Course Prescribed to Lateral entry Diploma holders admitted to III Semester B.E.

| | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 1 | NCMC | 21DIP31A | Diploma Mathematics- I | MAT | 3 | 0 | 0 | 0 | 3 | 100 | -- | 100 |

- The Lateral Entry Students have to undergo Internship – I during the intervening vacation of 3rd and 4th semester.
- The Assessment Pattern of 1/2/3 credit courses shall be done as per the VTU guidelines.
- BS – MTX(X- Variable) Eg: Core Branches; ME, CV, EEE, ETE, ECE – MTA, Digital Branches: ISE, ISE & AIML – MTB.
- Diploma Mathematics I and II shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.
- Successful completion of the course Diploma Mathematics I shall be indicated as satisfactory in the grade card. Non completion of the courses Diploma Mathematics I shall be indicated as unsatisfactory.

**B.E INFORMATION SCIENCE AND ENGINEERING**
**Choice Based Credit System (CBCS)**
SEMESTER – III

**Advanced Engineering Mathematics - I** (3:1:1) 4
(Common to CSE/ISE/AI&ML)
(Effective from the academic year 2021-22)

| | | | |
|---|---|---|---|
| Course Code | 21MTB31 | CIE Marks | 50 |
| Teaching Hours/Week (L:T:P) | 3:1:1 | SEE Marks | 50 |
| Total Number of Contact Hours | 50 | Exam Hours | 3 Hours |

**Course Objectives:**

This course aims to prepare the students to:

1. Apply the concept of Fourier series, probability distribution and statistical methods to analyze problems arising in Science and Engineering field.
2. Apply the knowledge of interpolation and numerical integration techniques whenever analytical methods fail or become complicated to offer solutions.
3. Apply the concept of Numerical Techniques, and probability distribution to analyze problems arising in Science and Engineering field.

**Module – I**

**Introduction:** Understanding of Transform Calculus, Numerical methods &their applications in Engineering, Economics and Statistics.

**Statistical Methods:** Correlation-Karl Pearson's coefficient of correlation – problems, Regression lines-lines of regression (without proof) –Problems.

**Curve fitting:** Curve fitting by the method of least squares- fitting of the curves of the form, $y = ax + b, y = ax^2 + bx + c$ and $y = ae^{bx}$.

**Time Series Forecasting:** Exponential smoothing, moving average models

**Self-Learning Component:** Fitting of the curves $y = a\,x^b$ and $y = a\,b^x$.

**Lab Session 1:**

1. Determination of polynomial using method of Least Square Curve Fitting.
2. Relation between variables: correlation, Regression.

**(10 Hours)**

**Module – II**

**Finite Differences:** Forward and backward differences, Newton's forward and backward interpolation formulae, Divided differences- Newton's divided difference formula, Lagrange's interpolation formula and inverse interpolation formula (all formulae without proof) - problems.

**Numerical Integration:** Simpson's $(1/3)^{rd}$ and $(3/8)^{th}$ rules, Weddle's rule (without proof) – problems.

**Self-Learning Component:** Trapezoidal rule.

**Lab Session 2:**

1. Numerical solution using Newton's Forward / Backward interpolation formula.
2. Numerical integration using Simpson's One-third rule.

**(10 Hours)**

**Module – III**

**Fourier Series:** Dirichlet's conditions, Fourier Series of periodic functions of period $2\pi$ and arbitrary period. Half range Fourier Series, Practical harmonic analysis over the period $2\pi$.
**Self-Learning Component:** Complex Fourier Series.

**Lab Session 3:**

1. Obtain the Fourier series of a function.
2. Finding Fourier series by practical Harmonic Analysis.

**(10 Hours)**

**Module – IV**

**Probability Distribution:** Random variables (discrete and continuous), probability mass/density functions. Binomial distribution, Poisson distribution, Hypergeometric distribution, Exponential distribution, Normal distributions, Gamma distribution, problems.
**Self-Learning Component –** Uniform distribution
**Lab Session 4:**

1. Fitting the probability distributions: Binomial, Poisson.
2. Fitting the probability distributions: Exponential and Normal distributions.

**(10 Hours)**

**Module – V**

**Joint Probability Distribution:** Joint Probability distribution for two discrete and continuous random variables, marginal distribution, expectation, covariance, correlation coefficient. Conditional probability, Conditional expectation and variance (only for discrete random variable).
**Self-Learning Component** – Joint Probability distribution for discrete multi random variables.
**Lab Session 5:**

1. Fitting the Joint Probability distribution for two discrete random variables.
2. Fitting the Joint Probability distribution for two discrete random variables.

**Summary:** The student will be able to analyze and apply various concepts related to Fourier series, Numerical techniques and Probability distribution.

**(10 Hours)**

**Course outcomes:**

The students will be able to:

**CO1**: Make use of the concepts of method of least squares, correlation and regression analysis to fit a suitable mathematical model for the statistical data.

**CO2**: Apply the knowledge of Numerical Methods in the modeling of various physical and engineering phenomena.

**CO3**: Apply Fourier series to study the behavior of periodic functions arising in wave and heat propagation, signals, and systems.

**CO4**: Analysis various probability distributions occurring in digital signal processing, information theory and design engineering.

**Question paper pattern:**

**Question paper pattern:**

**SEE** will be conducted for 100 marks.

- The question paper will have ten questions. Each question is set for 20 marks.
- There will be 2 questions from each module. Each of the two questions under a module (with a maximum of 3 sub-questions), should have a mix of topics under that module.
- The students have to answer 5 full questions, selecting one full question from each module.

**CIE** will be conducted for 100 marks.

- Three Unit Tests each of **20 Marks** (Duration 01 hour).
- Two assignments each of 10 Marks.
- Two alternate assessment tools (AATs) from the list shall be planned to attain the COs and POs for **20 Marks** (duration 01 hours).
- The sum of three tests, two assignments, and AATs will be out of 100 marks and will be scaled down to 50 marks.

SEMESTER – III

**Constitution of India and Professional Ethics (1:0:0) 1**

(Common to all Branches)

(Effective from the academic year 2021-2022)

| | | | |
|---|---|---|---|
| Course Code | 21CIP32/42 | CIE Marks | 50 |
| Teaching Hours/Week (L:T:P) | 1:0:0 | SEE Marks | 50 |
| Total Number of Lecture Hours | 13 | Exam Hours | 02 |

**Course objectives:**

This course will enable students to

1. Familiarize with the Indian Constitution and have legal knowledge enabling them to take competitive exams and understand complex political issues.
2. Understand engineering ethics and responsibility and raise awareness and consciousness of the issues related to the profession, liability, risk and safety at work place.

**Module – I**

**Preamble:** Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation.

**Introduction and Basic information about the Indian Constitution:**

Introduction, Definition and significance of the Indian Constitution, Historical Background of the Indian Constitution. Framing of the Indian constitution: Role of the Constituent Assembly, Preamble and Salient features of the Constitution of India.

**(2 Hours)**

**Module – II**

**Fundamental Rights, Directive Principles of State Policy and Fundamental Duties:**

Fundamental Rights and its limitations, Directive Principles of State Policy: Importance and its relevance. Fundamental Duties and their significance. Case Studies

**(3 Hours)**

**Module – III**

**Union Administration:**

The Union Executive-The President and The Vice President, The Prime Minister and The Council of Ministers, The Union Legislature -Lok Sabha & Rajya Sabha, The Union Judiciary-The Supreme Court of India and its jurisdiction. **(3 Hours)**

**Module – IV**

**State Administration, Elections, Constitutional Amendments, Emergency Provisions and Special Constitutional Provisions:**

The State Executive-The Governors, The Chief Ministers and The Council of Ministers, The State Legislature- Legislative Assembly and Legislative Council, The State Judiciary- The State High Courts and its jurisdiction.

Elections-Electoral Process in India, Election Commission of India: Powers & Functions, Constitutional Amendments- methods and Important Constitutional Amendments i.e $42^{nd}$, $44^{th}$, $61^{st}$,$74^{th}$, $76^{th}$, $77^{th}$, $86^{th}$ ,$91^{st}$, 100, $101^{st}$, $118^{th}$ , Emergency Provisions-types and its effect, Special Constitutional Provisions for Schedule Castes, Schedule Tribes & Other Backward Classes Women & Children.

**(3 Hours)**

**Module – V**

**Professional Ethics:**

Definition of Ethics, Scope and Aim of Professional and Engineering Ethics, Code of ethics as defined in the Institution of Engineers (India), Responsibilities of Engineers and impediments to responsibilities, Honesty, Integrity and Reliability of Engineers, Risk, Safety and Liability in Engineering, Case Studies.

**(2 Hours)**

**Course outcomes:** The students will be able to:

CO1. Understand and have constitutional knowledge and legal literacy

CO2. Understand Engineering and Professional ethics and responsibilities of Engineers.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks. The same will be reduced to 50 Marks.
- **There shall be 100** MCQs, each carrying 1 mark.
- **CIE** will be announced prior to the commencement of the course.
- 50 marks for test. Average of three tests will be taken and reduced to 25.
- 25 marks for Alternate Assessment Method.

**Textbooks**

1. Durga Das Basu, Introduction to the Constitution of India, Lexis Nexis, 20th Edn, 2011.

**B.E INFORMATION SCIENCE AND ENGINEERING**
**Choice Based Credit System (CBCS)**
SEMESTER – III

**Universal Human Values- I (1:0:0) 1**
(Effective from the academic year 2021-2022)

| | | | |
|---|---|---|---|
| Course Code | 21UHV33 | CIE Marks | 50 |
| Teaching Hours/Week (L: T:P) | 1:0:0 | SEE Marks | 50 |
| Total Number of Lecture Hours | 13 | Exam Hours | 02 |

**Course objectives:**

This introductory course is intended to

1. Develop a holistic perspective based on self-exploration about themselves (human being).
2. Understand harmony in the human being.
3. Strengthening of self-reflection.
4. Develop commitment and courage to act.

**Module – I**

**Preamble:** Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation.

**Introduction to Value Education:** Understanding Value Education; Need and Basic guidelines for Value Education; Scope and Process.

**Self-exploration as the Process for Value Education:** What is self- exploration; Process of self- exploration.

**Case study and Group Discussion** **(2 Hours)**

**Module – II**

**Basic Human Aspirations:** Continuous happiness and prosperity; Exploring happiness and prosperity; Methods to Fulfill the Basic Human Aspirations; Need for right understanding; Relationship and Physical Facilities.

**Case study and Group Discussion** **(2 Hours)**

**Module – III**

**Understanding human being as co-existence of the self and the Body**: Understanding and distinguishing between the Needs of the Self and the Body- Quantitative, Qualitative, Knowing, Assuming, Recognizing and fulfilling in self and in body.

**Case study and Group Discussion** **(3 Hours)**

**Module – IV**

**Harmony in self:** Understanding self; Activities in self; Power of expectation, thought and desire; Conflicts or contradictions in self as a result of pre-conditioned desire; Realization and Understanding.

**Case study and Group Discussion** **(3 Hours)**

**Module – V**

**Harmony with Body:** Harmony of self with the body-Sanyama and Svasthya; Understanding and living with Sanyama; Nurturing of the body; Protection of the body; Right utilization of the body; Correct appraisal of our physical needs.

**Case study and Group Discussion** **(3 Hours)**

**Course outcomes: The students will be able to:**

1. Understand the role of value education, self-exploration and harmony in self and with body.
2. Distinguish between values and skills, Self and the Body, Intention and Competence of an individual.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks. The same will be reduced to 50 Marks.
- **There shall be 100** MCQs, each carrying 1 mark.
- **CIE** will be announced prior to the commencement of the course.
- 50 marks for test. Average of three tests will be taken and reduced to 25.
- 25 marks for Alternate Assessment Method.

**Choice Based Credit System (CBCS)**
SEMESTER – III

**Internship - I** (0:0:0:2) 2
(Effective from the academic year 2021-22)

| | | | |
|---|---|---|---|
| Course Code | 21INT34 | CIE Marks | 100 |
| Teaching Hours/Week (L:T:P:PW) | 0:0:0:4 | SEE Marks | - |

**Schedule:**

- During the intervening vacation of II and III semester for students admitted to I semester.
- During the intervening vacation of III and IV semester for lateral entry diploma students admitted to III semester.

**Course Outcomes:**

**CO1.** Acquire academic/ career/ personal overall skill/ knowledge development.
**CO2.** Perceive ample opportunities for professional growth and achievement with relevance to society and environment.
**CO3.** Expose to real job world environment and gain practical knowledge with experience.
**CO4.** Build leadership qualities, teamwork, collaborations, cooperation, and facility in using virtual workspace.
**CO5.** Intensify creativity, artistry, curiosity, imagination, innovation and personal expression.
**CO6.** Write report in technical work/ project with presentation.

**List of Activities – A Proposal**

1. Activities concerned with the works of Indian scholars like Charaka and Susruta, Aryabhata, Bhaskaracharya, Chanakya, Madhava, Patanjali, Panini and Thiruvalluvar, among numerous others
2. Activities such as training with higher Institutions or Soft skill training organized by Training and Placement Cell of the respective institutions.
3. Contribution at incubation/ innovation /entrepreneurship cell of the institute.
4. Participation in conferences/ workshops/ competitions etc.
5. Learning at Departmental Lab/Tinkering Lab/ Institutional workshop.
6. And working for consultancy/ research project with-in the institute.
7. Learning MS Word, Excel, Microsoft equations, MS drawing tools, MS Power point, etc.
8. Coding.
9. Mini projects using commercially available assembled electronic products.
10. Debates, quizzes, and group discussions: On technical topics already studied (both in Kannada and English).
11. Essay competitions: Both in Kannada and English on technical topics already studied.
12. Survey and study of published literature on the assigned topic: Technical paper survey, Preparation of synopsis. Exposure to technical paper publications.
13. Athletics and Sports.
14. Photography.
15. Cultural activities; Drama, Dance,
16. Short film production: Contemporary aspects, Technical aspects etc.
17. Music Competition (Vocal and Instrumental): Classical – Indian and western, Sugamasangeetha (Bhava Geethegalu), Folk songs, film songs etc.
18. Internship in Disaster Management.
19. Solar energy connected activities that help common man.
20. Working with Smart City Administration.
21. Hackathon (it is a design sprint-like event in which computer programmers and others involved in software development, including graphic designers, interface designers, project managers, and others, often including domain experts, collaborate intensively on software projects).
22. Industrial Safety, Fire Safety, Electrical Safety, Chemical Process Safety, Food Safety etc.
23. Internship and project work in Indian Knowledge System related Areas/Topics.
24. Industrial visits/Small Scale Industries/ Factories/ Cottage Industries/substation visit/short project tour, etc., and submission of report.

**CO-PO Mapping**

**Choice Based Credit System (CBCS)**
SEMESTER – III

**Data Structure and Applications (2:2:0) 3**
(Effective from the academic year 2021-2022)

| | | | |
|---|---|---|---|
| Course Code | 21CS35 | CIE Marks | 50 |
| Teaching Hours/Week (L:T:P) | 2:2:0 | SEE Marks | 50 |
| Total Number of Contact Hours | 26(L) + 26(T) | Exam Hours | 03 |

**Course Objectives:**

This course will enable students to:

1. Explain fundamentals of data structures and their applications essential for programming/problem Solving.
2. Utilize an appropriate data structure like Stack, Queues, Lists, Trees and Graphs to solve a given problem.
3. Demonstrate sorting and searching algorithms.

## Module – I

**Preamble:** Data Structures are a specialized means of organizing and storing data in computers in such a way that we can perform operations on the stored data more efficiently. Data structures have a wide and diverse scope of usage across the fields of Computer Science and many other fields of Engineering. Data Structures are the main part of many computer science algorithms as they enable the programmers to handle the data in an efficient way. It plays a vital role in enhancing the performance of a software.

**Introduction:** Significance and scope of Data Structures, Data Structures and Algorithms in Economic growth of Nation, Impact of Data Structures and Algorithms on societal problems, sustainable solutions, Career perspective of Data Structures and Algorithms, current innovations in Data Structures.

**Data Structures:** Definition, Classification and Operations, Dynamic memory allocation, Self-referential structures.

**Arrays:** Introduction, Linear arrays, Representation of linear arrays in memory, Traversing linear arrays, Inserting and Deleting, Bubble sort, Linear Search, Binary Search, Dynamic Arrays, Multidimensional arrays, Sparse matrices, Polynomials.

**(11 Hours)**

## Module – II

**Stacks:** Definition, Stack Operations, Array Representation of Stacks, Stacks using Dynamic Arrays.

**Stack Applications:** Polish notation, Infix to postfix conversion, evaluation of postfix expression, Multiple Stacks and Queues. Programming Examples.

**(10 Hours)**

**Module – III**

**Queues:** Definition, Array Representation, Queue Operations, Circular Queues, Circular queues using Dynamic arrays, De-queues, Priority Queues.

**Recursion** - Factorial, GCD, Fibonacci Sequence, Tower of Hanoi, Ackerman's function.

**(10 Hours)**

**Module – IV**

**Linked Lists:** Definition, Representation of linked lists in Memory, Memory allocation; Garbage Collection.

**Linked list operations:** Traversing, Searching, Insertion, and Deletion. Doubly Linked lists, Circular linked lists, and header linked lists. Linked Stacks and Queues. Applications of Linked lists – Polynomials, Sparse matrix representation. Programming Examples.

**(10 Hours)**

**Module – V**

**Trees:** Terminology, Binary Trees, Properties of Binary trees, Array and linked Representation of Tree.

**Binary Trees:** Binary Tree Traversals - Inorder, postorder, preorder; Additional Binary tree operations. Binary Search Trees – Definition, Insertion, Deletion, Traversal, Searching, Application of Trees-Evaluation of Expression, Programming Examples.

**Graphs:** Definitions, Terminologies, Matrix and Adjacency List Representation Of Graphs, Depth First Search.

**Hashing:** Definition, Hashing Functions, Hash Table, Separate chaining, Linear Probing.

**Recap:** Summary of the Course

**(11 Hours)**

**Course Outcomes:**

The students will be able to:

**CO1** : Illustrate different types of linear data structures, its operations and algorithms to solve a given problem.

**CO2** : Illustrate different types of non-linear data structures, its operations and algorithms to solve a given problem.

**CO3** : Examine any given problem, recommend and implement solutions using suitable data structures.

**CO4** : Design and implement applications using suitable data structures.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- **Part A:** First question with 20 MCQs carrying 1 mark each.
- **Part B:** Each full question is for 16 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three test will be taken.

**Text books:**

1. Ellis Horowitz and Sartaj Sahni, Fundamentals of Data Structures in C, Universities Press, 2nd edition, 2019
2. Seymour Lipschutz, Data Structures, Schaum's Outline Series, 1st Edition, 2014.

**References:**

1. Gilberg & Forouzan, Data Structures: A Pseudo-code approach with C, Cengage Learning, 2nd edition, 2014.
2. Jean-Paul Tremblay & Paul G. Sorenson, An Introduction to Data Structures with Applications, McGraw Hill, 2nd Edition, 2013.

**B.E INFORMATION SCIENCE AND ENGINEERING**
**Choice Based Credit System (CBCS)**
SEMESTER – III

**Computer System Design (3:0:0) 3**
(Effective from the academic year 2021-2022)

| | | | |
|---|---|---|---|
| Course Code | 21CS36 | CIE Marks | 50 |
| Teaching Hours/Week (L: T:P) | 3:0:0 | SEE Marks | 50 |
| Total Number of Contact Hours | 40 | Exam Hours | 03 |

**Course Objectives:**

This course will enable students to:

1. Read and Write Optimize Boolean equations for logic circuits.
2. Design combinational and sequential circuits using MSI components.
3. Simulate and experimentally validate sequential logic circuits.
4. Understand the structure, function, organization and architecture of modern day computing systems.
5. Examine the internal architecture and organization of the processor with an extended discussion of computer arithmetic and the instruction set architecture.

**Module – I**

**Preamble:** Computer System Design course is to familiarize with concepts, design, and practical use of digital circuits and components of computer system. Digital circuits are used in designing Microcontrollers, Microprocessor, Embedded system projects and exposed to hardware design which reflects the current industry requirements.

**Simplification of Boolean Expressions:** Karnaugh's Map- Using Karnaugh Maps to obtain minimal Expressions for Boolean functions, Simplification by Quine-McClusky Method, The Entered Variable Map Technique. Data Processing Circuits: Multiplexers, Demultiplexers, three state buffers, BCD to decimal decoders, seven segment decoders, Encoders, Exclusive or gates, Parity generator. Magnitude Comparator.

**(09 Hours)**

**Module – II**

**Flip-Flops and Applications:** The Basic Bistable Elements, Latches, Timing Considerations, Master-Slave Flip-Flops, Edge – Triggerred Flip Flops, Characteristics Equations, Registers-SISO, SIPO, PISO, PIPO and Universal Register, Applications of Registers.

**(07 Hours)**

**Module – III**

**Counters:** Asynchronous Counters, Synchronous Counters, Design of sequential Circuits. State Transition Diagram, State Synthesis Table, Design Equation and Circuit Diagram, Analysis and design of Asynchronous sequential Circuits.

**(07 Hours)**

**Module – IV**

**Computer System Components and Interconnections**: Introduction, Organization and Architecture, Structure and Function, Evolution of the Intel x86 Architecture, Performance Issues, Top-Level View of Computer Function and Interconnection, Input/Output: External Devices, I/O Modules, Programmed I/O, Interrupt Driven I/O, DMA

**Cache Memory Organization:** Computer Memory System Overview, Cache Memory Principles, Elements of Cache Design.

**Internal and External memory:** Internal Memory Technology, Semiconductor Main Memory, Error Correction, Advanced DRAM Organization.

**(08 Hours)**

**Module – V**

**Central Processing Unit** - Computer Arithmetic: The Arithmetic and Logic Unit (ALU), Integer Representation, Integer Arithmetic, Floating-Point Representation, Floating-Point Arithmetic.

**Micro-operations and Control Unit:** Control Unit Operation - Micro-operations, Control of the Processor, Hardwired Implementation, Micro programmed Control - Basic Concepts.

**Recap**/Summary of the Course

**(09 Hours)**

**Course Outcomes:**

The Students should be able to

**CO1**: Discuss the basic concepts of digital system components.

**CO2**: Apply the various minimizations methods to realize the digital circuits.

**CO3:** Analyze the functioning of various units in digital systems.

**CO4**: Design the solutions for real time embedded applications.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- **Part A:** First question with 20 MCQs carrying 1 mark each.
- **Part B:** Each full question is for 16 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three test will be taken.
- 25 marks for Alternate Assessment Method.

**B.E INFORMATION SCIENCE AND ENGINEERING**
**Choice Based Credit System (CBCS)**
SEMESTER – III

**Discrete Mathematical Structures (3:0:0) 3**
(Effective from the academic year 2021-2022)

| | | | |
|---|---|---|---|
| Course Code | 21CS37 | CIE Marks | 50 |
| Teaching Hours/Week (L: T:P) | 3:0:0 | SEE Marks | 50 |
| Total Number of Contact Hours | 40 | Exam Hours | 03 |

**Course Objectives:**

This course will enable students to:

1. Understand an intense foundational introduction to fundamental concepts in discrete mathematics.
2. Interpret and solve the language associated with logical reasoning, relations, and functions.
3. Depict mathematical induction to analyzes recursive and non-recursive concepts
4. Verify the graph theory fundamental concepts with respect to various real time problems.

**Module – I**

**Preamble:** Discrete Mathematics course introduces students to the mathematics of discrete structures which build the mathematical foundation of Information Technology. Discrete mathematics has wide variety of application in problem analysis, decision making and provides adequate basics for the IT students who will be taking advanced courses like Security, Machine Learning and the Theory of Computing. The concepts of counting, mathematical induction, functions, relations, and graph theory provides an applied introduction to model mathematical concepts to the real word applications.

**Introduction:** Significance and scope of discrete mathematics in economic growth of nation, Impact of discrete mathematics on societal problems, sustainable solutions, Career perspective of discrete mathematics, current innovations in discrete mathematics.

**Fundamental Principles of Counting:** Overview, The rule of sum and product, Permutations, Combinations, The binomial theorem, Multinomial Theorem, and Combinations with repetition.
**Set Theory:** Sets and Subsets, Set operations, Laws of set theory.
**The Principles of Inclusion and Exclusion:** Generalization of the principle, Derangements-Nothing is in its right place.

**(08 Hours)**

**Module – II**

**Fundamentals of Logic:** Basic connectives and Truth tables, Tautologies, Logical Equivalence: The laws of logic, Logical implications, Rules of inference. Open statement, Quantifiers, and Predicate Calculus: Definition and the use of Quantifiers, Definitions, and the proofs of theorems.

**(08 Hours)**

**Module –III**

**Relations:** Properties of relations, Equivalence relations, Partitions, Partial orders, Hasse diagrams, and Extremal elements in posets.

**Functions:** Types of function, Properties of functions, The pigeonhole principle, Composition of functions, Inverse functions and Invertible Functions.

**(08 Hours)**

**Module – IV**

**Mathematical Induction, Recursive Definitions and Recurrence Relations:**
Method of mathematical induction, Recursive definition, Rook polynomials, and Arrangements with forbidden positions. First order linear recurrence relation-Formulation problems and examples. Second order linear homogeneous recurrence relations with constant coefficients.

**(08 Hours)**

**Module – V**

**Introduction to Graph Theory:** Definitions and Examples, Subgraphs-Spanning subgraph, Induced subgraph, Special subgraphs, Complements of a subgraph, and Graph of isomorphism, Vertex degree, Euler trails and Circuits, Shortest path.

**Trees:** Definitions, Properties and Examples, Routed Trees- Binary tree, Balanced tree, Full binary Tree, Sorting-Merge sort, Weighted trees, Optimal tree and Prefix codes.

**Recap**/Summary of the Course

**(08 Hours)**

**Course Outcomes:**

The Students should be able to

CO1: Outline the fundamental concepts of discrete mathematical structures.

CO2: Apply the concepts of discrete mathematical structures for effective computation and relating problems in Engineering domain.

CO3: Analyze the concepts of discrete mathematics to various fields of Engineering.

CO4: Design mathematical solutions for solving various real time problems.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- **Part A:** First question with 20 MCQs carrying 1 mark each.
- **Part B:** Each full question is for 16 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three test will be taken.
- 25 marks for Alternate Assessment Method.

**B.E INFORMATION SCIENCE AND ENGINEERING**
**Choice Based Credit System (CBCS)**
SEMESTER – III

**Data Structures and Applications Laboratory (0:0:2) 1**
(Effective from the academic year 2021-2022)

| | | | |
|---|---|---|---|
| Course Code | 21CSL38A | CIE Marks | 50 |
| Teaching Hours/Week (L: T:P) | 0:0:2 | SEE Marks | 50 |
| Total Number of Contact Hours | 26 | Exam Hours | 3 |

**Course Objectives:**

This course enables students to:

1. Develop linear data structures and their applications such as stacks, queues and lists.
2. Develop non-linear data structures and their applications such as trees and graphs sorting and searching algorithms.

**Descriptions:** Design, develop, and implement the specified Data Structure as given in the list given below using C Language under LINUX /Windows environment.

**Programs List**

| | |
|---|---|
| 1. | Design, Develop and Implement a menu driven Program in C for the following Array operations<br>a. Creating an Array of N Integer Elements<br>b. Display of Array Elements with Suitable Headings<br>c. Inserting an Element (ELEM) at a given valid Position (POS)<br>d. Deleting an Element at a given valid Position(POS)<br>e. Exit.<br>Support the program with functions for each of the above operations. |
| 2. | Design, Develop and Implement a menu driven Program in C for the following operations on STACK of Integers (Array Implementation of Stack with maximum size MAX)<br>a. Push an Element on to Stack<br>b. Pop an Element from Stack<br>c. Demonstrate Overflow and Underflow situations on Stack<br>d. Display the status of Stack<br>e. Exit<br>Support the program with appropriate functions for each of the above operations. |
| 3. | Design, Develop and Implement a Program in C for converting an Infix Expression to Postfix Expression. Program should support for both parenthesized and free parenthesized expressions with the operators: +, -, *, /, %( Remainder), ^(Power) and alphanumeric operands. |
| 4. | Design, Develop and Implement a Program in C for evaluation of Suffix expression with single digit operands and operators: +, -, *, /, %, ^. |

| | |
|---|---|
| 5. | Design, Develop and Implement a menu driven Program in C for the following operations on Circular QUEUE of integers (Array Implementation of Queue with maximum size MAX)<br>a. Insert an Element on to Circular QUEUE<br>b. Delete an Element from Circular QUEUE<br>c. Demonstrate Overflow and Underflow situations on Circular QUEUE<br>d. Display the status of Circular QUEUE<br>e. Exit<br>Support the program with appropriate functions for each of the above operations. |
| 6. | Design, Develop and Implement a menu driven Program in C for the following operations on Double Ended QUEUE of integers (Array Implementation of Queue with maximum size MAX)<br>a. Perform Insertion / Deletion at front of QUEUE<br>b. Perform Insertion / Deletion at rear of QUEUE<br>c. Display the status of Circular QUEUE<br>d. Exit<br>Support the program with appropriate functions for each of the above operations. |
| 7. | Design, Develop and Implement a menu driven Program in C for the following operations on Singly Linked List (SLL) of Student Data with the fields: USN, Name, Branch, Sem, PhNo<br>a. Create a SLL of N Students Data by using front insertion.<br>b. Display the status of SLL and count the number of nodes in it<br>c. Perform Insertion / Deletion at End of SLL<br>d. Perform Insertion / Deletion at Front of SLL(Demonstration of stack) |
| 8. | Design, Develop and Implement a menu driven Program in C for the following operations on Doubly Linked List (DLL) of Employee Data with the fields: SSN, Name, Dept, Designation, Sal, PhNo<br>a. Create a DLL of N Employees Data by using end insertion.<br>b. Display the status of DLL and count the number of nodes in it<br>c. Perform Insertion and Deletion at End of DLL<br>d. Perform Insertion and Deletion at Front of DLL<br>e. Demonstrate how this DLL can be used as Double Ended Queue<br>f. Exit. |
| 9. | Design, Develop and Implement a menu driven Program in C for the following operations on Binary Search Tree (BST) of Integers<br>a. Create a BST of N Integers: 6, 9, 5, 2, 8, 15, 24, 14, 7, 8, 5, 2<br>b. Traverse the BST in Inorder, Preorder and Post Order<br>c. Search the BST for a given element (KEY) and report the appropriate message<br>d. Exit. |

| | |
|---|---|
| 10. | Design, Develop and Implement a Program in C for the following operations on Graph(G) of Cities.<br>a. Create a Graph of N cities using Adjacency Matrix.<br>b. Print all the nodes reachable from a given starting node in a digraph using any traversal method. |

**Course Outcomes:**

The student should be able to:

CO1: Write programs to implement different types of data structures.

CO2: Demonstrate the working of different types of data structures

**Assessment Patterns**

- **CIE (50 marks)**
- **SEE(50 marks)**

**Conduct of Practical Examination:**

All laboratory experiments are to be included for practical examination.

Experiment distribution

- For questions having only one part: Students are allowed to pick one experiment from the lot and are given equal opportunity.
- Change of experiment is allowed only once and marks allotted for procedure part to be made zero.

**Marks Distribution :**

For questions having only one part – Procedure + Execution + Viva-Voce: =100 Marks (will be reduced to 50 Marks).

**B.E INFORMATION SCIENCE AND ENGINEERING**
**Choice Based Credit System (CBCS)**
SEMESTER – III

**Computer System Design Laboratory (0:0:2) 1**
(Effective from the academic year 2021-2022)

| | | | |
|---|---|---|---|
| Course Code | 21CSL38B | CIE Marks | 50 |
| Teaching Hours/Week (L:T:P) | 0:0:2 | SEE Marks | 50 |
| Total Number of Contact Hours | 26 | Exam Hours | 3 |

**Course objectives:**

This course will enable students to:

1. Understand the Basics of digital electronics and able to design basic logic circuits
2. Familiarize the concepts of Combinational circuits.
3. Design experiments using the concepts of flip-flops, registers and counters

To design the hardware using Verilog /VHDL based design practices and introduce students to a disciplined use of industry-based practices for writing models to ensure that a behavioral description can be synthesized into physical hardware, and that the behavior of the synthesized circuit will match that of the behavioral description.

**Lab Experiments**

1. Introduction to VHDL.
2. Realize the truth tables of half adder, full adder half subtractor and full subtractor and simulate the same using VHDL.
3. Given a 4-variable logic expression, simplify it using Entered Variable Map and realize the simplified logic expression using 8:1 multiplexer IC and simulate the same using VHDL.
4. Design and realization Two Bit Magnitude Comparator, binary to grey and grey to binary using Basic Gates
5. Realize a J-K Master / Slave Flip-Flop using NAND gates and verify its truth table and simulate the same using VHDL.
6. Design and implement a mod-n (n<=8) synchronous up counter using J-K Flip-Flop ICs and demonstrate its working. Simulate the same using VHDL.
7. Design and implement an asynchronous counter using decade counter IC to count up from 0 to n (n<=9) and demonstrate on a 7-segment display (using IC- 7447).
8. Design an 8-bit ALU. - Design a ripple carry adder.

**Course Outcomes:** The students will be able to:

1. Understand and explore the basic concepts of logic families, Boolean algebra, combinational and sequential circuits.
2. Apply the concepts of simplification to realize the digital circuits.
3. Analyze and evaluate different techniques to realize the digital circuits.
4. Design and develop digital circuits for various applications

**Question paper pattern:**

- **CIE (50 marks)**
- **SEE(50 marks)**

**Conduct of Practical Examination:**

All laboratory experiments are to be included for practical examination.
Experiment distribution

- For questions having only one part: Students are allowed to pick one experiment from the lot and are given equal opportunity.
- For questions having part A: Students are allowed to pick one experiment from part A.
- Change of experiment is allowed only once and marks allotted for procedure part to be made zero

**Marks Distribution :**
For questions having only one part – Procedure + Execution + Viva-Voce: =100 Marks
(Will be reduced to 50 Marks).

**B.E INFORMATION SCIENCE AND ENGINEERING**
**Choice Based Credit System (CBCS)**

| Teaching Hours/Week (L:T:P) | 0:0:2 | SEE Marks | 50 |
| Total Number of Contact Hours | 26 | Exam Hours | 3 |

**Course Objectives:**

This course will enable students to:

1. Illustrate the Semantic Structure of HTML and CSS
2. Compose forms and tables using HTML and CSS
3. Design Client-Side programs using JavaScript and Server-Side programs using PHP
4. Infer Object Oriented Programming capabilities of PHP

**Lab Experiments: Part-A**
**The corresponding theory should be done prior to these lab programs.**

**Preamble**: This course is intended to teach the basics involved in publishing content on the World Wide Web. This includes the fundamentals of how the Internet and the web function, and a general grounding introduction to more advanced topics such as programming and scripting. This will also expose students to the basic tools and applications used in Web technologies.

1. Write a JavaScript to design a simple calculator to perform the following operations: sum, product, difference and quotient.
2. Write a JavaScript code that displays text "TEXT-GROWING" with increasing font size in the interval of 100ms in RED COLOR, when the font size reaches 50pt it displays "TEXTSHRINKING" in BLUE color. Then the font size decreases to 5pt.
3. Develop and demonstrate a HTML5 file that includes JavaScript script that uses functions for the following problems:
    a. Parameter: A string
    b. Parameter: A number
    c. Output: The number with its digits in the reverse order
    d. Output: The position in the string of the left-most vowel.
4. Design an XML document to store information about a student in an engineering college affiliated to VTU. The information must include USN, Name, and Name of the College, Programme, Year of Joining, and email id. Make up sample data for 3 students. Create a CSS style sheet and use it to display the document.
5. Write a PHP program to keep track of the number of visitors visiting the web page and to display this count of visitors, with proper headings.
6. Write a PHP program to display a digital clock which displays the current time of the server.
7. Write the PHP programs to do the following:
    a. Implement simple calculator operations.
    b. Find the transpose of a matrix.
    c. Multiplication of two matrices.
    d. Addition of two matrices.

8. Write a PHP program named states.py that declares a variable states with value "Mississippi Alabama Texas Massachusetts Kansas". write a PHP program that does the following:
    a. Search for a word in variable states that ends in xas. Store this word in element 0 of a list named states List.
    b. Search for a word in states that begins with k and ends in s. Perform a case-insensitive comparison. [Note: Passing re.Ias a second parameter to method compile performs a case-insensitive comparison.] Store this word in element1 of states List.
    c. Search for a word in states that begins with M and ends in s. Store this word in element 2 of the list.
    d. Search for a word in states that ends in a. Store this word in element 3 of the list.
9. Write a PHP program to sort the student records which are stored in the database using selection sort.

**Mini Project: Part -B**

Develop a web application project using the languages and concepts learnt in part A with a good look and feel effect. You can use any web technologies and frameworks and databases.

**Note**:

1. In the examination each student picks one question from part A.
2. A team of two students must develop the mini project. However during the examination, each student must demonstrate the project individually.
3. The team must submit a brief project report (15-20 pages) that must include the following
    a. Introduction
    b. Requirement Analysis
    c. Software Requirement Specification
    d. Analysis and Design
    e. Implementation
    f. Testing

**Course Outcomes:** The students will be able to:

**CO1:** Analyze a web page's elements and attributes.
**CO2:** Design dynamic web pages using JavaScript
**CO3:** Develop a web application project using any web framework and database.

**Lab Exam Pattern**

1. All laboratory experiments from part A are to be included for practical Examination.
2. Mini project has to be evaluated for 40 Marks.
3. Report should be prepared in a standard format prescribed for project work.
4. Students are allowed to pick one experiment from the lot.
5. Strictly follow the instructions as printed on the cover page of answer script.
6. Marks distribution:
    a) Part A: Procedure + Conduction + Viva: **09 + 42 +09 =60 Marks**
    b) Part B: Demonstration + Report + Viva voce: **20+14+06 = 40 Marks**

**Change of experiment is allowed only once and marks allotted to the procedure part to be made zero**.

**B.E INFORMATION SCIENCE AND ENGINEERING**
**Choice Based Credit System (CBCS)**
SEMESTER – III

**Diploma Mathematics- I (0:0:0) NIL**
COMMON TO ALL BRANCHES
(Effective from the academic year 2021-22)

| | | | |
|---|---|---|---|
| Course Code | 21DIP31A | CIE Marks | 100 |
| Teaching Hours/Week (L:T:P) | 3:0:0 | SEE Marks | - |
| Total Number of Contact Hours | 30 | Exam Hours | 3 |

**Course Objectives:**

This course will enable students to:

1. To enable students to apply knowledge of mathematics in various engineering fields by making them to learn the basic tools of vector differentiation, calculus and elementary Linear Algebra.
2. To familiarize the important tools of Differential and Integral Calculus required to analyze the engineering problems.

**Module – I**

**Introduction:** Understanding the importance of the study of Complex Trigonometry, Calculus, Linear algebra and its applications in the field of Science, Engineering and Economics.

**Differential Calculus-I: Differentiation:** Polar curves: angle between the radius vector and tangent, angle between two curves, pedal equation-problems; Maclaurin's series of single variable. **(6 Hours)**

**Module – II**

**Differential Calculus-II:** Partial differentiation, Total derivatives-differentiation of composite functions, Jacobians-simple problems. **(6 Hours)**

**Module – III**

**Vector Differentiation:** Velocity and acceleration of a particle moving on a space curve. Scalar and vector point functions. Gradient, Divergence, Curl-simple problems. Solenoidal and irrotational vector fields-Problems. **(6 hours)**

**Module – IV**

**Linear Algebra:** Introduction - Rank of matrix by elementary row operations - Echelon form. Gauss elimination method and approximate solution by Gauss-Seidel method. Eigen values and Eigen vectors of a square matrix of 2×2 & Rayleigh's power method - problems. **(6 hours)**

**Module – V**

**Integral Calculus:** Reduction formulae for $\int Sin^n x dx$, $\int Cos^n x dx$ (proofs with limits between 0 and π/2), $\int Sin^m x Cos^n x dx$ (m & n are positive integers) (proof without limits) and problems on these Reduction formulae with limits. Double and triple integration-Simpleexamples.

**Recap**/Summary of the Course**.**

**(6 hours)**

**Course outcomes:**

The students will be able to:

**CO1**: Use derivatives to calculate rate of change of functions of a single and multivariate

variable.

**CO2**: Analyze position, velocity and acceleration in two and three dimensions of vector Valued functions.

**CO3**: Learn techniques of integration including the evaluation of double and triple integrals.

**CO4:** Solve system of Linear equations by using Matrix Algebra.

**Question paper pattern:**

**CIE** will be conducted for 100 marks.

- Three Unit Tests each of **20 Marks** (Duration 01 hour).
- Two assignments each of 10 Marks.
- Course Seminar suitably planned to attain the COs and POs for 20 Marks (Duration 01 hour).
- The sum of three tests, two assignments, and a seminar will be out of 100 marks. The student shall secure a minimum of 40% of marks of the course to qualify and become eligible for the award of a degree.
