	Use research-based knowledge and research methods including design									
Conduct	of experiments, analysis and interpretation of data, and synthesis of the									
investigations of	information to provide valid conclusions.									
complex problems	1									
P05:	Create, select, and apply appropriate techniques, resources, and modern									
Modern tool usage	engineering and IT tools including prediction and modeling to complex									
	engineering activities with an understanding of the limitations.									
P06:	Apply reasoning informed by the contextual knowledge to assess									
The engineer and	societal, health, safety, legal and cultural issues and the consequent									
society	responsibilities relevant to the professional engineering practice.									

P07:	Understand the impact of the professional engineering solutions in		
Environment and	societal and environmental contexts, and demonstrate the knowledge of,		
sustainability	and need for sustainable development.		
PO8: Ethics	Apply ethical principles and commit to professional ethics and		
	responsibilities and norms of the engineering practice.		
P09:	Function effectively as an individual, and as a member or leader in		
Individual and team	diverse teams, and in multidisciplinary settings.		
work			
PO10:	Communicate effectively on complex engineering activities with the		
Communication	engineering community and with society at large, such as, being able to		
	comprehend and write effective reports and design documentation,		
	make effective presentations, and give and receive clear instructions.		
P011:	Demonstrate knowledge and understanding of the engineering and		
Project management	management principles and apply these to one's own work, as a member		
and finance	and leader in a team, to manage projects and in multidisciplinary		
	environments.		
P012:	Recognize the need for, and have the preparation and ability to engage		
Life-long learning	in independent and life-long learning in the broadest context of		
	technological change.		

Program Specific Outcomes (PSOs)

The Graduates of the Program will be able to

PSO1:	Analyze and design electrical power systems.
PSO2:	Analyze and design electrical machines.
PSO3:	Analyze and design power electronic controllers for industrial drives.
PSO4 :	Analyze and design analog and digital electronic systems.

BMS Institute of Technology and Management (An Autonomous Institution, Affiliated to VTU Belagavi) Avalahalli, Doddaballapur Main Road, Bengaluru, Karnataka – 560064

CONTINUOUS INTERNAL EVALUATION (CIE) AND SEMESTER END EXAMINATION (SEE) PATTERN

(Applicable to UG students admitted from the 2022 batch, effective from the Academic year 2024-25 onwards)

The UG students admitted from the 2022 batch onwards are hereby informed to note the following regarding Continuous Internal Evaluation and Semester End Examination pattern:

- The Weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Examination (SEE) is 50%.
- The Minimum passing mark for the CIE is 40% of the Maximum marks (i.e. 20 marks out of 50) and for the SEE minimum passing mark is 35% of the Maximum marks (i.e. 18 out of 50 marks).
- A student will be declared to have passed the course if they secure a minimum of 40% (i.e. 40 marks out of 100) in the combined total of the CIE and SEE.

The following tables summarize the CIE and SEE Patterns for the courses of various credits:

INT	EGRATED P ROF		COMPET DR 3 CRE		OURSE	(IPCC) COURSES	
Evaluation Type		Internal Assessme nts (IAs)		Marks to be scaled down to	Min. Marks to be Scored	Evaluation Details	
	CIE - Internal Assessment (IA) Tests	CIE – Test 1 (1.5 hr)	40	20		The sum of the two internal assessment tests will be 80 Marks and the same shall be scaled down to 20 Marks .	
Theory		CIE – Test 2 (1.5 hr)	40		- Free-

Learning Activities for CCAs:

A faculty member may choose the following CCAs based on the needs of the course:

- 1. Course project
- 2. Literature review
- 3. MOOC
- 4. Case studies
- 5. Tool exploration
- 6. GATE-based aptitude test
- 7. Open book tests
- 8. Industry integrated learning
- 9. Analysis of Industry / Technical / Business reports
- 10. Programming assignments with higher Bloom level
- 11. Group discussions
- 12. Industrial / Social / Rural projects

SEMESTER - III

Mathematics - III for EE Engineering (3:0:0:0)

(Effective from the academic year 2022-23)						
Course Code	BMATE301	CIE Marks	50			
Teaching Hours/Week (L: T:P: S)	3:0:0:0	SEE Marks	50			
Total Number of Contact Hours	40	Exam Hours	3			

Course Objectives:

This course aims to prepare the students to:

- To acquaint the students with differential equations and their applications in electrical engineering.
- To find the association between attributes and the correlation between two variables.
- Learn to use Fourier series to represent periodical physical phenomena in engineering analysis and to enable the student to express non periodic functions to periodic function using Fourier series and Fourier transforms.
- To learn the basic ideas of the theory of probability and random signals.

Module - 1

Module-1: Ordinary Differential Equations of Higher Order:

Higher-order linear ODEs with constant coefficients - Inverse differential operator, problems. Linear differential equations with variable Coefficients-Cauchy's and Legendre's differential equations–Problems. Application of linear differential equations to L-C circuit and L-C-R circuit. (8 Hours)

Module – 2

Curve fitting, Correlation, and Regressions:

Principles of least squares, Curve fitting by the method of least squares in the form y = a + bx, $y = a + bx + cx^2$, and $y = ax^b$. Correlation, Coefficient of correlation, Lines of regression, Angle between regression lines, standard error of estimate, rank correlation.

(8 Hours)

Module - 3

Fourier series:

Periodic functions, Dirichlet's condition. Fourier series expansion of functions with period 2π and with arbitrary period: periodic rectangular wave, Half-wave rectifier, rectangular pulse, Saw tooth wave. Half-range Fourier series. Triangle and half range expansions, Practical harmonic analysis, variation of periodic current.

Moule-4

(8 Hours)

Fourier transforms and Z -transforms:

Definition, Fourier sine, and cosine transform. Inverse Fourier transforms Inverse Fourier cosine and sine transforms. Problems.

Z-transforms: Definition, Standard z-transforms, Damping, and shifting rules, Problems. Inverse z-transform and applications to solve difference equations.

(8 Hours)

Moule-5

Probability Distributions:

Review of basic probability theory. Random variables (discrete and continuous), probability mass and density functions. Mathematical expectation, mean and variance. Binomial, Poisson and normal distributions- problems (derivations for mean and standard deviation for Binomial and Poisson distributions only)-Illustrative examples. Exponential distribution.

(8 Hours)

Course outcomes:

The students will be able to:

- CO1: Understand that physical systems can be described by differential equations and solve such equations.
- CO2: Make use of correlation and regression analysis to fit a suitable mathematical model for statistical data.
- CO3: Demonstrate the Fourier series to study the behavior of periodic functions and their applications in system communications, digital signal processing, and field theory.
- CO4: To use Fourier transforms to analyze problems involving continuous-time signals and to apply Z-Transform techniques to solve difference equations.
- CO5: Apply discrete and continuous probability distributions in analyzing the probability models arising in the engineering field.

Course outcomes

At the end of the course, the student will be able to:

- 1. Examine the open circuit and short circuit condition in an electric circuit.
- 2. Determine the power in three phase circuits
- 3. Discuss the resonance in series and parallel circuits and solve electric circuits using two port parameters.
- 1. Apply Laplace transformation and Inverse Laplace Transformation techniques to solve electric circuits.
- 5. Analyze DC and AC networks using basic network reduction techniques, Mesh Current and Node Voltage analysis Methods and Network Theorems.
- 6. Analyze electrical circuits under Transients, with initial conditions.

Course objectives:							

- To familiarize the basic laws, source transformations, theorems and the methods of analyzingelectrical circuits.
- To explain the use of network theorems and the concept of resonance.
- To familiarize the analysis of three-phase circuits, two port networks and networks with non-sinusoidal inputs.
- To explain the importance of initial conditions, their evaluation and transient analysis of R-L and R-Ccircuits.
- To impart basic knowledge on network analysis using Laplace transforms.

Module – 1

Diode Circuits: Diode clipping, clamping circuits and voltage doublers.

Transistor Biasing and Stabilization:

The operating point, load line analysis, DC analysis and design of fixed bias circuit, emitter stabilized bias circuit, collector to base bias circuit, voltage divider bias circuit. Bias stabilization and stability factors for voltage divider bias circuit, bias compensation, Transistor switching circuits.

(8 hours)

Module – 2

Transistor at Low Frequencies:

Hybrid model, h-parameters for CE, CC and CB modes, mid-band analysis of single stage amplifier, simplified hybrid model, analysis for CE, CB and CC (emitter voltage follower circuit) modes, Millers Theorem and its dual, analysis for collector to base bias circuit and CE with un bypassed and unbypassed emitter resistance.

Transistor frequency response:

General frequency considerations, effect of various capacitors on frequency response, , high frequency response, hybrid - pi model, CE short circuit current gain using hybrid pi model, multistage frequency effects.

Multistage amplifiers:

Transistor Ampliers, Cascade and Cascade connections, Darlington circuits, analysis and design. Cascade connection, analysis for CE-CC mode, CE-CE mode, CASCODE stage-un-bypassed and bypassedemitter resistance modes, Darlington connection using h-parameter model.

Feedback Amplifiers:

Classification of feedback amplifiers, concept of feedback, general characteristics of negative feedbackamplifiers, Input and output resistance with feedback of various feedback amplifiers, analysis of different practical feedback amplifier circuits.

(8 hours)

Power Amplifiers:

Classification of power amplifiers, Analysis of class A, Class B, amplifiers, Distortion in power amplifiers, second harmonic distortion, harmonic distortion in Class B amplifiers, cross over

Moule-4

Module – 3

(8 hours)

distortion and elimination of cross over distortion. **Oscillators:**

Concept of positive feedback, frequency of oscillation for RC phase oscillator, Wien Bridge oscillator, Tuned oscillator circuits, Hartley oscillator, Colpitt's oscillator, crystal oscillator and its types.

(8 hours)

FETs:

Construction, working and characteristics of JFET and MOSFE T (enhance and Depletion type), Biasing of JFET and MOSFET. Fixed bias configuration, self-bias configuration, voltage divider biasing. Analysis and design of JFET (only common source configuration with fixed bias) and MOSFET amplifiers.

(8 hours)

Sl. No	Experiments
	(to be carried out using discrete components)
1	Experiments on series, shunt and double ended clippers and clampers.
2	Design, simulation and Testing of Full wave – centre tapped transformer type and Bridge
	type
	rectifier circuits with and without Capacitor filter. Determination of ripple factor,
	regulationand efficiency.
3	Static Transistor characteristics for CE, CB and CC modes and determination of h
	parameters.
4	Frequency response of single stage BJT and FET RC coupled amplifier and determination of
	half power points, bandwidth, input and output impedances.
5	Design and testing of BJT -RC phase shift oscillator for given frequency of oscillation.
6	Design, simulation (MATLAB/SPICE) and testing of Wien bridge oscillator for given
	frequency of
	oscillation
7	Design and testing of Hartley and Colpitts's oscillator for given frequency of oscillation
8	Determination of gain, input and output impedance of BJT Darlington emitter follower
	with
	and without bootstrapping.
9	Design and testing of Class A and Class B power amplifier and to determine conversion
	Efficiency.
10	Design and simulation of Full wave – centre tapped transformer type and Bridge type
	rectifier
	circuits with and without Capacitor filter using MATLAB/SPICE. Determination of ripple
	factor, regulation and efficiency.
	se outcomes
	end of the course, the student will be able to:
1.	Illustrate the concepts of diode and transistor circuits.
2.	Design and test wave shaping circuits using diodes. Analyze amplifier circuits with transistors.
	Analyze amplifier circuits with transistors.
4.	Build simulation and hardware electronics circuits based on the application.
5.	Design and test transistor circuitry as amplifiers and oscillators.

PRACTICAL COMPONENT OF IPCC

B.E. ELECTRICAL AND ELECTRONICS ENGINEERING

Choice Based Credit System (CBCS) SEMESTER - III

Transformers and Generators (3:0:0) 3 (Effective from the academic year 2022-23)							
Course Code	BEE304	CIE Marks	50				
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50				
Total Number of Contact Hours	40	Exam Hours	3				

Course objectives:

This course will enable students to:

- To acquaint the students with differential equations and their applications in electrical engineering
- To find the association between attributes and the correlation between two variables
- Learn to use Fourier series to represent periodical physical phenomena in engineering analysis and to enable the student to express non periodic functions to periodic function using Fourier series and Fourier transforms.
- To learn the basic ideas of the theory of probability and random signals.

Module – 1

Transformers: Necessity of transformer, Classification (Power Transformers, Distribution Transformers, Measurement Transformers, Indoor Transformers, Outdoor Transformers). Standard ratings, Difference between Power Transformers, Distribution Transformers, Advantages and Disadvantages of transformers, Practical application in daily usage.

Generators: Standard ratings, Difference between AC and DC generator, Advantages, Practical application in daily usage, Portable vs. Standby Generator.

(8 hours)

Module – 2

Single phase Transformers: Principle of operation, Types and construction, EMF equation, equivalent circuit, Operation of practical transformer under no-load and on-load with phasor diagrams. Losses and methods of reducing losses, efficiency and condition for maximum efficiency. Polarity test, Sumpner's test. Open circuit and Short circuit tests, calculation of equivalent circuit parameters. Predetermination of efficiency, voltage regulation and its significance. Numerical.

(8 hours)

Module – 3

Three-phase Transformers: Introduction, Constructional features of three-phase transformers. Transformer connection for three phase operation– star/star, delta/delta and star/delta, comparative features. Labelling of three-phase transformer terminals.

Parallel Operation of Transformers: Necessity of Parallel operation, conditions for parallel operation– Single phase and three phase. Load sharing in case of similar and dissimilar transformers. Numerical.

Auto transformers and Tap changing transformers: Introduction to autotransformer-copper economy, equivalent circuit, no load and on load tap changing transformers. Numerical.

(8 hours)

Moule-4

Synchronous Generators: Construction, working, Armature windings, winding factors, EMF equation. Harmonics–causes, reduction and elimination. Armature reaction, Synchronous reactance, Equivalent circuit.

Synchronous Generators Analysis: Open circuit and short circuit characteristics, Assessment of reactance-short circuit ratio, Alternator on load. Voltage regulation. Voltage regulation by EMF and MMF methods. Excitation control for constant terminal voltage. Numerical.

(8 hours)

Moule-5

Synchronous Generators (Salient Pole): Effects of saliency, two-reaction theory, Parallel operation of generators and load sharing. Methods of Synchronization, Synchronizing power. Performance of Synchronous Generators: Power angle characteristic (salient and non-salient pole), power angle diagram, reluctance power, Capability curve for large turbo generators. Hunting and damper windings. Numerical.

(8 hours)

Course outcome (Course Skill Set)

At the end of the course, the student will be able to:

- CO1: Describe the operational principles of transformers and synchronous generators.
- CO2: Analyse the performance of single phase, three phase transformer for different loading conditions.
- CO3: Analyse the performance of synchronous generator when in parallel operation and evaluate the regulation by different methods.

Suggested Learning Resources:

Textbooks

B.E. ELECTRICAL AND ELECTRONICS ENGINEERING

Choice Based Credit System (CBCS)

SEMESTER - III

Digital Logic Circuits (3:0:0) 3
(Effective from the academic year 2022-23)Course CodeBEE306ACIE Marks50Teaching Hours/Week (L:T:P)3:0:0SEE Marks50Total Number of Contact Hours40Exam Hours3

Course objectives:

- To illustrate simplification of algebraic equations using Karnaugh Maps and Quine-McClusky methods
- To design decoders, encoders, digital multiplexer, adders, subtractors and binary comparators
- To explain latches and flip-flops, registers and counters
- To analyze Melay and Moore Models
- To develop state diagrams synchronous sequential circuits
- To understand the applications of sequential circuits
- To provide the basic language features of Verilog HDL and the role of HDL in digital logic design

Module – 1

Principles of Combinational Logic:

Definition of combinational logic, canonical forms, Generation of switching equations from truth tables, Karnaugh maps-3,4,5 variables, Incompletely specified functions (Don't care terms) Simplifying Max term equations, Quine-McCluskey minimization technique, Quine- McCluskey using don't care terms, Reduced prime implicants Tables.

(8 hours)

Module – 2

Analysis and Design of Combinational logic: General approach to combinational logic design, Decoders, BCD decoders, Encoders, digital multiplexers, Using multiplexers as Boolean function generators, Adders and subtractors, Cascading full adders, Look ahead carry, Binary comparators.

(8 hours)

Module – 3

Flip-Flops: Basic Bistable elements, Latches, Timing considerations, The master-slave flip-flops (pulse triggered flip-flops): SR flip-flops, JK flip-flops, Edge triggered flip- flops, Characteristic equations

(8 hours)

Moule-4

Flip-Flops Applications: Registers, binary ripple counters, synchronous binary counters, Counters based on shift registers, Design of a synchronous counter, Design of a synchronous mod-n counter using clocked T, JK, D and SR flip-flops.

(8 hours)

Moule-5

Sequential Circuit Design: Mealy and Moore models, State machine notation, Synchronous Sequential circuit analysis, Construction of state diagrams, counter design.

Introduction to Verilog: Structure of Verilog module, Operators, Data Types, Styles of Description.

(8 hours)

Course outcome (Course Skill Set)

CO1: Apply the knowledge of simplification and optimization of combinational logic circuits

CO2: Design and analyze combinational logic circuits

CO3: Design and analyze the Flipflops and its applications

CO4: Design Sequential circuits, develop Mealy/Moore models and state diagrams.

CO5: Understand the Concepts of Verilog.

Electrical Measurements and Instrumentation (3:0:0) 3 (Effective from the academic year 2022-23)						
Course Code						
Feaching Hours/Week (L:T:P)3:0:0SEE Marks50						
Total Number of Contact Hours	40	Exam Hours	3			

AND DI DOTTO ONICO DNO

Course objectives:

- To understand the significance and methods of Measurements, elements of generalized measurement system and errors in measurements.
- To measure resistance, inductance, capacitance by use of different bridges.

DODDIGAL

- To study the construction, working and characteristics of various instrument transformers.
- To have the working knowledge of electronic instruments and display devices.

Module – 1

Measurements and Measurement systems:

Introduction, significance and methods of Measurements, Instruments and measurement systems, Mechanical, electrical and electronic instruments. Classification of instruments. Functions and applications of Measurement systems. Types of Instrumentation systems, information and signal processing. Elements of generalized measurement system. Input-output configurations of measuring instruments and measurement systems. Methods of correction for interfering and modifying inputs, errors in measurements, Accuracy and precision.

(8 hours)

Module – 2

Measurement of Resistance: Wheatstone's bridge, sensitivity, limitations. Kelvin's double bridge. Earth resistance measurement by fall of potential method and by using Megger.

Measurement of Inductance and Capacitance: Sources and detectors, Maxwell's inductance and capacitance bridge, Hay's bridge, Anderson's bridge, Desauty's bridge, Schering bridge. Shielding of bridges. (Derivations and Numerical as applicable).

(8 hours)

Module – 3

Instrument Transformers: Introduction, Use of Instrument transformers. Burden on Instrumenttransformer.

Current transformer (CT): Relationships in CT, Errors in CT, characteristics of CT, causes and reduction of errors in CT, Construction and theory of CT (No derivations).

Potential transformer (PT): Difference between CT and PT, Relationships in PT, Errors in PT characteristics of PT, reduction of errors in PT (No derivations).

Magnetic measurements: Introduction, measurement of flux/ flux density, magnetizing force and leakage factor.

Moule-4

(8 hours)

Electronic and Digital Instruments: Introduction. Essentials of electronic instruments, Advantages of electronic instruments. True RMS reading voltmeter. Electronic mustimeters. Digital voltmeters (DVM) - Ramp type DVM, Integrating type DVM and Successive - approximation DVM. Q meter. Principle of working of electronic energy meter (with block diagram), extra features offered by present day meters and their significance in billing.

(8 hours)

Moule-5

Display Devices: Introduction, character formats, segment displays, Dot matrix displays, Bar graph displays. Cathode ray tubes, Light emitting diodes, Liquid crystal displays, Nixes, Incandescent, Fluorescent, Liquid vapor and Visual displays.

Recording Devices: Introduction, Strip chart recorders, Galvanometer recorders, Null balance recorders, Potentiometer type recorders, Bridge type recorders, LVDT type recorders, Circular chart and xy recorders. Digital tape recording, Ultraviolet recorders. Electro Cardio Graph (ECG).

(8 hours)

Course Outcomes:

At the end of the course, the student will be able to:

- 1. Explain the working of various recording and display devices
- 2. Apply the bridge measurement techniques for unknown values of passive elements such as resistance, inductance and capacitance.
- 3. Use an appropriate measuring instrument to measure the important electrical parameters such as voltage, current, Power, Energy, Power Factor and Frequency

Text Books

B.E. ELECTRICAL AND ELECTRONICS ENGINEERING

Choice Based Credit System (CBCS)

SEMESTER - III					
ELECTROMAGNETIC FIELD THEORY (3:0:0) 3 (Effective from the academic year 2022-23)					
Course Code BEE306C CIE Marks 5					
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50		
Total Number of Contact Hours	40	Exam Hours	3		

Course objectives:

- To understand Scalars, Vectors, Cartesian co-ordinate system, relation between different coordinate systems, Coulomb's law, Electric field intensity and its evaluation for different charge conditions.
- To understand potential field of a point charge, Potential gradient, Energy density in the electrostatic field and conductor's properties and boundary conditions.
- To understand Poisson's and Laplace Equations, Biot Savart's law, Ampere's circuital law and Stokes theorem.
- To understand Magnetic force, Force between differential current elements. Force and torque on a closed circuit, Nature of magnetic materials and Magnetic boundary conditions.
- To understand Faraday's law, Displacement current. Maxwell's equations, Wave propagation in free space and in dielectrics.

Module – 1

Vector Analysis:

Scalars and Vectors, Vector algebra, Cartesian co-ordinate system, Vector Components and unit vectors. Scalar field and Vector field. Dot product and Cross product, Gradient of a scalar field. Divergence and Curl of a vector field. Co – ordinate systems: cylindrical and spherical, relation between different coordinate systems. Expression for gradient, divergence and curl in rectangular, cylindrical and spherical co-ordinate systems. Numerical.

Electrostatics:

Coulomb's law, Electric field intensity and its evaluation for (i) point charge (ii) line charge (iii) surface charge (iv) volume charge distributions. Electric flux density, Gauss law and its applications. Maxwell's first equation (Electrostatics). Divergence theorem. Numerical.

(8 hours)

Module – 2

Energy and Potential:

Energy expended in moving a point charge in an electric field. The line integral. Definition of potential difference and potential. The potential field of a point charge and of a system of charges. Potential gradient. The dipole. Energy density in the electrostatic field. Numerical.

Conductor and Dielectrics:

Current and current density. Continuity of current. Metallic conductors, conductor's properties and boundary conditions. Perfect dielectric materials, capacitance calculations. Parallel plate capacitor with two dielectrics with dielectric interface parallel to the conducting plates. Numerical. **(8 hours)**

Module – 3

Poisson's and Laplace Equations:

Derivations and problems, Uniqueness theorem.

Steady magnetic fields:

Biot - Savart's law, Ampere's circuital law. The Curl. Stokes theorem. Magnetic flux and flux density. Scalar and vector magnetic potentials. Numerical.

(8 hours)

Moule-4

Magnetic forces:

Force on a moving charge and differential current element. Force between differential current elements. Force andtorque on a closed circuit. Numerical.

Magnetic Materials and Magnetism:

Nature of magnetic materials, magnetization and permeability. Magnetic boundary conditions. Magnetic circuit, inductance and mutual inductance. Numerical. **(8 hours) Moule-5**

Time Varying Fields and Maxwell's Equations:

Faraday's law, Displacement current. Maxwell's equations in point form and integral form. Numerical. **Uniform plane wave:**

Wave propagation in free space and indielectrics. Pointing vector and power considerations. Propagation in good conductors, skin effect. Numerical.

Course outcomes:

At the end of the course, the student will be able to:

- 1. Apply the fundamental knowledge of electrostatic fields to various phenomena.
- 2. Understand the characteristics of electromagnetic field for various charge and current distributions.

(8 hours)

- 3. Analyze and Apply the static and time varying fields of Maxwell's equations in electromagnetics.
- 4. Analyze and Solve problems involving different media in boundary region with uniform and non-uniform plane Wave.

Course objectives: This course will enable students to					

- Understand the basics of semiconductor physics and electronic devices
- Describe the mathematical models BGTs and FETs along with the constructional details •
- Understand the construction and working principles of optoelectronic devices
- Understand the fabrication process of semiconductor devices and CMOS process integration

Module - 1

Semiconductors

Bonding forces in solids, energy bands, metals, semiconductors and insulators, direct and indirect semiconductors, electrons and holes, intrinsic and extrinsic materials, conductivity and mobility, drift and resistance, effects of temperature and doping on mobility, Hall effect Text:1) 3.1.1 to 3.1.4, 3.2.1 to 3.2.4, 3.4.1 to 3.4.5

Module – 2

P-N JUNCTIONS:

Forward and reverse bias junctions, Qualitative description of current flow at a junction, reverse bias and reverse bias breakdown, Zener breakdown, avalanche breakdown, Thermal runaway. Text 1)5.3.1 to 5.3.3, 5.4, 5.4.1 to 5.4.3

Optoelectronic Devices:

Photo diodes, current and voltage in illuminated junction, solar cells, photo detectors, light emitting diode, light emitting materials. Text 1)8.1.1 to 8.1.3, 8.2, 8.2.1

(8 Hours)

(8 Hours)

Module – 3

Bipolar Junction Transistor:

Fundamentals of BJT operation, amplification with BJTs, BJT fabrication, the Coupled diode model (Ebers –Moll Model), switching operation of transistor, cutoff, saturation, switching cycle, specifications, drift in the base region, base narrowing, avalanche breakdown. Text 1)7.1 to 7.3, 7.5.1, 7.6, 7.7.1 to 7.7.3

(8 Hours)

Field Effect Transistors:

Basic PN JFET operation, equivalent circuit and frequency limitation, MOSFET two terminal MOS structure, energy band diagram, ideal capacitance voltage characteristics and frequency effects, basic MOSFET operation, MOSFET structure, current-voltage characteristics Text 2)9.1.1, 9.4, 9.6.1 - 9.6.2, 9.7.1-9.7.2, 9.8.1-9.8.2

Moule-5

(8 Hours)

Fabrication of PN junction:

Thermal oxidation, diffusion, rapid thermal processing, Ion implantation, chemical vapour deposition, photolithography, etching, metallization (Text 1)5.1 Integrated Circuits:

Background, evolution of ICs, CMOS process integration, integration of other circuit elements(Text

Moule-4

1)9.1-9.2, 9.3.1, 9.3.3.

Course outcome :

At the end of the course, the student will be able to:

- 1. Understand the principles of semiconductor physics
- 2. Illustrate the principles, mathematical model and characteristics of different types of semiconductor devices
- 3. Understand the fabrication process of semiconductor devices

Text Books:

Choice Based Credit System (CBCS)

SEMESTER - III

Social Connect and Responsibility

(Effective for 2022 Scheme)

Course Code	BSCK307	CIE Marks	100
Teaching Hours/Week (L: T:P)	0:0:2	SEE Marks	-
Total Number of Contact Hours	26 Hours	Exam Hours	-
Credits	01 - Credit		

Course objectives: The course will enable the students to:

- 1. Provide a formal platform for students to communicate and connect to the surrounding.
- 2. create a responsible connection with the society.
- 3. Understand the community in general in which they work.
- 4. Identify the needs and problems of the community and involve them in problem –solving.
- 5. Develop among themselves a sense of social & civic responsibility & utilize their knowledge in finding practical solutions to individual and community problems.
- 6. Develop competence required for group-living and sharing of responsibilities & gain skills in mobilizing community participation to acquire leadership qualities and democratic attitudes.

Social Connect & Responsibility -All Modules Activity Based Learning

Module-1

Plantation and adoption of a tree:

Plantation of a tree that will be adopted for four years by a group of BE / B.Tech students. (ONE STUDENT ONE TREE) They will also make an excerpt either as a documentary or a photo blog describing the plant's origin, its usage in daily life, its appearance in folklore and literature - Objectives, Visit, case study, report, outcomes.

(04 Hours)

Module-2

Heritage walk and crafts corner:

Heritage tour, knowing the history and culture of the city, connecting to people around through their history, knowing the city and its craftsman, photo blog and documentary on evolution and practice of various craft forms - – Objectives, Visit, case study, report, outcomes.

(05 Hours)

Module-3

Organic farming and waste management:

Usefulness of organic farming, wet waste management in neighboring villages, and implementation in the campus – Objectives, Visit, case study, report, outcomes.

(06 Hours)

Module-4

Water conservation:

Knowing the present practices in the surrounding villages and implementation in the campus, documentary or photoblog presenting the current practices – Objectives, Visit, case study, report, outcomes. (06 Hours)

Module-5

Food walk: City's culinary practices, food lore, and indigenous materials of the region used in cooking – Objectives, Visit, case study, report, outcomes.

(05 Hours)

Course outcomes (Course Skill Set): At the end of the course, the student will be able to:

CO1: Communicate and connect to the surrounding.

CO2: Create a responsible connection with society.

CO3: Involve in the community in general in which they work.

CO4: Notice the needs and problems of the community and involve them in problem –solving.

CO5: Develop among themselves a sense of social & civic responsibility & utilize their knowledge in finding practical solutions to individual and community problems.

CO6: Develop competence required for group-living and sharing of responsibilities & gain skills in mobilizing community participation to acquire leadership qualities and democratic attitudes.

ACTIVITIES: Jamming session, open mic, and poetry: Platform to connect to others. Share the stories with others. Share the experience of Social Connect. Exhibit the talent like playing instruments, singing, one-act play, art-painting, and fine art.

PEDAGOGY: The pedagogy will include interactive lectures, inspiring guest talks, field visits, social immersion, and a course project. Applying and synthesizing information from these sources to define the social problem to address and take up the solution as the course project, with your group. Social immersion with NGOs/social sections will be a key part of the course. Will all lead to the course project that will address the needs of the social sector?

COURSE TOPICS: The course will introduce social context and various players in the social space, and present approaches to discovering and understanding social needs. Social immersion and inspiring conversional will culminate in developing an actual, idea for problem-based intervention, based on an indepth understanding of a key social problem

Duration: A total of 26 hours engagement per semester is required for the 3rd semester of the B.E./B.Tech. program. The students will be divided into groups. Each group will be handled by faculty mentor. Faculty mentor will design the activities (particularly Jamming sessions open mic, and poetry) Faculty mentors have to design the evaluation system as per VTU guidelines of scheme & syllabus.

Guideline for Assessment Process: Continuous Internal Evaluation (CIE): After completion of the course, the student shall prepare with daily diary as reference, a comprehensive report in consultation with the mentor/s to indicate what he has observed and learned in the social connect period. The report should be signed by the mentor. The report shall be evaluated on the basis of the following criteria and/or other relevant criteria pertaining to the activity completed. Marks allotted for the diary are out of 50. Planning and scheduling the social connect Information/Data collected during the social connect Analysis of the information/data and report writing Considering all above points allotting the marks as mentioned below

Excellent: 80 to 100 Good: 60 to 79 Satisfactory: 40 to 59 Unsatisfactory and fail: <39

Special Note: NO Semester End Examination (SEE) – Completely Practical and activities-based evaluation

Pedagogy – Guidelines: It may differ depending on local resources available for the study as well as environment and climatic differences, location and time of execution.

NSS Individual Activities for Local Voice (Activity based learning)

Govt. school Rejuvenation and helping them to achieve good infrastructure, Plantation and adoption of plants. Know your plants. Spreading public awareness under rural outreach programs, National integration and social harmony events.

(06 Hours)

Course outcomes (Course Skill Set):

At the end of the course, the student will be able to:

CO1: Understand the importance of his / her responsibilities towards society.

CO2: Analyse the environmental and societal problems/issues and will be able to design solutions for the same.

CO3: Evaluate the existing system and to propose practical solutions for the same for sustainable development.

CO4: Implement government or self-driven projects effectively in the field.

CO5: Develop capacity to meet emergencies and natural disasters & practice national integration and social harmony in general.

Teaching Practice:

- Classroom teaching (Chalk and Talk)
- ICT Power Point Presentation
- Audio & Video Visualization Tools

The above 5 modules are common to all the sports events / games, we are offering the following games: **1. Baseball, 2. Kabaddi, 3. Table Tennis, and 4. Volleyball.**

Course outcomes:

The students will be able to:

- 1 Understand the importance of sports and games, inculcate healthy habits of daily exercise & fitness, Self-hygiene, good food habits, Create awareness of Self-assessment of fitness.
- 2 Develops individual and group techno tactical abilities of the game.
- 3 Increases the team combination and plan the strategies to play against opponents.
- 4 Outline the concept of sports training and how to adopt technology to attain high level performance.
- 5 Summarize the basic principles of organising sports events and concept of technology implemented to organise competitions in an unbiased manner.

Teaching Practice:

- Classroom teaching (Chalk and Talk)
- ICT Power Point Presentation and video analysing.
- Practical classes in outdoor and indoor as per requirement.

CIE: 100 Marks

- CIE 1 for 40 marks A theory paper which is MCQ / Descriptive conducted during the semester.
- CIE 2 for 60 marks A practical test conducted at the end of the semester in which the student has to give fitness and skill tests and his performance in game will be assessed.
