

# 2021

## OPEN COURSE REPORT

**BMS** INSTITUTE OF TECHNOLOGY AND MANAGEMENT

Avalahalli, Doddaballapur Main Road, Bengaluru - 560064

## Report on Open course 2020-21

**Preamble:** Programme Outcomes (POs) are the accomplishments of graduates of a programme immediately after their graduation. POs are formulated broadly based on knowledge, skill and attitude. Knowledge and skills are imparted through the curriculum. In principle, the curriculum, pedagogy and assessment should support the attainment of this set of outcomes in order to make the programme a truly outcome-based one.

*Curriculum mapping* is a tool for checking the extent to which the outcomes are achieved. A curriculum mapping can be conceptualised as an analysis of the provision of opportunities for learning in a curriculum in relation to the curriculum's intended learning outcomes. By constructing a curriculum map, you will have an overview of how far and where in your programme each intended outcome is being addressed. We can then determine whether the learning opportunities provided are sufficient and in appropriate sequence so that adjustments can be made accordingly.

**Value Added Programs / Open Courses:** These are additional (over and above the curriculum) courses where the faculty/department can offer to bridge the gap found in the curriculum. These courses add value to the existing courses which enable the students acquire all the graduate attributes (POs) to become successful professionals. Therefore open course conduction for this semester as per Calendar of events was decided between 1.6.2021 to 5.06.2021.

### I. Initiation:

There may be some gaps in the curriculum prescribed by the university. Hence, identifying the gaps based on Programme Outcomes (POs) /Graduate Attributes (GAs) of the UG/PG programme was taken up. The PAC (Programme Assessment Committee) of the department was asked to adopt the following procedure for identification of gaps and to decide the Value-Added Programmes / Open courses (VAPs):

- The departments (PAC) to discuss the *additional learning* requirements (Open Courses) for the students/representatives of each semester to bridge the gaps of curriculum.
- Programme Assessment Committee (PAC) to hold the meetings with the faculty members to decide or identify the required VAPs/Open Courses.
- PAC to identify the appropriate resource persons / experts to teach the value-added programmes/Open courses
- Approval of the *additional learning* requirements (Courses) by Internal Quality Assurance Cell (IQAC) / Principal to ensure quality is essential.

### II. Implementation of Open-Course(Instruction given to the Departments):

- Depending on the nature of the course, the teaching methodology may be adopted.

# BMS INSTITUTE OF TECHNOLOGY AND MANAGEMENT

Avalahalli, Doddaballapur Main Road, Bengaluru - 560064

## OPEN COURSE 2020-2021 (EVEN SEM)

June 1-5, 2021

- Minimum of 25 hours should be engaged (with Maximum hands-on sessions).
- 50% of the experts / resource persons must be from Industry(external). Remaining 50% from the hosting department (Internal). Remuneration/TA for external experts may be paid as per the institutional norms. There shall be no remuneration for internal experts.
- There shall be minimum of 10 students and maximum of 60 students.
- Information about the course must be notified to all the students of the institute well in advance.
- The interested faculty members of the department/institute may be attended.

### Note:

- Each department to identify and nominate the coordinator (Faculty member) for Open Courses.
- Open Course is made mandatory for all 2<sup>nd</sup> and 3<sup>rd</sup> year students of BMSIT&M and it's the responsibility of respective HODs to motivate the students to register for Open Course.
- Registration is through ONLINE only. Maximum permissible number of students for each course is 60.

Following procedure were asked to follow in conducting VAPs/Open Courses:

- Request letter / mail along with the course contents of the Open Course from the department to the expert/resource person shall reach at least two weeks prior to the event.
- Receiving the acceptance from the Expert / Resource Person with his requirements (Lab/ICT).
- HoDs to arrange the required lab facilities / Infrastructure.
- Share the contents of the course with the students well in advance.

### III. Impact Analysis to be done:

- Quiz/Assignment/Test shall be conducted on 5<sup>th</sup> day (Saturday) of the Programme, and the results must be considered for PO attainment of the programme.
- Feedback from the students on the quality of the course delivery must be taken.

Note: All the supporting documents of each phase (Initiation, Implementation and Impact Analysis) must be maintained in the Department.

### SCHEDULE of the Open-course Execution:

- Conduction of PAC meeting to identify the gaps (To decide the Courses): 24.5.2021
- Identification of Courses and preparation of Course Contents: 25.5.2021

June 1-5, 2021

- Define the Course Outcomes (COs) and mapping to POs: 25.5.2021
- Identification of resource Persons (Industry): 27.05.2021
- Duration of Conduction: 1.6.2021 - 5.6.2021
- Assessment and Evaluation (Test/Quiz and Feedback): 5.6.2021
- Online Registration Opens on: 27.05.2021
- Registration Fee (decided by the Department): 29.5.2021

### Note:

- Upon successful completion of the Course, the Certificates shall be issued to the students who have scored at least 60% of the marks.
- The excess amount remained after the event shall be utilised for the Departmental Tech-Fest.

No. of Courses to be offered by the departments were decided as follows:

Department	Intake (IV/ VI) Semester	No. of Open Courses (at least)
Electronics & Communication Engineering	180	6
	180	
Computer Science & Engineering	180	9
	180	
Mechanical Engineering	60	2
	60	
Electronics & Telecommunication Engineering	60	2
	60	
Electrical & Electronics Engineering	60	2
	60	
Information Science & Engineering	120	5
	180	
Civil Engineering	60	2
	60	
Master of Computer Applications	60	2
	60	
Artificial Intelligence & Machine Learning	-	1
Physics	-	1
Chemistry	-	1
Mathematics	-	1

**List of Open Course offered and Registered by participants**

Sl no.	Dept	Open Course Title	Registrations	Coordinator name
1	AI&ML	<i>Deep Learning with Python</i>	60	Dr. Vishwa Kiran S
2	CHEM	<i>Applies Design thinking and NANO Research</i>	17	Dr. Jyoti Roy Choudhuri
3	CSE	<i>Cyber Security and Block Chain Technology</i>	60	Dr. Anjan Krishnamurthy
4	CSE	<i>Build Instagram in 5 Days-Full Stack Web Development</i>	60	Dr. Sunanda Dixit
5	CSE	<i>C programming for placement</i>	60	Prof. A. Mari Kirthima
6	CSE	<i>Object Oriented Programming with Java for Industry</i>	60	Prof. Anand R, Prof.Jagadish .P, Prof. Srivani
7	CSE	<i>Machine Learning for Beginners</i>	48	Dr. HemaMalini B H
8	CSE	<i>Project and Finance Management</i>	60	Prof. Rajesh N V
9	CSE	<i>Python with Machine learning</i>	60	Dr. HemaMalini B H
10	CSE	<i>Full Web stack development</i>	33	Dr. Sunanda Dixit

30	MECH	<i>Introduction to Computational Fluid Dynamics</i>	43	Dr. Avinash
31	MECH	<i>Data Analysis using Excel</i>	61	Dr. Keerthi Kumar N, Dr. Madhu M C
32	PHY	<i>Materials for Devices: An idea to Engineering Start-Ups</i>	8	Dr. C. Kavitha, Dr. N. Dhananjaya

We are happy to inform that the total participants registered for various courses were **1360, out of which 55 were external participants**. The experts, both internal and external had put in great efforts in delivering topics that were in leading technologies. This initiative will enhance the student's employability and also creates a talent pool at the department and the college level.

Interestingly, for some courses, there is a high demand from the students to increase the course period and teach them the advanced topics in that courses. Having understood their eagerness and interest in learning the topics, an honest attempt was made to collect feedback from students so as to improvise on conduction, preparedness, offering the right courses, engaging the right resources persons, etc... in the times to come. This feedback will certainly shape the planning process of conducting open course next time. The details of all the open courses are given form the next page.

Abstract	<p>The department of Artificial Intelligence and Machine Learning successfully conducted 5 days training on Deep learning with Python. Dr. Bharathi M A, delivered introductory session deep learning and it's applications. Followed by introductory session an external Speaker Mr. Amarthya delivered a hands on session for three full days covering major topics of deep learning which includes CNN, ANN, working of Artificial Neural networks, building ANN using Tensorflow and Keras, RNN, LSTM, building self-organizing maps. Participants were made to identify specific animals from a dataset of 10000 pictures. One of the assignment was to predict stock market with a dataset. Later participants were to trained to build credit card fraud detection system. The</p>	

internal speakers Dr. Vishwa Kiran S and Dr. Anupama H S, covered basics of Python required for Deep Learning.

### Photograph of the event:

The screenshot shows a Google Meet interface. On the left, a presentation slide is displayed with the BMS Institute of Technology and Management logo at the top. The slide title is "INTRODUCTION" and the main heading is "What is Deep Learning?". The text on the slide reads: "Deep learning is a branch of machine learning that uses data, loads and loads of data, to teach computers how to do things only humans were capable of before. For example, how do machines solve the problems of perception?". Below the text is a small image of a speech recognition waveform. The right side of the screen shows a list of participants in the meeting, including Bharathi M A (who is presenting), N Rakesh, Anupama H S, and several students with IDs like 1BY19AI023, 1BY19AI025, etc. Meeting controls like "Raise hand", "Turn on captions", and "Bharathi M A is presenting" are visible at the bottom.

This screenshot shows a wider view of the Google Meet session. The main area is a grid of 44 participants, each with a small video thumbnail and their name. The participants include Joseph Ke..., K Swetha EC..., Nivedita S E..., 1BY19AI046, 1BY19AI026, 1BY19AI035, 1BY19AI044, 1BY19AI055, Amarthya Ra..., 1BY19AI007, 1BY19AI023, 1BY19AI003, 1BY19AI039, VINAY M S E..., 1BY19AI005, Deeksha N E..., 1BY19AI012, MONISHA S..., 1BY19AI029, 1BY19AI047, 1BY19AI001, 1BY19AI059, 1BY19AI052, 1BY19AI058, 1BY18CS21..., 1BY19AI022, 1BY19AI057, 1BY19AI043, 1BY19AI045, 1BY19AI017, AI ML, 1BY19AI019, 1BY19AI024, Bharathi M A, 1BY19AI040, 1BY19AI028, 1BY19AI048, 1BY19AI049, 1BY19AI027, and 1BY19AI053. Meeting controls like "Raise hand", "Turn on captions", and "Present now" are visible at the bottom.

Open Course Outcomes		
CO-1	Explain basic principles of Deep Learning and Python programming language	
CO-2	Classify data by applying various clustering algorithms using python programming.	
CO-3	Identify and apply the appropriate deep learning technique for classification, pattern recognition, and optimization and decision problems.	
CO-4	Evaluate the performance of various Classification algorithms in deep learning using python programming.	

### CO-PO Mapping for open course of “Deep Learning with Python”

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO3
CO1					2							2	
CO2			2									2	
CO3	3								2	2		3	
CO4		3			2							2	

#### Feedback from external expert:

1. External Speaker appreciated the participants for being interactive

#### Feedback (critical) from students:

1. Python Course must be conducted before Deep learning
2. Some of the sessions handled by external speaker should have been clearer

#### Feedback from External participants (if any):

1. – NIL-

#### Corrective methods/suggestions to consider while conducting open course next time (at least two points)

1. Pre -requisite to be covered first
2. Sufficient time must be given to participants to complete their assignment

### Sample course feedback form

<p><b>Abstract</b></p>	<p>This course provides an introduction to Nanotechnology and Design Thinking. Nano research involves the materials having unique properties which make them suitable candidates for technological improvement and thus can be used in various applications. Nanomaterials are cornerstones of nanoscience and nanotechnology. The use of revolutionized techniques helps us to improve the methods of preparation of such materials with improved functionality. Nanomaterials have already shown a significant influence in the field of battery technology, in catalysis, in biomedical and various other technologies. The students of all engineering branches can find application of these materials in their field.</p>
------------------------	---

### Feedback from external expert:

1. Well planned open course
2. Good research topics identified

### Feedback (critical) from students:

1. Very Helpful course
2. Can utilize in PBL

### Feedback from External participants (if any):

1. Very helpful course
2. External resource person are very good

### Corrective methods/suggestions to consider while conducting open course next time (at least two points)

1. Live lab demo will be helpful
2. Include nanocomposite material application in battery

It was very informative, interesting, fruitful and thought-provoking session. All the sessions were very interactive. All the speakers have delivered the contents nicely. There was active participation by delegates. There was excellent dedication, coordination and untiring efforts shown by the Department of Chemistry under the Guidance and Support of HOD Dr. Ramakrishnappa Sir. Please organise conference on Characterization of nanomaterials using NMR, TEM, SEM, XPS, HPLC, etc. Thanks.

Abstract (Brief Details of the open course with less than 250 words)	Cyber Security plays an important role in the field of information technology .Securing the information have become one of the biggest challenges in the present day. Whenever we think about the cyber security the first thing that comes to our mind is ‘cyber crimes’ which are increasing immensely day by day. Various	

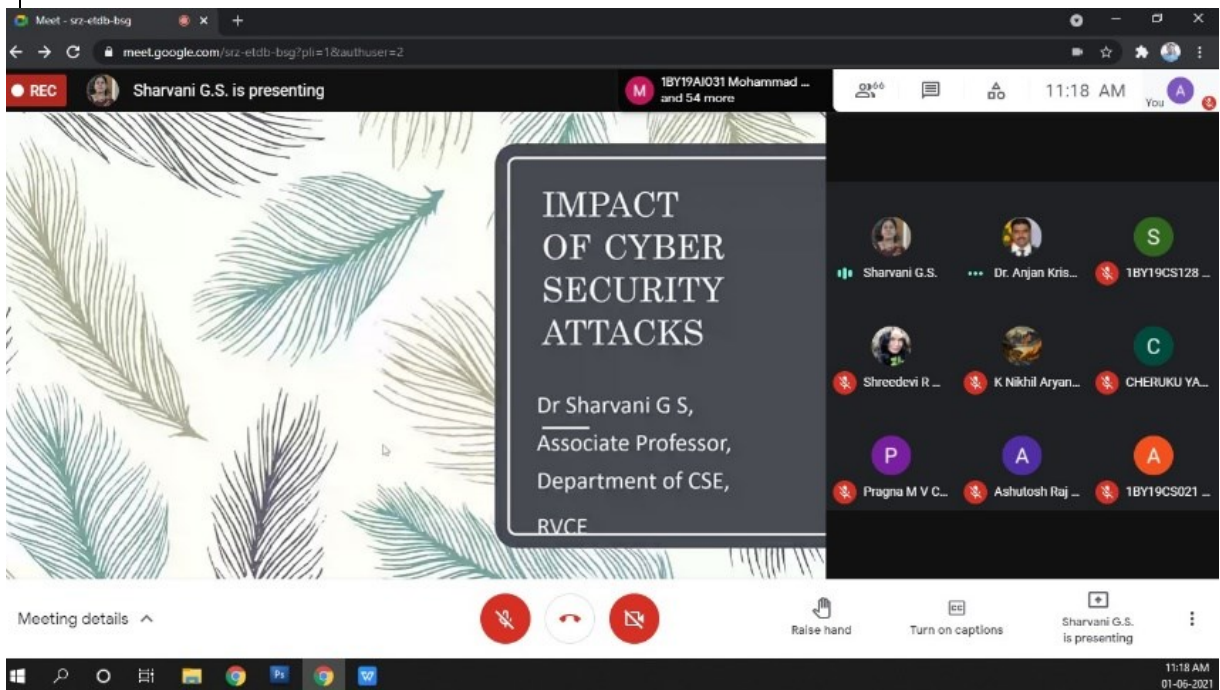

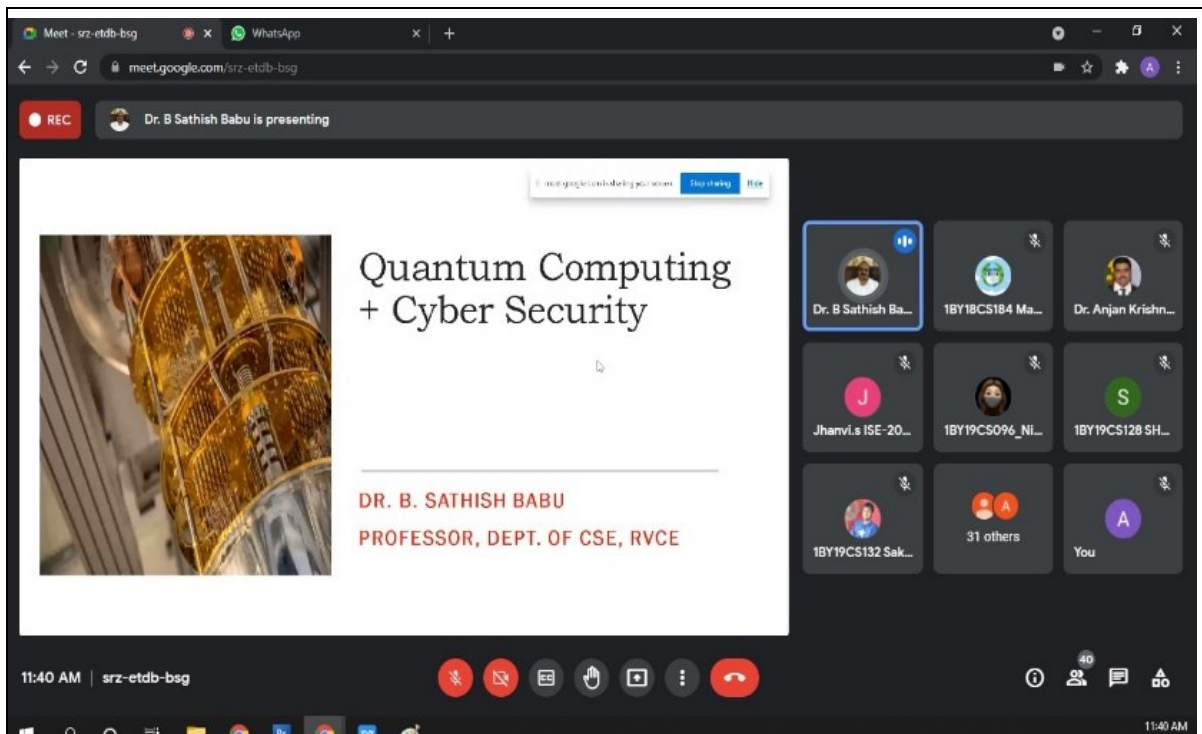

## OPEN COURSE 2020-2021 (EVEN SEM)

June 1-5, 2021

	<p>Governments and companies are taking many measures in order to prevent these cybercrimes. Besides various measures cyber security is still a very big concern to many. This course mainly focuses on challenges faced by cyber security on the latest technologies .It also focuses on latest about the cyber security techniques, ethics and the trends changing the face of cyber security. Block chain is a technology that is developed using a combination of various techniques such as mathematics, algorithms, cryptography, economic models, and so on. Block chain is a public ledger of all cryptocurrency transactions that are digitized and decentralized. All the transactions of cryptocurrencies are stored in chronological order to help users in tracking the transactions without maintaining any central record of the transactions. This course will discuss the security and privacy of the block chain along with their impact with regards to different trends and applications. The chapter is intended to discuss key security attacks and the enhancements that will help develop a better block chain systems.</p>

### Feedback from external expert:

1. The sessions are interactive with good spontaneous response.
2. Appreciated the initiatives to bridge the gap between industry and academia.

### Feedback (critical) from students:

1. Students have appreciated the session and have given very good rating.
2. Students have expressed the technological coverage was good with practical hands-on experience.

### Feedback from External participants (if any):

1. Nil

### Corrective methods/suggestions to consider while conducting open course next time (at least two points)

1. To start the process at least 15 days prior to the commencement of the open course.
2. To have a single source format where the data can be uploaded in a time-bound manner.

### Sample course feedback form

Design and Develop Android application by setting up Android development environment.</b></li> </ol>	

### Abstract

In the digital realm, a website is an essential element for businesses, irrespective of their size and type. It helps them increase their brand presence via the Internet breaking the geographical boundaries. A professional website design itself can be used to attain various marketing strategies in order to help your business surge. Thoughtfully created website designs have a far outspread reach than any other form of marketing tools. A professional web design arouses the curiosity of the visitors to dive in further. Web design is about deciding on a lot of elements such as the layout, graphics, colors, fonts, structure, content, text styles, interactive features, imagery, interface, standardized code, etc. It involves a wide range of skills and disciplines

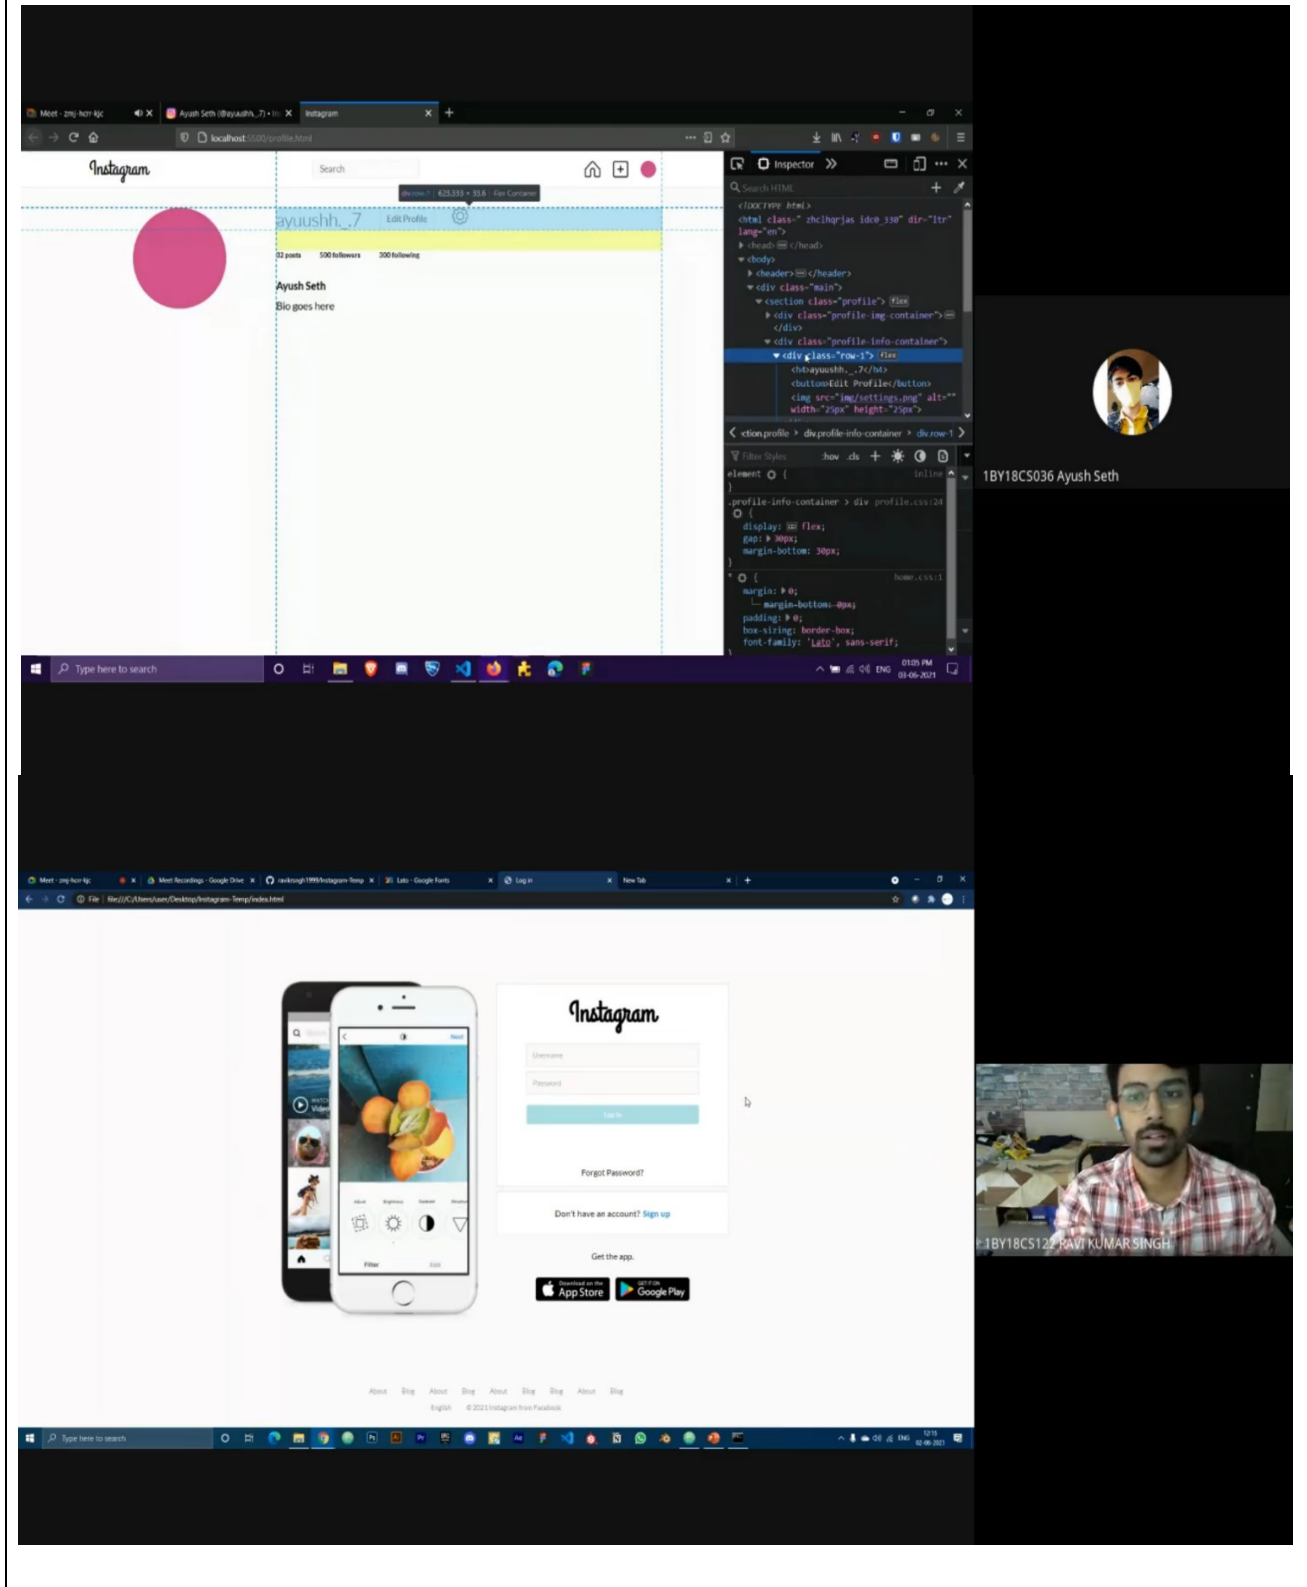

This 5-days course will mainly focus on forming basics of web development and deployment, which will cover all aspects frontend, backend and deployment to the server. The main focus of the course is the new technology used in industries called Django which is a framework for web development using python. Django is a high-level Python Web framework that encourages rapid development and clean, pragmatic design. Built by experienced developers, it takes care of much of the hassle of Web development, so you can focus on writing your app without needing to reinvent the wheel.

One of the session is on Mobile application development. It is the process to making software for smartphones and digital assistants, most commonly for Android and iOS. The software can be preinstalled on the device, downloaded from a mobile app store or accessed through a mobile web browser. Design and Develop Android application by setting up Android development environment.

### Photograph of the event:

Open Course Outcomes Of “ <i>Open course Title</i> ”	CO-1	Illustrate the Semantic Structure of HTML and CSS
	CO-2	Compose forms and Tables using HTML and CSS
	CO-3	Building Backend Using Django
	CO-4	Develop Mobile App Development

### CO-PO Mapping for open course of “Building Instagram in 5 Days!”

CO4	x			x	x				x		x		

#### Feedback from external expert:

1. Conducting Open Course is useful to all branches is a very good initiative. Its good to deliver lectures along with hands-on.
2. Participants are very curious and showing lot of interest. It’s a good experience to share the knowledge.

#### Feedback (critical) from students:

1. It was wonderful sessions. Both the resource persons Mr.Ayush and Mr.Ravi did a great job in teaching us. They did excellent work in making us understand concepts, clearing all of our doubts. They presenting was so good that even we were ready to ready extra sessions beyond time limit. It's been very useful effective sessions. Thank you.
2. These sessions were very interesting. The resource persons dedication level & knowledge about the topic is incredible. Thank you so much.

#### Feedback from External participants (if any):

1. Amazingly informative...
2. It’s a useful session where we don’t have the background of Web development could able to learn from scratch.

#### Corrective methods/suggestions to consider while conducting open course next time (at least two points)

1. More time to be allotted than it was allotted this time.

### Sample course feedback form

The instructor effectively explained and illustrated course concepts

47 responses

The instructor encouraged student participation in class

47 responses

The instructor communicated clearly and was easy to understand

47 responses

### Abstract

*C is a Middle-Level Language.* The middle-level languages are somewhere between the Low-level machine understandable assembly languages and High-Level user friendly languages. Being a middle-level language, C reduces the gap between the low-level and high-level languages. It can be used for writing operating systems as well as doing application level programming.

*Helps to understand the fundamentals of Computer Theories.* Most of the theories related to computers like Computer Networks, Compiler Designing, Computer Architecture and Operating Systems are based on C programming language and requires a good knowledge of C programming if you are working on them. In the modern high level languages, the machine level details are hidden from the user, so in order to work with CPU cache, memory, network adapters, learning C programming is a must.

*Fewer Libraries.* C programming language has fewer libraries in comparison with other high-level languages. So, learning C programming also clears programming concepts to a great extent as you have to write lot of things from scratch. You will not be dependent on the programming language entirely for implementing some basic operations and implementing them on your own will also help you to build your analytical skills.

*C is very fast in terms of execution time.* Programs written and compiled in C executes much faster than compared to any other programming language. C programming language is very fast in terms of execution as it does not have any additional processing overheads such as garbage collection or preventing memory leaks etc. The programmer must take care of these things on his own.

*Embedded Programming.* C is extensively used in Embedded Programming. Embedded Programming is also referred to as micro-controller programming, where C program is used to control micro-controllers. Microcontrollers and embedded programming is widely used in auto-motives, Robotics, Hardware etc..

If a person learns C programming first, it will help him to learn any modern programming language as well. As learning C help to understand a lot of underlying architecture of operating system. Like, pointers, working with memory locations etc. auto-motives, Robotics, hardware etc..

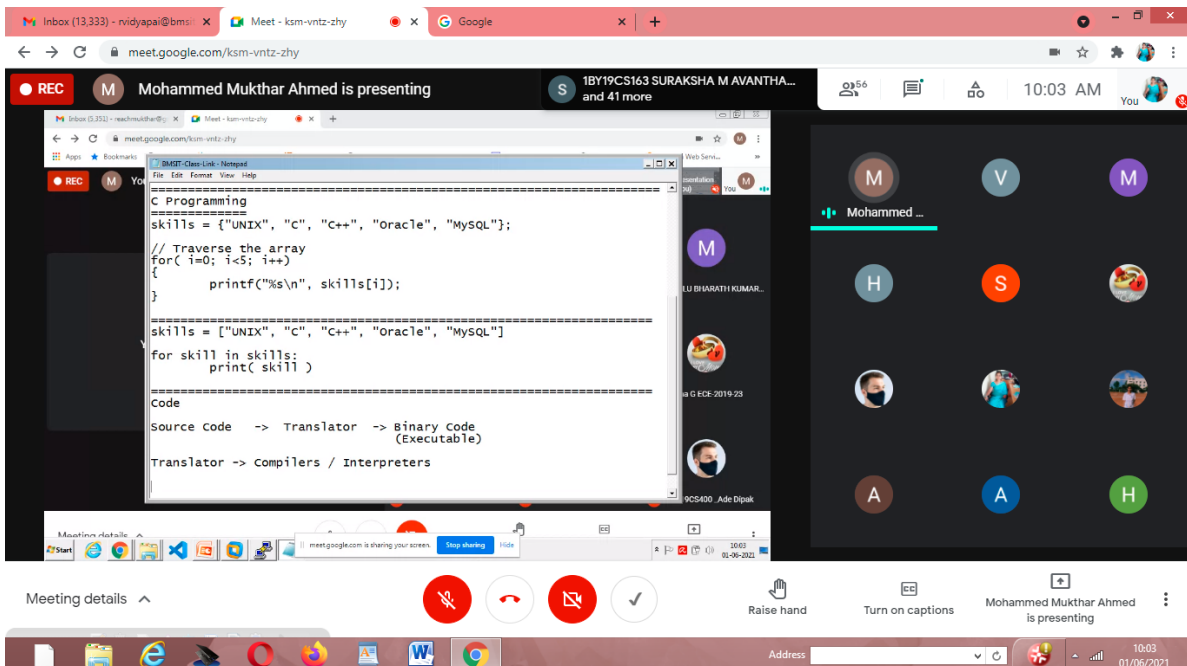

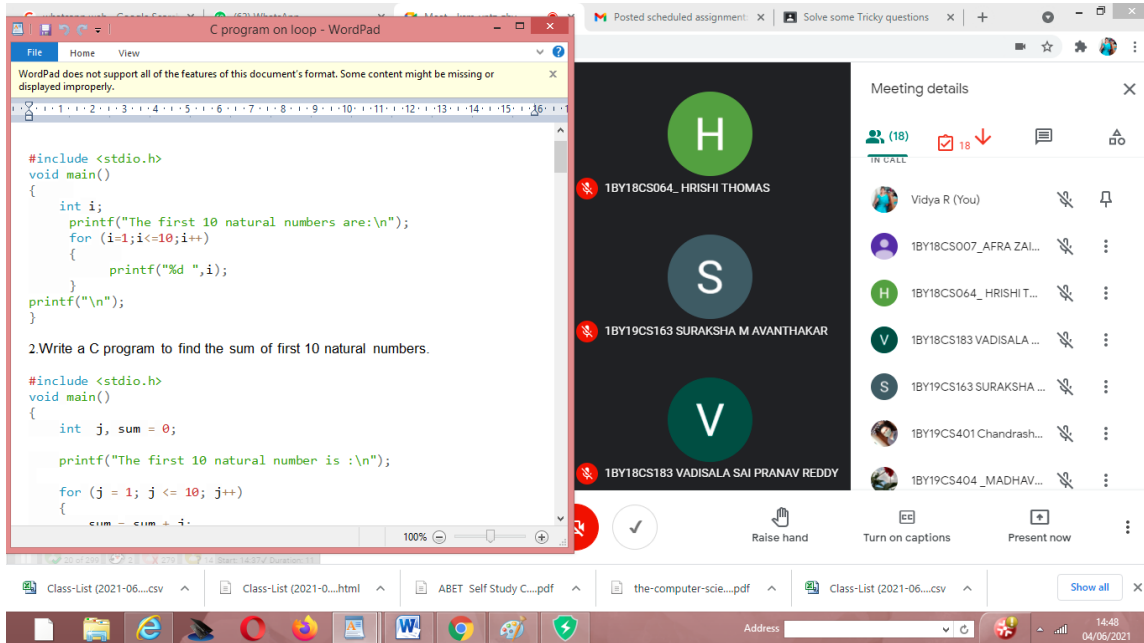

This course is designed to benefit students not only in project building in above specified domains, but also to cater the placement needs.

The external resource person is a company trainer with a decade of experience in training software engineers and researchers.

### Photograph of the event:

Open Course Outcomes Of “C Programming for Placements”	CO-1	Illustrate the fundamental and C programming concepts
	CO-2	Demonstrate the use of programming constructs arrays and structures for an inclusive solution to given problem,
	CO-3	Organize the given problem by modularizing in to functions and structures.
	CO-4	Analyze the program flow of given problem and present programming solution to with efficiency.
	CO-5	Applying problem solving strategies for projects concerning Engineering and Societal domains

### Abstract

Java is the one of the most popular programming languages in the world today. It works on any platform, and is the core language used in developing Android apps. It's a great first language for any aspiring programmer, so whether you want to program Android apps, web apps, or simply learn the foundational skills.

This course will introduce you to some of the most powerful programming concepts in Java, including: objects, inheritance and collections. You will learn how to use these object-oriented programming concepts in code examples, discover how these concepts are used in applications that require user input, and understand the benefits of mastering these concepts in Java. By the end of the course, you will understand how and when to apply foundational Java concepts, and will gain a deeper understanding of the tools and logic that professional Java developers use every day.

Open Course Outcomes “Object Oriented Programming with JAVA for Industry”	CO1	Explain the object-oriented concepts and JAVA.
	CO2	Apply the object oriented concepts and techniques for the development of the user application.
	CO3	Develop computer programs to solve real world problems in Java .
	CO4	Interpret the need for advanced Java concepts like enumerations and collections in developing modular and efficient programs.
	CO5	Enable project teams to maximise value of software delivered, and ensure customer satisfaction.

### CO-PO Mapping for open course of “Object Oriented Programming with JAVA for Industry”

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1											X			
CO2											X

CO5						X					X			

#### Feedback from external expert:

1. Good effort were put in to bring about a change in the students towards the learning aspects of the language.
2. It was informative and helpful as we gained a lot of knowledge about JAVA and its applications.

#### Feedback (critical) from students:

1. Students asked to include more practical sessions on basics.
2. It could have been better but good effort from the teachers.

**Feedback from External participants (if any):NIL**

**Corrective methods/suggestions to consider while conducting open course next time (at least two points)**

1. Sample mini projects.
2. Different IDE used in Industry and its comparison.

**Sample course feedback form**

Abstract	<p>In this open course the participants dive into the basics of machine learning using Python, an approachable and well-known programming language. The sessions talk about supervised vs. unsupervised learning, look into how statistical modeling relates to machine learning, and do a comparison of each. The sessions also introduced Open CV, use of Open CV in Machine Learning, training and testing the models, the recommendation systems, Ethical hacking, the use of ML in Walmart, Rolls Royce etc.</p>	
<b>Photograph of the event:</b>		

The screenshot shows a Cisco Webex meeting interface. The main window displays a Jupyter Notebook titled 'simple\_linear\_regression.ipynb'. The notebook contains the following code:

```

1 plt.scatter(X_train, y_train, color = 'red')
2 plt.plot(X_train, regressor.predict(X_train), color = 'blue')
3 plt.title("Salary vs Experience (Training set)")
4 plt.xlabel("Years of Experience")
5 plt.ylabel("Salary")
6 plt.show()

```

Below the code is a scatter plot titled "Salary vs Experience (Training set)". The x-axis is labeled "Years of Experience" and ranges from 0 to 10. The y-axis is labeled "Salary" and ranges from 0 to 120,000. Red dots represent the training data points, and a blue line represents the linear regression fit. The data points show a positive correlation between years of experience and salary.

To the right of the notebook is a data table titled "Salary\_Data.csv" showing 30 entries. The columns are "YearsExperience" and "Salary".

YearsExperience	Salary
1.1	39343.00
1.3	46205.00
1.5	37731.00
2.0	43525.00
2.2	39891.00
2.9	56642.00
3.0	60150.00
3.2	54445.00
3.2	64445.00
3.7	57189.00
3.9	63218.00
4.0	55794.00
4.0	56957.00
4.1	57681.00
4.5	61111.00
4.9	67938.00
5.1	66029.00
5.3	83088.00
5.9	81363.00
6.0	93940.00
6.8	91738.00
7.1	98273.00
7.9	101302.00
8.2	113812.00

The meeting interface also shows a list of participants (83) and a chat window.

The screenshot shows a Cisco Webex meeting interface. The top bar includes 'Cisco Webex Meetings', 'Meeting Info', and 'Hide Menu Bar'. Below this is a menu with 'File', 'Edit', 'Share', 'View', 'Audio & Video', 'Participant', and 'Meeting Help'. A participant list at the top shows 'Bharathi R Me', 'Allen Benny' (highlighted with a blue box), '123', '1BY18CS058 Greeshma', '1BY19AI009\_Ananya S Ma...', and '1BY19CS067'. The main content area displays a slide titled 'FORMULA' with the equation  $y_i = \beta_0 + \beta_1 x_{i1} + \beta_2 x_{i2} + \dots + \beta_p x_{ip} + \epsilon$ . Below the equation, it states 'where, for  $i = n$  observations:'. The slide lists:  $y_i$  = dependent variable,  $x_i$  = explanatory variables,  $\beta_0$  = y-intercept (constant term),  $\beta_p$  = slope coefficients for each explanatory variable, and  $\epsilon$  = the model's error term (also known as the residuals). The slide is titled 'Multiple Linear Regression' at the bottom. The bottom of the slide shows controls for 'Unmute', 'Start video', 'Share', and 'Participants'.

The screenshot shows a Cisco Webex meeting interface. The top bar includes 'Cisco Webex Meetings', 'Meeting Info', and 'Hide Menu Bar'. Below this is a menu with 'File', 'Edit', 'Share', 'View', 'Audio & Video', 'Participant', and 'Meeting Help'. A participant list at the top shows 'Bharathi R Me', 'Poorvik D', 'Allen Benny' (highlighted with a blue box), '1BY18CS058 Greeshma', 'BMSIT&M Host', and '1BY18CS166 Sneha M'. The main content area displays a Python code execution window. The code includes `cv2.waitKey(0)` and `width=600, height=322, depth=3`. The output shows a screenshot of a car interior with a woman driving. The bottom of the slide shows controls for 'Unmute', 'Start video', 'Share', and 'Participants'.

Open Course Outcomes Of “Machine Learning For Beginners”	CO1	Discuss the basic concepts of machine learning.
	CO2	Illustrate concept learning, ID3, ANN, Bayes classifier, k nearest neighbor,
	CO3	Analyze the given data using Machine learning techniques.
	CO4	Devise a solution for complex problems using Machine learning techniques.
	CO5	Develop a code using any suitable language for a real time application

<p>Curriculum Gaps: (Please indicate the gaps in terms of POs/PSOs)</p>	<p><b>Gap found in PO-11 in the curriculum hence the project management and finance course will fill the gap</b></p>
<p>Abstract</p>	<p><b>Project Management and Finance (PMF)</b> is an iterative approach to planning and guiding project processes. The main benefit of Project Management is its ability to respond to issues as they arise throughout the course of the project. Making a necessary change to a project at the right time can save resources and, ultimately, help deliver a successful project on time and within budget. Project methodology breaks down projects into small pieces that are completed in work sessions that run from the design phase to testing and quality assurance (QA). These sessions are often called sprints, the term for iteration used in one specific and popular agile development method known as Scrum.</p>

Photograph of the event:

How does project management benefit you?

- To have goal clarity and measurement
- resources will be coordinated
- risks will be identified and managed
- increase the possibilities of time savings
- increase the possibilities of cost savings
- increase the possibilities of achieving the agreed outcome
- increase the possibilities to deliver projects successfully

Curriculum Gaps: (Please indicate the gaps in terms of POs/PSOs)	<b>PO6-PO12 not met</b> <b>This open course helps to bridge these gaps</b>	
Abstract	In this open course the participants dive into the basics of machine learning using Python, an approachable and well-known programming language. The sessions talk about supervised vs. unsupervised learning, look into how statistical modeling relates to machine learning, and do a comparison of each. The sessions also introduced Open CV, use of Open CV in Machine Learning, training and testing the models, the recommendation systems, Ethical hacking, the use of ML in Walmart, Rolls Royce etc.	

### Photograph of the event:

The screenshot shows a Cisco Webex meeting interface. The main content is a Jupyter Notebook titled 'simple\_linear\_regression.ipynb'. The notebook displays the following code and output:

```

1 plt.scatter(X_train, y_train, color = 'red')
2 plt.plot(X_train, regressor.predict(X_train), color = 'blue')
3 plt.title("Salary vs Experience (Training set)")
4 plt.xlabel('Years of Experience')
5 plt.ylabel('Salary')
6 plt.show()

```

The output is a scatter plot titled "Salary vs Experience (Training set)". The x-axis is labeled "Years of Experience" and ranges from 2 to 10. The y-axis is labeled "Salary" and ranges from 40,000 to 120,000. Red dots represent the training data points, and a blue line represents the linear regression fit. The plot shows a positive correlation between years of experience and salary.

Below the plot, there is a table titled "Salary\_Data.csv" showing the data used for training:

YearsExperience	Salary
1.1	39343.00
1.3	46205.00
1.5	37731.00
2.0	43525.00
2.2	39891.00
2.9	56642.00
3.0	60150.00
3.2	54445.00
3.7	57189.00
3.9	63218.00
4.0	55794.00
4.0	56957.00
4.1	57081.00
4.5	61111.00
4.9	67938.00
5.1	66029.00
5.3	83088.00
5.9	81363.00
6.0	93940.00
6.8	91738.00
7.1	98273.00
7.9	101302.00
8.2	113812.00

The screenshot shows a Cisco Webex meeting interface displaying a slide titled "FORMULA" for Multiple Linear Regression. The slide content is as follows:

**FORMULA**

$$y_i = \beta_0 + \beta_1 x_{i1} + \beta_2 x_{i2} + \dots + \beta_p x_{ip} + \epsilon$$

where, for  $i = n$  observations:

- $y_i$  = dependent variable
- $x_i$  = explanatory variables
- $\beta_0$  = y-intercept (constant term)
- $\beta_p$  = slope coefficients for each explanatory variable
- $\epsilon$  = the model's error term (also known as the residuals)

**Multiple Linear Regression**

Abstract (Brief Details of the open course with less than 250 words)

In the digital realm, a website is an essential element for businesses, irrespective of their size and type. It helps them increase their brand presence via the Internet breaking the geographical boundaries. A professional website design itself can be used to attain various marketing strategies in order to help your business surge. Thoughtfully created website designs have a far outspread reach than any other form of marketing tools. A professional web design arouses the curiosity of the visitors to dive in further. Web design is about deciding on a lot of elements such as the layout, graphics, colors, fonts, structure, content, text styles, interactive features, imagery, interface, standardized code, etc. It involves a wide range of skills and disciplines

This 5-days course will mainly focus on forming basics of web development and deployment, which will cover all aspects frontend, backend and deployment to the server. The main focus of the course is the new technology used in industries called Django which is a framework for web development using python. Django is a high-level Python Web framework that encourages rapid development and clean, pragmatic design. Built by experienced developers, it takes care of much of the hassle of Web development, so you can focus on writing your app without needing to reinvent the wheel.

One of the session is on Mobile application development. It is the process to making software for smartphones and digital assistants, most commonly for Android and iOS. The software can be preinstalled on the device, downloaded from a mobile app store or accessed through a mobile web browser. Design and Develop Android application by setting up Android development environment.

**Photograph of the event:**

Open Course Outcomes Of “Web Full stack Development”	CO-1	Illustrate the Semantic Structure of HTML and CSS
	CO-2	Compose forms and Tables using HTML and CSS
	CO-3	Building Backend Using Django
	CO-4	Develop Mobile App Development

### CO-PO Mapping for open course of “Web Full stack Development”

### Feedback from external expert:

1. Conducting Open Course is useful to all branches is a very good initiative. Its good to deliver lectures along with hands-on.
2. Participants are very curious and showing lot of interest. It's a good experience to share the knowledge.

### Feedback (critical) from students:

1. It was wonderful sessions. Both the resource persons Mr. Ayush and Mr. Ravi did a great job in teaching us. They did excellent work in making us understand concepts, clearing all of our doubts. They presenting was so good that even we were ready to ready extra sessions beyond time limit. It's been very useful effective sessions. Thank you.
2. These sessions were very interesting. The resource persons dedication level & knowledge about the topic is incredible. Thank you so much.

### Feedback from External participants (if any):

1. Amazingly informative...
2. It's a useful session where we don't have the background of Web development could able to learn from scratch.

### Corrective methods/suggestions to consider while conducting open course next time (at least two points)

1. More time to be allotted than it was allotted this time.

### Sample course feedback form

The instructor effectively explained and illustrated course concepts

47 responses

The instructor encouraged student participation in class

47 responses

The instructor communicated clearly and was easy to understand

### Abstract

Cyber Security plays an important role in the field of information technology .Securing the information have become one of the biggest challenges in the present day. When ever we think about the cyber security the first thing that comes to our mind is 'cyber crimes' which are increasing immensely day by day. Various Governments and companies are taking many measures in order to prevent these cyber crimes. Besides various measures cyber security is still a very big concern to many. This course mainly focuses on challenges faced by cyber security on the latest technologies .It also focuses on latest about the cyber security techniques, ethics and the trends changing the face of cyber security. Blockchain is a technology that is developed using a combination of various techniques such as mathematics, algorithms, cryptography, economic models, and so on. Blockchain is a public ledger of all cryptocurrency transactions that are digitized and decentralized. All the transactions of cryptocurrencies are stored in chronological order to help users in tracking the transactions without maintaining any central record of the transactions. This course will discuss the security and privacy of the blockchain along with their impact with regards to different trends and applications. The chapter is intended to discuss key security attacks and the enhancements that will help develop a better blockchain systems.

Curriculum Gaps: (Please indicate the gaps in terms of POs/PSOs)	<p><b>Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.</b></p> <p><b>PSO: Provide solutions related to civil engineering built environment through multidisciplinary approach.</b></p>	
Abstract	<p><b>The most advanced technology the world is looking for in civil industry is BIM. The basic tool of BIM is AutoCAD &amp; Revit Architecture, which includes many of the tools which have advanced applications. Each and every private organization is using these tools, not only private even the Indian government is looking forward to make this as mandate for construction.</b></p>	

### Photograph of the event:

Open Course Outcomes Of “Revit Architecture for Beginners”	CO-1	Describe building information modelling methodology and its benefits
	CO-2	Use different parts of the Revit Architecture user interface and work with different types of architectural elements and families.
	CO-3	Use the different views listed in the Project Browser, control the visibility and graphical.
	CO-4	Representation of objects in architecture model, and work with elevation, section, and 3D views.
	CO-5	Set up a project and transfer standards between projects, add and modify levels in project model, create and modify grids.

### Feedback from external expert:

1. Interested in conducting more of these trainings.

### Feedback (critical) from students:

1. This open course was informative and covered all the basic concepts of Revit Architecture. It went smooth. And it was highly required especially for the civil engineering students. Everything was done properly and just the time given wasn't enough. Overall i m satisfied with the course and thankful to the teaching staff for conveying the information nicely and listening properly to the queries of student also.

### Feedback from External participants (if any): -NIL-

### Corrective methods/suggestions to consider while conducting open course next time (at least two points)

1. Need more time

<p>Abstract</p>	<p>E-Surveying software will help to process the Extensive survey data especially Restoration Project, New Proposed Project, High ways and Tunnel project and Water supply and Town planning projects. Data will collect from ground survey and data processing will be done through this ESurveying software. The drawing and design will prepare with these data. With a drone, surveyors can capture many more topographic data points, hence more accurate volume measurements. They can also do this in a much safer way than if they had to manually capture the data by going up and down a stockpile. Students will be able to learn advanced software's to process extensive survey project and drone survey data.</p>

Abstract (Brief Details of the open course with less than 250 words)	<p>The explosive growth of the —Internet of Things is changing the current trends in the world and the rapid drop in price for typical IoT components is allowing people to innovate new designs and products. In this course, students will learn the importance of IoT in society, the current components of typical IoT devices and trends for the future. IoT design considerations, constraints and interfacing between the physical world and your device will also be covered. Addition, students will also learn how to make design trade-offs between hardware and software. This course will also cover key components of networking to ensure that students understand how to connect their device to the Internet.</p> <p>So this online course has been organized in order to provide the students a platform to learn the fundamental concepts of IoT, the software's used to establish the communication between the devices and the various IoT protocols used and its importance.</p> <p><b>Prerequisites:</b> Students must have basic knowledge on microcontrollers and embedded C programming. The students will</p>	

be requiring to participating actively in creative thinking exercises and be willing to be innovative. Participate in open discussions is a must.

### Photograph of the event:

The screenshot shows a Google Meet interface with two presentations. The first presentation, by Vinay TR, displays a pie chart titled "Sensor Applications for a Smarter World" with the following data:

Sensor Type	Percentage
Acceleration/Tilt	9%
Vibration	4%
Position/Proximity	3%
Chemical/Gas	12%
Acoustic/Sound	1%
Flow	6%
Ambient Light/Machine vision/Optical	3%
Humidity/Moisture/Water	12%
Motion/Velocity/Displacement	3%
Temperature	11%
Force/Load/Pressure	6%
Lags/Levels	2%
Electric	4%
Magnetic	10%
RFID/NFC	8%
Ultrasounds/Radio	7%

The second presentation, by Akash J Prakash, shows a slide with logos for NASSCOM (Consultant), FBMA (Advisor), Xwards, ZenSpectra, and Iitor.

Open Course Outcomes Of “ <b>FUNDAMENTALS OF IOT AND CIRCUIT SIMULATION</b> ”	<b>CO-1</b>	Demonstrate the fundamental concepts of the Internet of Things and its applications and architecture models.
	<b>CO-2</b>	Design the real time applications using Arduino Controller and Sensors
	<b>CO-3</b>	Apply the python programming concepts to create connection with the hardware devices for IoTs.
	<b>CO-4</b>	Illustrate the features of IoT Communication Protocols and Need for Security issues in the IoT applications
	<b>CO-5</b>	Develop an IoT system having a simple three-layer web application

### Feedback from external expert:

1.

Respected Dr. Dankan Gowda sir,

I am happy being part of the Open Course on “**Fundamentals of IOT and Circuit Simulation**” course as a Resource Person.

Very impressive and active participation by all the students, resembles that this program was well thought.

Credit goes to BMSIT Management and Organizing team. Also, it is very well planned and organized.

As a resource person I appreciate all your students for their interactive participation throughout the long hours of hands-on sessions and quizzes. I was thoroughly impressed about the overall program and inspired.

Regards

Dr. Vaddi Naga Padma Prasuna,

Associate Professor,

ECE Dept,

WiE AG Advisor,

AIT, Bangalore, 9880598093

2. Hello Dankan,

I take this opportunity to firstly thank you for letting me take a session as an external expert in IoT & AI to bridge the gap of industry and academia needs. This is a wonderful attempt in building the gap. If this would be taken up based on the student interest as a part-time development program it would really help them out.

Student performance:

I felt it lacks a lot of professionalism in them I can't come to a conclusion at this point of time as to what is the reason for the same.

Suggestion:

I would request you and the faculties to start treating them as corporate employees and encourage professional communications rather than using more of informal modes for communication.

Regards:

Mr.Akash J

Life Bolt Innovation Pvt. Ltd

### **Feedback (critical) from students:**

- ❖ The course was very informative, it would have been more better if we could have had more hands on sessions.
- ❖ It was a really good session with lot of improvement in my knowledge, very informative! This type of course should be given a time slot in regular weeks also .
- ❖ The course was well organized with respect to the timings and resource persons. It was informative. The time duration of the course could have been extended to more than 5 days. And more hands on sessions would have been better.

### **Corrective methods/suggestions to consider while conducting open course next time (at least two points)**

1. As per the student's suggestion time duration of the open course is extended if it is possible.
2. extending hands on sessions, live demo projects.

### Sample course feedback form

Curriculum Gaps: (Please indicate the gaps in terms of POs/PSOs)	Strong correlation with POs (4, 5, 6, 7, 8, 9). Students will learn about new software tools like CST Microwave Studio, ANSYS HFSS for designing antennas and microwave filters. They also learn about the hardware tool Vectored network Analyzer for antenna and microwave filter measurements. They learn to identify few complex problems related to society and its solution through engineering practices like implementation of 5G technology.	

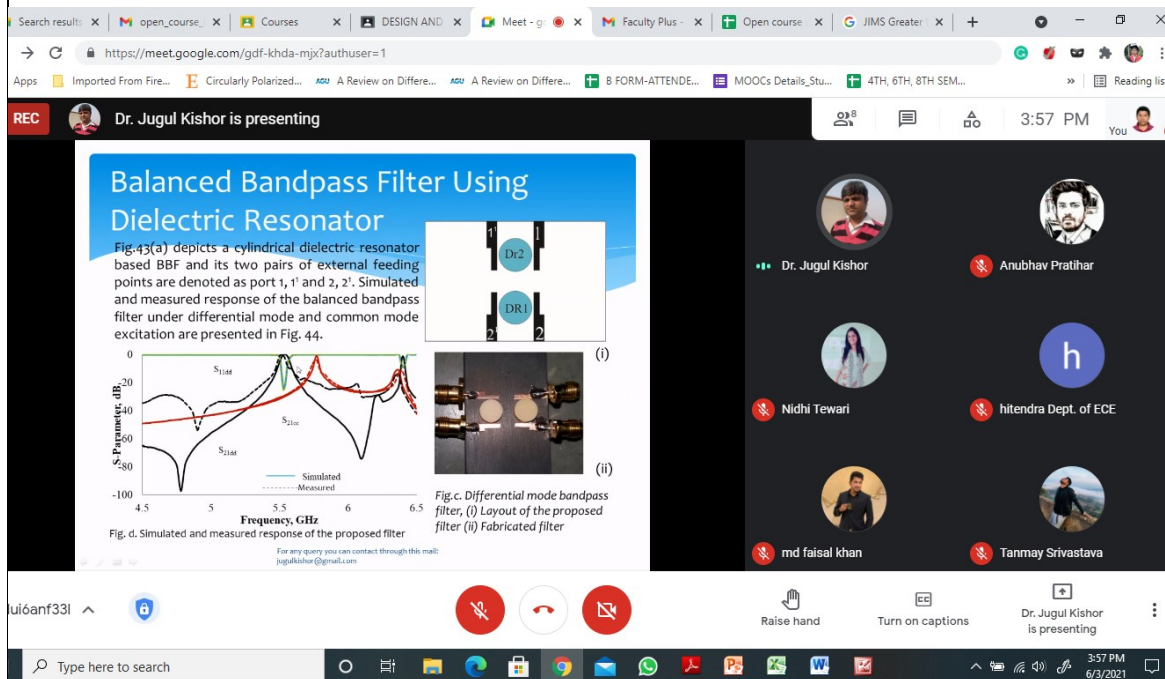

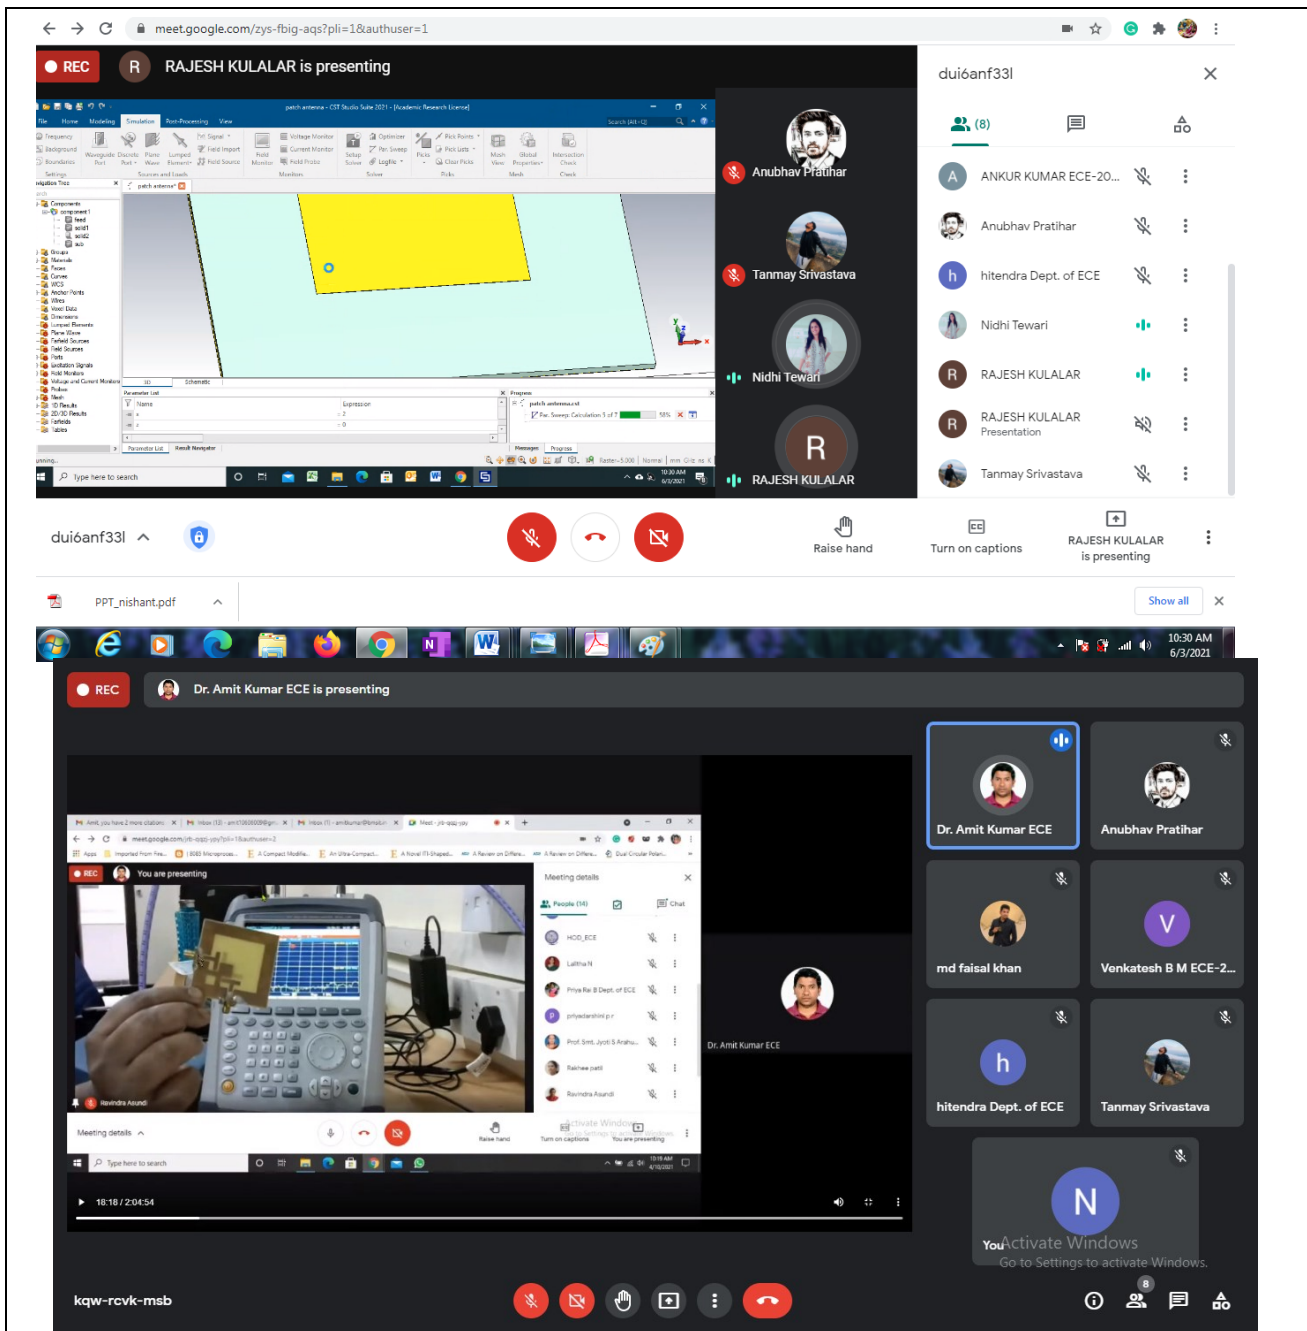

Abstract (Brief Details of the open course with less than 250 words)

The Course is aimed that describing some fundamentals concepts and software tools required to design and analyze few Microwave Devices like (Microstrip Antenna, MIMO antenna, Dielectric Resonator Antenna, Horn Antenna, and Microwave Filters) and few Electronics Devices like (MOSFET, thin-film transistor and some more). We will be providing a demo on Vector Network Analyzer for antenna measurement.

This open course is designed for students interested in designing Microwave and Electronic devices required for handheld devices like Mobile, Laptop, Wi-Fi, Bluetooth, and many more. They will get to know the flavor of high-data-rate transmission through 4G/5G applications.

### Photograph of the event:

Open Course Outcomes Of “Design and Analysis of Microwave and Electronic Devices”	CO-1	Understand the working of Antennas, Microwave Filters, and Electronic Devices like MESFET and HEMT devices.
	CO-2	Apply the usage of advanced Simulation Tools like CST, HFSS, and SILVACO.
	CO-3	Design Microstrip Antennas, Microwave Filters and Devices like MOSFET
	CO-4	Evaluate the performance of Microwave and Electronics Devices

**CO-PO Mapping for open course of “Design and Analysis of Microwave and Electronic Devices”**

**Feedback from external expert:**

1. More Students who are willing to go for higher studies should be encouraged for this research oriented open-course.
2. Hands-on practice of the software by the students would be more beneficial. Advise them to download student version of CST Microwave Studio software available on <https://edu.3ds.com/en/software/cst-studio-suite-student-edition>

**Feedback (critical) from students:**

1. Students should be given more such opportunity to get involved in such interactive courses
2. Installed software access will be more beneficial for hands-on experience.

**Feedback from External participants (if any):**

1. Request to arrange something in Artificial Intelligence
2. Demo version of the installed software should have been more beneficial for hands-on experience.

**Corrective methods/suggestions to consider while conducting open course next time (at least two points)**

1. Pre- installed software access for the students.
2. Students should be given more such opportunity to get involved in such interactive courses

Curriculum Gaps: (Please indicate the gaps in terms of POs/PSOs)	Students got the opportunity in learning the various software tools which enhanced their lifelong learning skills by executing the projects individually.( PO12 )	
Abstract	The goal of machine learning for image analysis is for automating the process of image analysis. This course discusses the basic philosophy and methodological directions in which the various machine learning algorithms (supervised or unsupervised) can be adapted for image analysis in pattern recognition applications. Image analysis includes image processing and Pattern recognition. Image processing involves using a set of tools for	

June 1-5, 2021

enhancing, compressing, restoring and segmenting the images. It also extracts features for image description. Pattern recognition assigns the extracted features or patterns to the classes based on their relationship. Computer/Machine vision is an area in which image analysis is of importance. A typical application of a machine vision system is in the manufacturing industry, either for automated visual inspection or for automation in the assembly line. Character recognition is another important area of analysing text images, with major implications in automation and information handling. Computer-aided diagnosis is an application of medical image analysis with machine learning, aimed at assisting doctors in making diagnostic decisions. This open course is designed for students to gain the knowledge of machine learning for image analysis through MATLAB® from the basics. In this course we cover various types of analysis while highlighting the image enhancement, segmentation, restoration, feature extraction and machine learning modules.

### Photograph of the event:

The screenshot shows a Google Meet window with a PowerPoint presentation titled "Machine Learning for Image Analysis presentation". The presenter is Shilpa Hiremath. The slide content is "Image Sensing and Acquisition" and includes a diagram of an image sensor with handwritten notes "CMOS" and "CCD" in red. The meeting interface shows a "REC" button, a participant list with "K.manish Kumar Patro ECE-201... and 15 more", and meeting controls like "Meeting details", "Raise hand", and "Mute".

## OPEN COURSE 2020-2021 (EVEN SEM)

June 1-5, 2021

Open Course Outcomes Of “Machine Learning for Image Analysis”	CO-1	Design image analysis methods for use in pattern recognition applications.
	CO-2	Analyse and interpret the Feature extraction process of a data to understand the underlying information present
	CO-3	Use the MATLAB along with image processing, statistics and machine learning tool boxes to model the pattern recognition applications of study.

### CO-PO Mapping for open course of “Machine Learning for Image Analysis”

CO1			3										
CO2				3									
CO3					3				3	1		2	

#### Feedback from external expert:

1. External experts were happy to share their expertise in the course

#### Feedback (critical) from students:

1. These were good but we went too deep into the topic. It would be better if we had few more classes.
2. On a whole, it was nice,informative,useful course.It really worth our time.
3. I had a very good sessions from a week. I tried understand topics, Thanks lecturers your time. :)
4. It was really nice , we came to know some topics

#### Feedback from External participants (if any): -NIL-

#### Corrective methods/suggestions to consider while conducting open course next time (at least two points)

1. There are many complex things that are covered in this open course with respect to 4th sem syllabus,it would have been much better if the course concepts were slightly understandable for 4th sem students.
2. More courses should be offered

Abstract (Brief Details of the open course with less than 250 words)

Embedded systems are vital to modern society. Given that they are purpose-built for specific applications, they enable designs and optimizations that make it possible for us to enjoy the benefits of technology while minimizing cost and power consumption. Without embedded systems, our world would look vastly different than it does today. As technologies and movements like the Internet of Things, Industry 4.0, and “smart” homes & vehicles continue to gain traction, embedded systems will become more and more important. Understanding how embedded devices work and the myriad of applications where they can be used will make you better equipped to understand the world around you and leverage the benefits of embedded systems.

### Photograph of the event

Open Course Outcomes Of “Applied Embedded systems and IoT”	CO-1	Demonstrate the fundamental concepts of the Internet of Things and its applications and architecture models.
	CO-2	Design the real time applications using Arduino Controller and Sensors
	CO-3	Apply the python programming concepts to create connection with the hardware devices for IoTs.
	CO-4	Illustrate the features of IoT Communication Protocols and Need for Security issues in the IoT applications
	CO-5	Develop an IoT system having a simple three-layer web application

**Feedback from external expert: - NIL-**

### Feedback (critical) from students

- ❖ It was a really good session with lot of improvement in my knowledge, very informative! This type of course should be given a time slot in regular weeks also .
- ❖ The course was well organized with respect to the timings and resource persons. It was informative. The time duration of the course could have been extended to more than 5 days. And more hands on sessions would have been better.

### Corrective methods/suggestions to consider while conducting open course next time (at least two points)

1. As per the student’s suggestion time duration of the open course is extended if it is possible.
2. extending hands on sessions, live demo projects.

Abstract	<p>To really understand what is special about Bitcoin, we need to understand how it works at a technical level. We'll address the important questions about Bitcoin, such as:</p> <p><b>How does Bitcoin work? What makes Bitcoin different? How secure are your Bitcoins? How anonymous are Bitcoin users? What determines the price of Bitcoins? Can cryptocurrencies be regulated? What might the future hold?</b></p> <p><b>After this course, you'll know everything you need to be able to separate fact from fiction when reading claims about Bitcoin and other cryptocurrencies. You'll have the conceptual foundations you need to engineer secure software that interacts with the Bitcoin network. And you'll be able to integrate ideas from Bitcoin</b></p>	

in your own projects.

Photograph of the event:

<b>Open Course Outcomes Of “Cryptocurrencies and the Technology Behind it !”</b>	CO-1	Acquire a fundamental understanding of cryptocurrency and e-payment – the basic principles as well as the technical and business aspects;
	CO-2	Evaluate cryptocurrency and e-payment systems, applications and protocols;
	CO-3	Design and implement cryptocurrency and e-payment systems/applications.
	CO-4	Identify major research challenges and technical gaps existing between theory and practice in cryptocurrency.

### CO-PO Mapping for open course of “Cryptocurrencies and the Technology Behind it !”

**Feedback from external expert:**

1. First of its kind these kind of courses was conducted by the academic institution
2. The open course was new and enlightened all students with theory and practical's

**Feedback (critical) from students:**

1. Wonderful course we loved it .teachers have done a great job thank you
2. Now its our job to do incessant research on crypto, as many of them are novice in this thing, so rest all is incumbent upon us that we shouldn't be immured to just limited currency, its now time to explore virtual currency...At last i must say Thank You SIR! It was very informative.

**Feedback from External participants (if any): -Nil-**

**Corrective methods/suggestions to consider while conducting open course next time (at least two points)**

1. More number of open course in this direction
2. Longer duration is better

Cryptocurrencies and the Technology Feedback - Google Forms

13. My suggestions to improve these open courses in future: \*

More basic knowledge about crypto for those who don't know about it would be better

14. My other comments: \*

Wonderful course we loved it .teachers have done a great job thank you

Curriculum Gaps:	<b>Program Outcomes 7-12 are not addressed much.</b>	
Abstract	<p><b>Fundamentals of power semiconductor devices was touched with discussions on the PN junction, working of MOSFETs, IGBTs and BJTs. The two level inverter in half-bridge and full bridge configurations was analyzed. SPWM technique was introduced. The three phase bridge with concept of space vectors was touched. The hexagonal space vector diagram and the resulting waveforms was shown. The method of averaging space vectors in space vector PWM (SVPWM) was discussed. The three level neutral point clamped Inverter was analyzed, showing its advantages and disadvantages. The five level NPC inverter was also introduced. Youtube videos were shown on the basics of Multilevel Inverters. The NPC, Cascaded-H bridge and flying capacitor topologies were covered in the videos. Mr. B. Chandra Sekhar from TCS gave a talk on Multi-input converters which are similar to multilevel inverters. 12-sided polygonal voltage space vector based multilevel inverter was derived using cascaded 2 level inverters. Scalar control using V/f control to operate induction motors was taught. Some other optimal multilevel inverter methods were examined as give in a recent journal paper.</b></p>	

June 1-5, 2021

Photograph of the event:

Open Course Outcomes Of “Application of Multilevel Inverters”	CO-1	Become familiar with applications of 2-level, single and three phase inverters
	CO-2	Learn about application and concepts of multilevel inverters such as harmonics, EMC etc.
	CO-3	Understand “NPC” and cascaded H-bridge topologies.
	CO-4	Learn about cascading two level inverters to get higher level inverters

### CO-PO Mapping for open course of “Application of Multilevel Inverters”

Abstract (Brief Details of the open course with less than 250 words)

The MATLAB Application in Electrical Engineering was a specifically designed Open Course for the 4<sup>th</sup> and 6<sup>th</sup> Sem E&EE students. This course made use of the present pandemic driven situation of non-accessibility to the hardware components to both the students and the faculty. The entire course was delivered online with ample emphasis on the simulation of varieties of electrical concepts like filters, controllers and circuits. To make the most out of it, the students were given a detailed introduction to the basic MATLAB coding, and the SIMULINK in the first few sessions of the course. Gradually the concepts related to MATLAB applications were introduced.

The course provided the essential knowledge required to build basic modeling techniques and developing SIMULINK block diagrams in the electrical domain. Participants were provided with a working understanding of system modeling and design validation in SIMULINK/SIMSCAPE. Demonstrated how to analyse and relate the mathematical modeling with physical modeling in a simple RC parallel circuit.

Students were given a detailed introduction to the Control System MATLAB and Simulink: They cover the basics of MATLAB and Simulink and introduce the most common classical and modern control design techniques such as block reduction method, transfer function, PID controller. At the end of the 5 day course a quiz was conducted for 30 marks, covering most of the concepts taught during the Open Course. The participants were also given 3 mini problems, for which each student is required to submit a solution to any one of the problem. A feedback on various aspects about the open course has been taken.

<b>Abstract (Brief Details of the open course with less than 250 words)</b>	<p>Computer Network is a group of computers connected with each other through wires, optical fibres or optical links so that various devices can interact with each other through a network. The aim of the computer network is the sharing of resources among various devices . Networking is a knowledge in the brain. The network maps to neural connectivity. It also maps to the parallel active network of ideas in the mind. Concept networks provide a simple illustration of how the brain works. They also show how future artificial intelligence can be built.</p> <p>More formally, a network concept is a directed graph representing conceptual connectivity in the brain. The term is analogous to a semantic network used in linguistics, concept map used in knowledge representation, mind map used as a mnemonic prop.</p> <p>As it addresses inefficiencies in existing data movement tools when running on multicore systems by harnessing multicore parallelism to scale data movement on end systems in order to improve the efficiency in networking and the Internet of things (IoT) describes the network of physical objects. "things "that are embedded with sensors, software, and other technologies for the purpose of connecting and exchanging data with other devices and systems over the Internet ,the objective of this course is to introduce advanced concepts of Networking and IOT applications using various tool boxes like Packet tracer, Firewalls, IOT tool boxes and Evolution of First generations to 4<sup>th</sup> generations and its advances using 5G networks. The course imparts knowledge on usage of Networking, embedded systems and security tool for IOT applications. This course also impart concepts of data structure using C programming, WSN and IOT automations.</p> <p>Implementations of networking model on packet tracer and wire shark helps the students in understanding concepts clearly rather understanding theoretical concepts.</p>

#### Feedback from external expert:

1. External experts were happy to share their knowledge in our open course.

#### Feedback (critical) from students:

1. More on hands on session with extended duration of open course

#### Feedback from External participants (if any):

1. Sessions were good enough to cover all the concepts, happy for attending such course during this pandemic situation.

#### Corrective methods/suggestions to consider while conducting open course next time (at least two points)

1. More on inter disciplinary application oriented courses can be planned
2. More courses should be offered

### Sample course feedback form

The screenshot shows a Google Forms survey interface. The browser tabs include 'Inbox (3,033) - saritha.i.g@bmsit...', 'ADVANCED NETWORKING AND...', and 'Over all Feedback on Open cour...'. The URL is 'docs.google.com/forms/d/1wtV\_mqcqPzIXnZ9t0u01154m8epVqDIYG8wQn15rA/edit?ts=60bde3df#response=ACYDBNgELBmddMxgGSK-7dFwNGGQhvoF56FHCnlf...'. The survey contains two questions:

1. The open course offered were good enough to improve my knowledge and skills \*

- Strongly Disagree

Abstract (Brief Details of the open course with less than 250 words)

The main objective of the course is to inculcate programming fundamentals of MATLAB software tool required for Signal processing. The signal can be 1-D signal for example Bio-signals or 2-D signals such as image. This course is focused on introduction to fundamental programming concepts using MATLAB & SIMULINK, Various Tool boxes like signal processing, neural network, machine learning and Deep Learning Tool boxes. The course imparts knowledge on usage of MATLAB tools for signal analysis. Analysis of signals includes pre-processing, feature extraction, classification / prediction algorithms. Pre-processing of signals involves designing a suitable filter which will filter out the unwanted signals. In this course designing of filter using signal processing tool box was focused. Feature extraction is a process of dimensionality reduction by which an initial set of raw data is reduced to more manageable groups for processing. Feature extraction involves understanding the signal parameters in various domains like time, frequency and time-frequency domains and extracting the features in these domain. Classification is the process of predicting the class of given data points. Classes are sometimes called as targets/ labels or categories. Classification predictive modeling is the task of approximating a mapping function ( $f$ ) from input variables ( $X$ ) to discrete output variables ( $y$ ).

This open course is designed such that, students will learn basic programming concepts of MATLAB and Simulink. They will be exposed to hands-on sessions on MATLAB inbuilt functions using various tool boxes like Signals processing tool box, neural network tool box, deep learning concepts, Machine Learning application. Using these concepts, student will be able to analyze signals and develop classifiers based on the features extracted.

**Feedback from external expert:**

1. External experts were happy to share their expertise in the course
2. They appreciated the conduction of such value added courses

**Feedback (critical) from students:**

1. The only suggestion is if we had more number of days we could have learnt the concepts deeper.
2. Though the course was off academic, we didn't feel the burden. It was very informative and I have been excited about the topics dealt and I'll use them in the future properly.
3. I seemed, the applications explained by every professor was really interesting

**Feedback from External participants (if any):**

1. Overall it's nice workshop. please organize workshop on only Deep learning techniques

**Corrective methods/suggestions to consider while conducting open course next time (at least two points)**

1. More on inter disciplinary application oriented courses can be planned
2. More courses should be offered

Curriculum Gaps: (Please indicate the gaps in terms of POs/PSOs)	<ul style="list-style-type: none"> <li>• <b>Software tools such as ANDROID Studio and programming with JAVA, Visual tools to simulate the working of different APPs were demonstrated with Hands-on experiments.</b></li> <li>• <b>The POs mapped includes PO1, PO2, PO3, PO5,PO6,PO7,PO10,PO11,PO12</b></li> <li>• <b>PSO1 is mapped as it includes</b></li> </ul>	

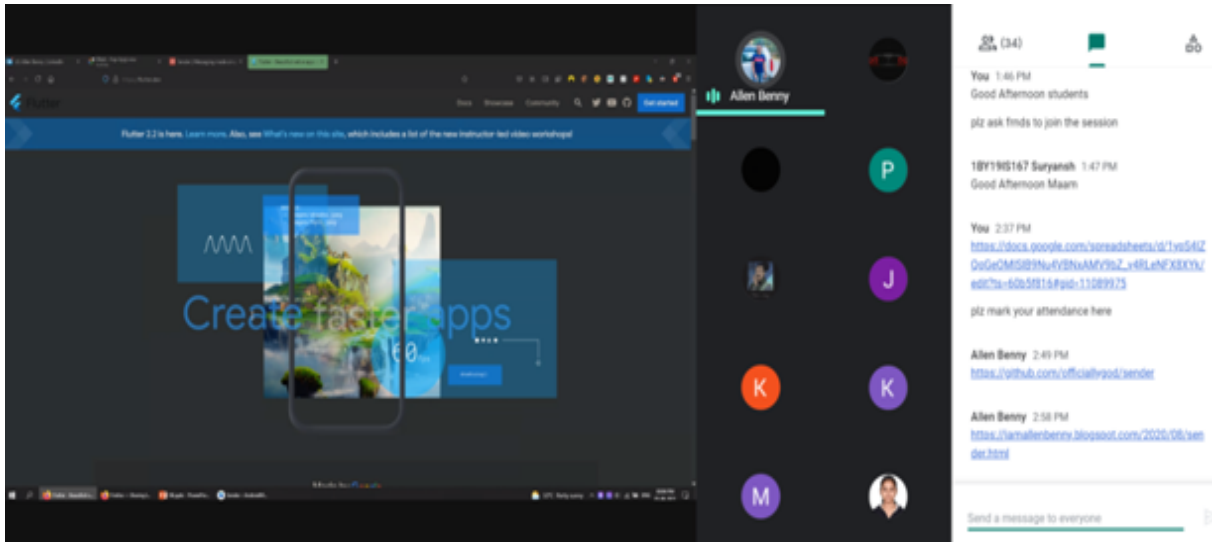

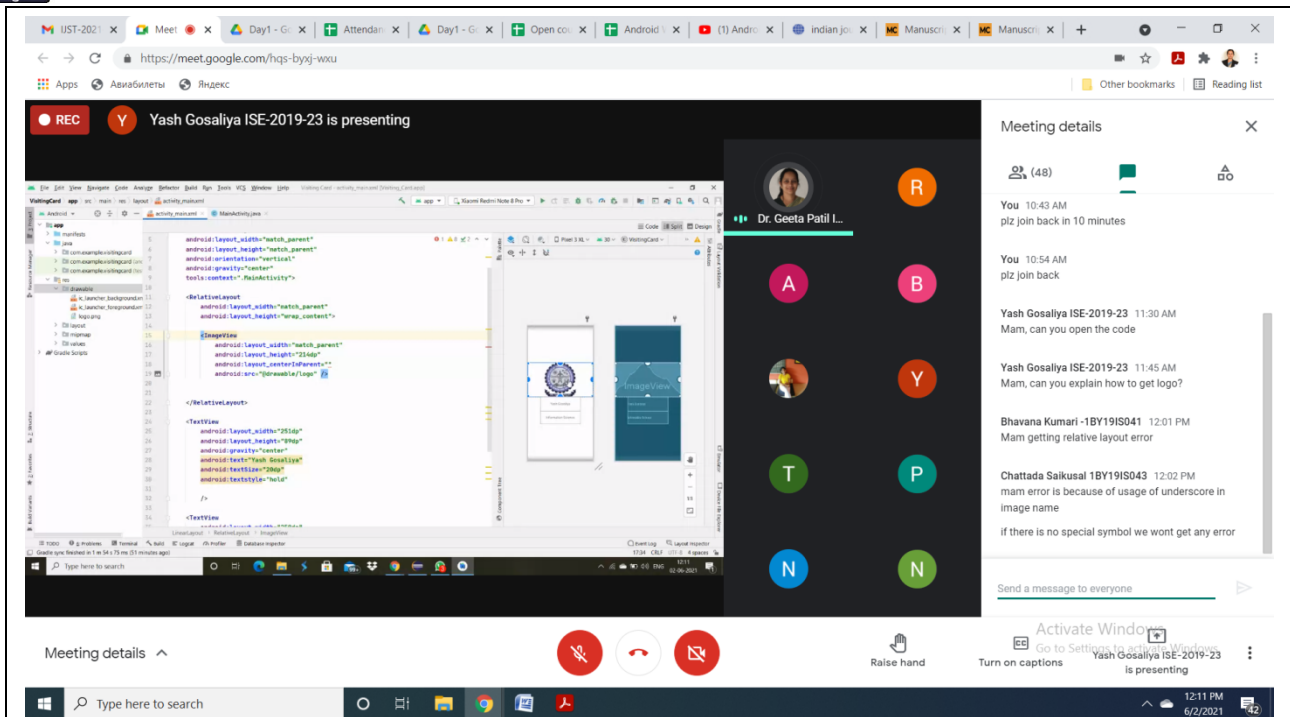

Abstract (Brief Details of the open course with less than 250 words)

**ANDROID** mobile applications have influenced most of the industries as part of the digital revolution today. It transformed the mobile app market. There is a broad range of Android apps, particularly in the business world. Android app development is the process by which applications are created for devices running the Android operating system. Mobile applications provide different platforms to business and brands. Mobile Apps connect companies directly with users and make better engagement with customers. Mobile apps provide many benefits to companies like better connectivity between user and company, increase user base, better business reach and a major benefit is it makes the brand world popular in minimum time.

Practice of niche technology like ANDRIOD and other helps students to know the industry requirements better. This builds confidence in students to present themselves in placements to get better opportunities. Some students were able to take their learning further to build good projects and setup companies or to work as freelancers.

### Photograph of the event:

Open Course Outcomes Of “ <b>ANDROID Application Development</b> ”	<b>CO-1</b>	Apply essential Android Programming concepts.
	<b>CO-2</b>	Install and configure Android application development tools.
	<b>CO-3</b>	Design and develop user Interfaces for the Android platform.
	<b>CO-4</b>	Design and develop mobile applications, using development tools and environments.

### CO-PO Mapping for open course of “**ANDROID Application Development**”

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1
CO1	3												
CO2	3	2											
CO3		2	3		3								
CO4					3	1	2			1	2	2	

#### Feedback from external expert:

1. They enjoyed the session with students.
2. More time is required to cover the course in depth.

#### Feedback (critical) from students:

1. Few students expressed that more number of real time projects demonstration.
2. Some students expressed more contents in the course

**Feedback from External participants (if any): -NIL-**

### Corrective methods/suggestions to consider while conducting open course next time

1. The pace of few sessions were little faster.
2. Expressed about the need of some relax time in between to refresh

### Sample course feedback form

Curriculum Gaps: (Please indicate the gaps in terms of POs/PSOs)	POs: 3,5,10,12 PSO:1
Abstract	<p>The knowledge of DSA is tested significantly in the technical hiring process of many companies. This is because the problems that these companies encounter daily are quite huge and complex, and they want to hire smart people who will solve these tasks within minimal time and the least number of resources. Advanced knowledge of Data Structures and Algorithms is a clear indicator of the person's capabilities in solving complex problems in minimal time. In order to face the new market environment which is in constant change, the company must place the customer in the center of its attention. As a result, the company will not follow, first of all, the benefit brought by a certain successful business, but to develop long-term business relationships with the same customers. The integration of Web technologies has an important place into the process of accomplishing companies' objectives to increase the competitiveness degree on the market by generating customers' loyalty. Developing a web-site makes it possible a very good communication with the clients, and this leads, finally, to a constant adaptation of the company's offer to the continuously changing customers' requests.</p>

### Photograph of the event:

Open Course Outcomes Of “ <i>Programming for IT Career</i> ”	<b>CO-1</b>	Apply data structures concepts to solve real time problems
	<b>CO-2</b>	Analyse and choose suitable data structure for complex problems
	<b>CO-3</b>	Design sustainable solutions for complex problems
	<b>CO-4</b>	Engage in self-learning to get eligible for placement

### CO-PO Mapping for open course of “*Programming for IT Career*”

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1
CO1	3												
CO2		3											
CO3			3	2									3
CO4										3		3	

### Feedback from external expert:

1. More practical for Core concepts for Placement point of view
2. Students were very interactive over the sessions.
3. To train students in Data structures, web technologies, AI, data science, Machine Learning, Algorithms , Blockchain, Cloud and Web domain

### Feedback (critical) from students:

1. They thought us most of the concepts, I would like to enhance and work more on that.
2. Include algorithms like Dijkstra's, bellman ford. Other placement related topics like deadlock os etc instead of web development session
- 3.The course was taken very well. It would have been better if we also could attempt an aptitude test .

### Feedback from External participants (if any): -NIL-

### Corrective methods/suggestions to consider while conducting open course next time (at least two points)

1. Add other important subjects required for placements like OS, CNS, DBMS
2. Giving resources/materials for the preparation for the entire Placement preparation (aptitude, technical interview, coding, hr interview) would also benefit all of us

### Sample course feedback form

Abstract (Brief Details of the open course with less than 250 words)	<p><b>Over all aim of the open course was to introduce the new technology called as IOT and demonstrate some hands-on session on IoT. Introduction to IOT which was handled by Dr Surekha K.B. The history behind IoT was narrated to the students. How the evolution of Internet of Things happened from the days where the availability it self was not there was also discussed in the session. Architecture of IoT, real time examples on IoT was discussed. Students enthusiastically asked the questions on one particular example “vehicle to vehicle communication”. Structure of the IoT and Why IoT is becoming a popular technology in the coming days was also discussed in the session, challenges in IoT, protocols used in IoT was also discussed.</b></p>	

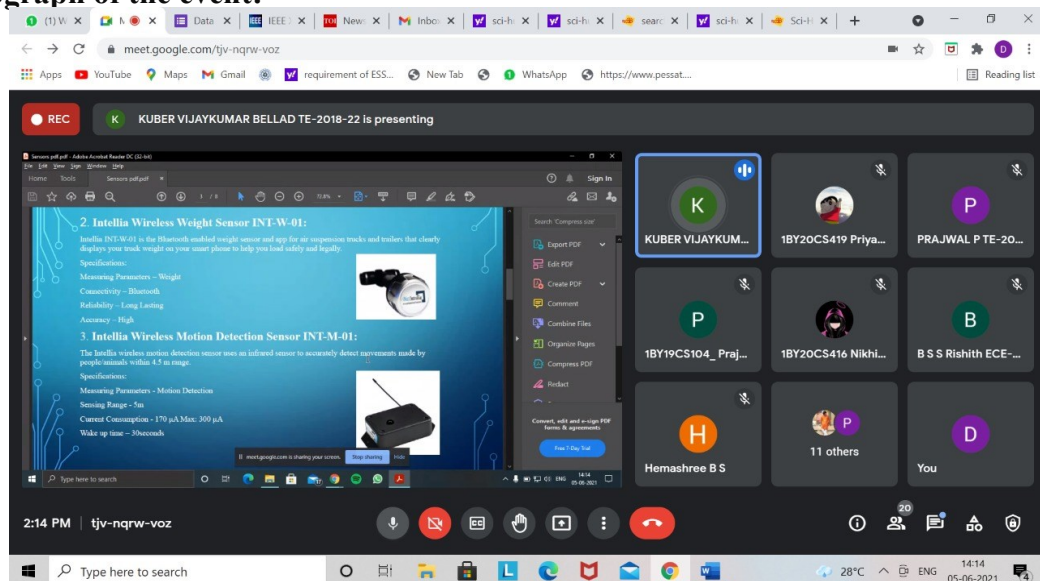

In the next session Dr Narasimha Murthy, explained the topics “Overview of Sensors, Analog and Digital Sensors”. The session was started with couple of questions on fundamentals of IoT, further the brief idea about IoT and its requirement in today’s modern life was highlighted. Sensors, its types, and need of sensors in every IoT application was discussed. Adding to the above the discussion was also made on some real time applications of IoT in creating smart home, smart office etc., and the types of sensors used.

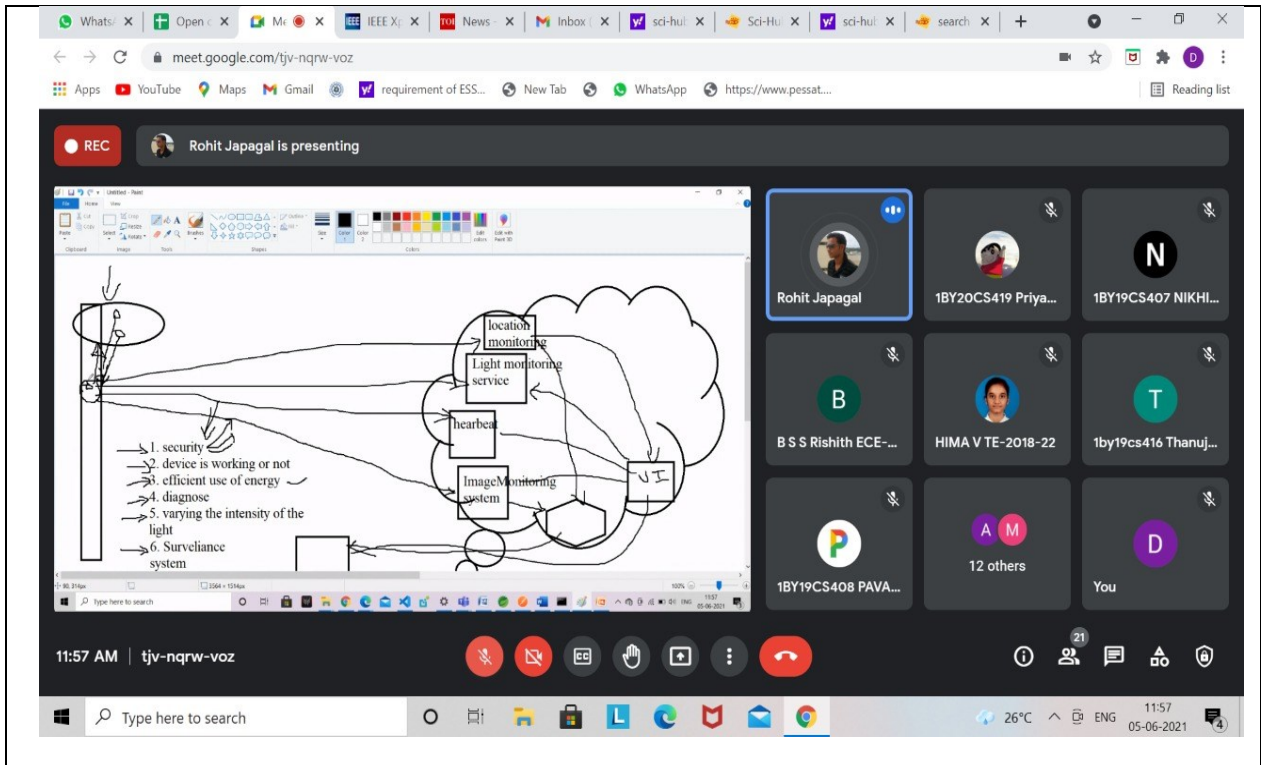

Further sessions, Dr. Shridhar Sanshi gave a hands-on session on using of online simulator tinkercad. Explained how to develop a sketch and design a circuit. Explained working principles of various sensors such as temperature, Photoresistor, servo motor, potentiometer, soil moisture, PIR sensor. Hands-on sessions on interfacing these sensors to Arduino were demonstrated. He also demonstrated the experiments using ultrasonic sensors, controlling DC Motor which can be used in real-time applications. Mr. Anirudh working as a Software Engineer working at Mindtree demonstrated the experiments on the real Arduino board.

The last two days session were handled by Mr. Rohit Jajgal, Software Technologist, PHILIPS Innovative Campus. Mr. Rohit Jajgal is currently working on Real Time Projects on IOT. He gave the introduction about the Cloud Technology and services of the cloud. He also familiarized the students with various cloud platforms used for IoT. He also explained how to make use of the cloud services in IoT. He introduced Heraku Cloud platform to the students. He also took one example of how the sensed information can be uploaded to cloud. He concluded his session with some applications like automobile Industry and Home automation system. In detail, he demonstrated, how IoT sensor collected data can be processed in cloud.

The concluding session students made outstanding presentation on variety of sensors used in different applications, like automobile, health, industry and agricultural applications.

### Photograph of the event:

Open Course Outcomes Of “Internet of Things with Hands-On”	CO-1	Understand the basics of IoT
	CO-2	Summarize the protocols of IoT
	CO-3	Demonstrate necessary and practical knowledge of components of Internet of Things
	CO-4	Analyze the cloud frameworks required for IOT
	CO-5	Develop Skills required to build real-life applications

### CO-PO Mapping for open course of “Internet of Things-Hands On”

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1											
CO2	2											
CO3					3							3
CO4		3				2						2
			3		3	3						2

Feedback from external expert: -NIL-

Feedback (critical) from students:

1. Instead of presenting ppts we can go through a mini project. This improves our project skills
2. By using further new technology

Feedback from External participants (if any): -NIL-

### Corrective methods/suggestions to consider while conducting open course next time (at least two points)

- 1.As a part of the assignment, project can be developed from the students.
- 2.Introducing more Hands-on session compared to Theoretical sessions.

### Sample course feedback form

The image shows a mobile screenshot of a Google Forms survey. The form is titled "IoT with Hands-On Open Course Feedback, Dept. of ISE". It includes a description: "Feedback regarding the open courses conducted by Dept. of ISE,BMSIT &M!!" and a red asterisk indicating required fields. The form contains several input fields: "Name" (filled with "NIKHITHA B"), "Official Mail-Id" (filled with "dipcse11@bmsit.in"), "Department" (radio buttons for ISE, CSE, ECE, EEE, with CSE selected), "Semester" (radio buttons for 2nd, 4th, 6th semester, with 4th selected), and "USN" (filled with "1BY20CS416"). A Likert scale question asks for "Contribution to learning" with options: "Satisfactory", "Very good", and "Excellent". The "Very good" option is selected. A comment box at the bottom contains the text "Modern skill/tool at the start of course".

4:14 docs.google.com/forms/d/e/ Official mail id: dipcse11@bmsit.in

**Contribution to learning \***

	Satisfactory	Very good	Excellent

Abstract	<p>Artificial intelligence and robotics are bringing drastic changes in the technological fields. Things we only imagined twenty years back have now become a reality. From automated systems at a manufacturing plant to self-serving robots in a restaurant, technology has evolved, driving humans together. In Today's world, AI and robots serve people as problem-solvers, companions, and first-responders. Technology has evolved for good, and it is not going to stop here. This open course focusses on the basics of Artificial Intelligence, Robotics and Arduino Programming with hands on sessions.</p> <p>The course started with the introduction of external resource members, faculty and student coordinators. The first session discussed the basics of ML along with examples and we made our own training model using Google teachable machine. The rest of the day was spent discussing the various electrical components starting from the basics such as resistors, capacitors, transistors etc. to the more advanced components such as microcontrollers including various examples such as Arduino, these components were then demonstrated using tinkercad software along with a basic blinker program. The next day was centered on the concepts of IOT. This included the specific hardware such as sensors, motors, NODEMCU ESP8266 board. The programming of NODEMCU was done using Blynk app. The next two sessions were spent integrating the NODEMCU with web services such as Adafruit IO and IFTTT. The last session was spent utilizing the real IO devices such as sensors and servos. The next day was spent working on first working robot, this started with the construction and working of the LM298N motor driver. Various types of motors such as stepper motors, servos, brushless dc motors, etc. were explained. The next two sessions were spent discussing and constructing a basic line follower bot along with the code implementation and this was a practical session with the actual bot running in the last session. On day 4, in the first two sessions, discussion on Computer Vision in great detail such as the use of opencv and the tensor flow model along with tools such as matplotlib to represent the obtained data was discussed. The next session was spent elaborating the use of AI in real world applications along with the types of ML training models and their efficiency. The last day was split into 2 sessions where the first one detailed the importance of patents and the risks involved with innovations and intellectual property rights. Along with this, a</p>	

case study was presented by the students of 4th semester regarding their project on waste management using ML to determine whether the waste is recyclable or non-recyclable. The afternoon session of the 5<sup>th</sup> day was a quiz to the participants and feedback sessions. Hence, the course came to an end with a formal thanks to all the members who made it possible.

### Photograph of the event:

<b>Open Course Outcomes Of “Robotics with Artificial Intelligence”</b>	<b>CO-1</b>	Apply the concepts of Microcontroller, IOT and Robot programming to solve real world problems
	<b>CO-2</b>	Will be able to select, and apply appropriate techniques, resources, and IT tools for robotics applications.
	<b>CO-3</b>	Demonstrate the ability to build projects using hardware-software co-design.

**Feedback from external expert:**

External resource persons appreciated the way the open course was conducted.

They felt that the sessions would be more useful if they are conducted offline as students would be able to understand well.

**Feedback (critical) from students:**

Students felt that that the resource persons were good

The contents were good and they could understand the practical concepts well as the resource persons explained it well

Arduino and microcontrollers to machine learning and AI was very well explained

**Feedback from External participants (if any):**

**Corrective methods/suggestions to consider while conducting open course next time (at least two points)**

1. Sessions have to be offline
2. The duration was long for online sessions

Abstract	<p><b>PO-3, PO-4, PO-6, PO-7, PO-8, PO-9, PO-10, PO-12</b></p> <p><b>The Open Course was based on Data Science Using Python, conducted by Dept. Of ISE. The Course covered the basics of Python and some aspects of Data Science. The course was started with the introduction to Data Science and how to shape data into analytics. Introduction to python and its components such as Variables, expressions and statements, Conditional Execution, Functions, Loops and iterations, Strings, Files - open data files on your computer and read through the files using Python was explained in detail. Data Manipulation with Lists, Usage of Dictionaries in Python, Data Handling using Tuples, Regular Expressions to handle patterns in strings and extract data from strings using the regular expression programming language, Network programming (How data moves across the network using the Hyper Text Transport Protocol (HTTP)), How we write programs to read data across the network was executed and explained simultaneously.</b></p> <p><b>Few other topics that are important to pursue data science was explained, concepts like Data Visualization- To scrape data from the network, store the data in a database and then read the data from the database to produce in browser visualization of the data, Applying different Technique of Correlation &amp; Regression on the Data set using Python, Applying Uni variate/ Bi variate / Multi variate, Regression Modelling, Introduction to Advanced Regression Machine learning, Random forest technique, Decision Tree, Understanding the Data set and Applying Machine learning models Cluster /Classification model from machine learning philosophy, by understanding the data set was explained by executing in Spyder editor.</b></p> <p><b>Finally, the session was ended with a brief information on use cases and websites that are useful to refer and pursue even after the course ends. Feedback from participants was taken after the acknowledgement was given by the coordinator of the course Dr. Manjunath T. N and all other resource persons.</b></p>

Open Course Outcomes Of “ <i>Data Science using Python</i> ”	<b>CO-1</b>	Apply data science concepts and methods to solve problems in real-world contexts.
	<b>CO-2</b>	Design Python scripts for different data exploration problem statements
	<b>CO-3</b>	Select and utilize the features of modern Tool for data science applications
	<b>CO-4</b>	Demonstrate project management and finance principles for data science applications

**CO-PO Mapping for open course of “Data Science using Python”**

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO3
CO1	X												
CO2		X	X										
CO3					X								
CO4												X	

**Feedback (critical) from students:**

1. It is difficult to concentrate on the same topic for 6 hours a day. The course would be easier if daily hour were reduced and the duration of course was increased.
2. Concepts like regression model, ml algorithms, how to use python libraries were very useful.

**Corrective methods/suggestions to consider while conducting open course next time (at least two points)**

1. Offline training will be good compared to online delivery.
2. Expected more hands-on sessions and mini projects.

Abstract	<p><b>Online Open Course entitled “Essential Mathematics for Data Science and Machine Learning” was organized from 1<sup>st</sup> to 5<sup>th</sup> June, 2021 in which 60 participants registered. There were 4 sessions on each day and the duration of each session was 1 hour 30 minutes. Quiz was conducted after each session and an Overall Quiz and Feedback were collected in the evening of Day 5 using Google Form.</b></p> <p><b>In the morning sessions of Day 1, Dr. Karabi Sikdar discussed about taxonomy of statistics, data types, statistical description of data, frequency distribution, data presentation, measure of central tendency. She also deliberated upon basic fundamentals, installation and use of software, data editing, use of R as a calculator, functions and assignment, use of R as a calculator, functions and matrix operations, missing data and logical operators, conditional executions and loops, data management with sequences data management with repeats, sorting and ordering. An introduction into concepts such as matrix factorization, gradient descent, single value decomposition and principal component analysis was given by Dr. Annamma Abraham in</b></p>	

the afternoon sessions.

The morning sessions of Day 2 initially began with an introduction to Data science followed by an example on Mathematical Model. Then, the concept of Queueing theory was introduced where Mrs Anitha Kiran explained about Queues found in real life, assumptions made in any queue, the distribution followed by Arrival and Service process, the Queue discipline followed in any queue, customer behaviour, etc. Later, the 2 models M/M/1, M/M/S models were explained in detail. The session concluded by dealing with various examples on the 2 models viz, M/M/1, M/M/S models. In the afternoon sessions, Mathematical Modelling was explained with some of its classifications by Dr. Annapoorna M.S. Also some basic mathematical modelling problems using differential equations were discussed.

Dr. Kallur V Vijayakumar covered the topic Algorithms in Data Science and Machine learning on the Day 3 morning sessions. In his presentation he discussed about - Algorithm Definition, Necessity, Formalization, Expressing algorithms, Typical steps in the development of algorithms, Simple algorithms examples, What is Machine Learning? Definition, Machine Learning Basic Concepts, How We Get Machines to Learn, Challenges and Limitations, A Brief about Classification in Machine Learning, What is Data Science?, Machine Learning Algorithms, Classification, Common Machine Learning Algorithms, Linear regression, Logistic regression. In the afternoon sessions, Dr. Chethan A. S. gave introduction to mathematical concepts in Machine learning and Data Science. He discussed about the Mathematics preliminaries required to understand the concepts in the topics: Linear Algebra, Calculus, Probability and Statistics. He also discussed about the importance of the following with examples: Gradient descent, Principal Component Analysis and Programming of the above in Python.

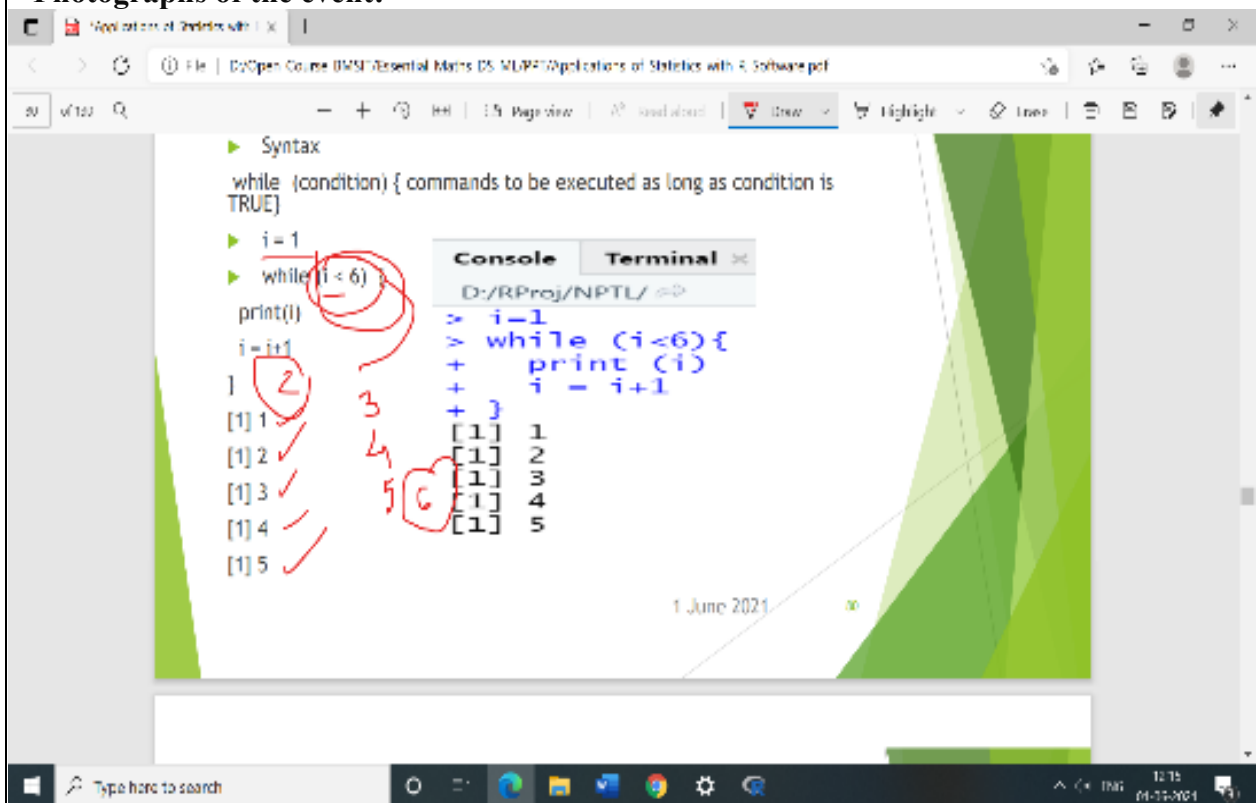

On the Day 4 morning sessions, Dr. Jojy Joseph Idicula explained the terminologies used in Sampling Distribution with examples. She also discussed about Sampling distribution of mean, Null and Alternative Hypothesis, level of significance, critical region, different types of errors and one & two tailed tests. Students could know how to formulate Null and Alternative Hypotheses. They were explained the significance of z-test, t-test and chi-square test and to draw inferences after applying those tests. They were also shown how to use excel to calculate P value, t or chi square statistic & the critical values. In the afternoon sessions, Dr. Shivaprasad Nayak S completely devoted the talk to integers and their properties. He explained the basic principles of Divisibility, Prime and composite numbers, The Fundamental theorem of Arithmetic, Greatest Common Divisor, Modular arithmetic, Congruence relation, The Extended Euclidian Algorithm, Solving Linear Congruence,

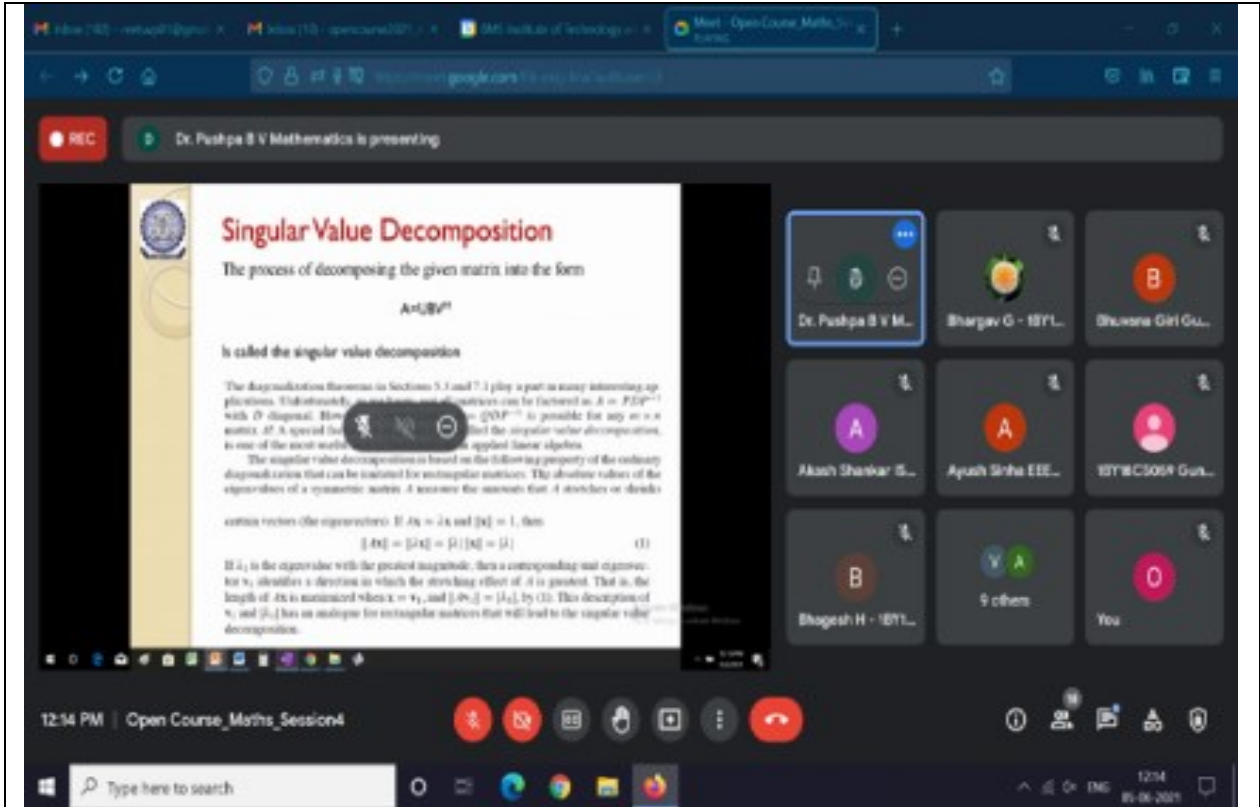

Partition functions and restricted partitions, Basic view of Cryptography and Machine Learning and also looked into some relevant algorithms.

In the morning sessions of the Day 5, Dr. Pushpa B V explained the concepts of linear algebra used in Data Science and Machine learning such as vector space, subspace, linear dependence and independence, inner product, basis and dimensions, linear transformation, orthogonal sets, orthonormals, orthogonal projections, least square solutions, Gram Schmidt process and singular value decomposition. She also discussed some of the applications related to computer science, electrical networks, graph theory and machine learning. Mrs Sreelakshmi T.K. gave brief introduction to Linear Programming, modelling of a Linear programming Problem & to get solution of LPP by using graphical method & Simplex method in the afternoon sessions. She also discussed about Linear regression & its applications. For better understanding of the concepts, various activities were conducted throughout the sessions which could be mapped to PO1, PO2, PO9, PO10 & PO12.

### Photographs of the event:

Open Course Outcomes Of “Essential Mathematics for Data Science and Machine Learning”	CO-1	Understand the concepts of linear algebra applied in Machine Learning
	CO-2	Know the necessity and importance algorithms & understand the use of R software for Big Data analytics
	CO-3	Interpret the concept of divisibility, congruence, greatest common divisor, prime and prime-factorization
	CO-4	Apply mathematical concepts in Data Science and Machine Learning & explain the use of Mathematical Modelling
	CO-5	Formulate the Linear Mathematical model using Linear Programming and Regression techniques & demonstrate the validity of testing of hypothesis

Your opinion about the event  
A wonderful 7 day experience. Learned so many useful things about the subject.

Any Suggestions to improve  
Would love to attend these classes offline. The classes were well curated and the teachers explained the concepts brilliantly. Maybe the online aspect look away from the essence of the entire open course. But still we made the best with what we got. Thank you!

This form was created inside of BMS Institute of Technology and Management.

Curriculum Gaps: (Please indicate the gaps in terms of POs/PSOs)	<p><b>PO5:Modern Tool Usage:</b>  <b>Modern Engineering and IT Tool-Industries using analysis CFD software used is CSFlow. This is Simulation software. University curriculum does not have the CFD hence Open Course is conducted. Teaching by Industry person also involved.</b></p> <p><b>(PSO2:Analyze the fluid and thermal aspects of different mechanical systems.)</b>  <b>The CSFlow software used is fluid and thermal analysis software. Mechanical systems such as ,Flow over aeroplane, flow through blower, flow through Overhead projector, analysis is carried by modern software.</b></p>	

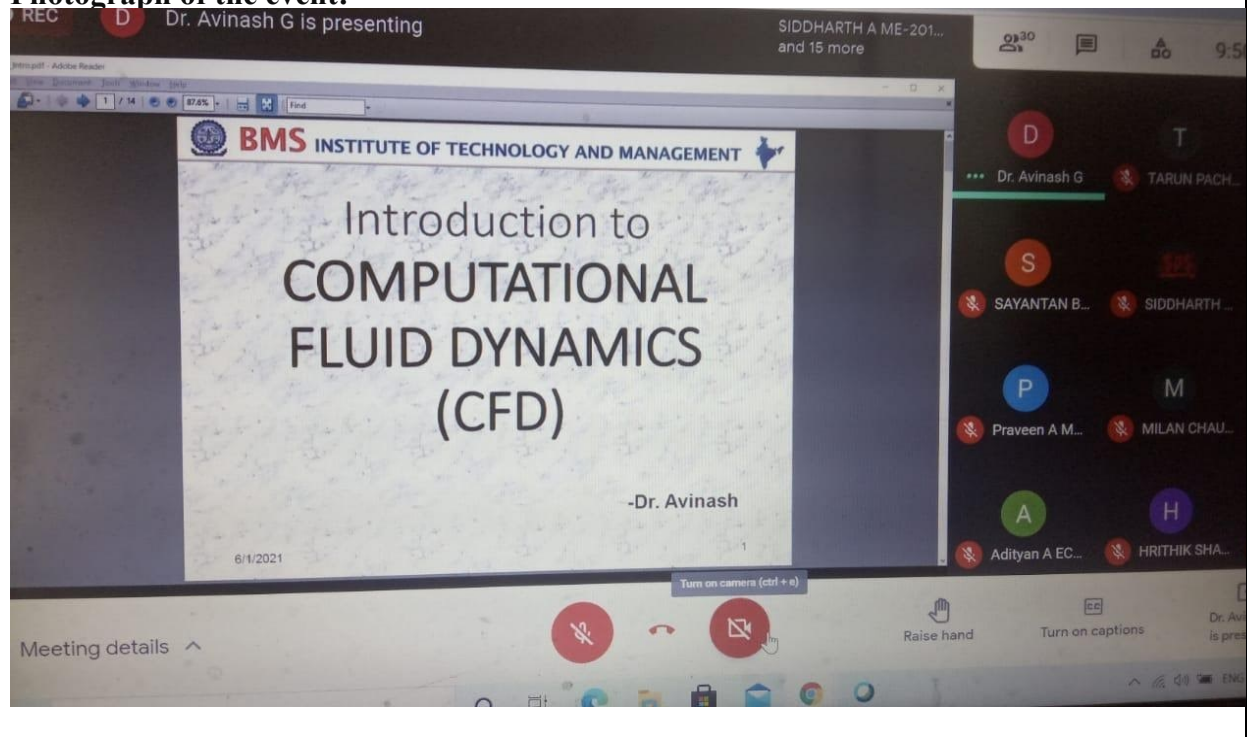

**OPEN COURSE 2020-2021**

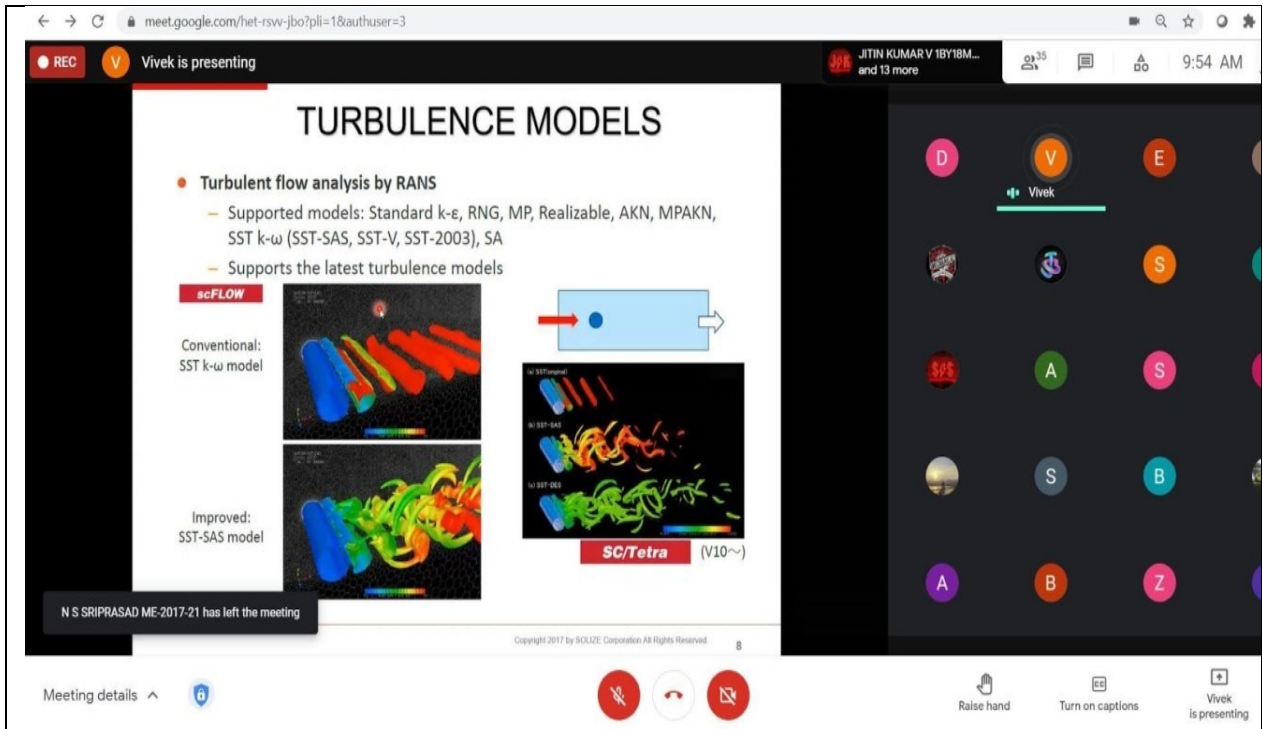

June 1-5, 2021

**Abstract**

In order to give scope for updating the knowledge in the field of CFD , this open course is conducted. The theory and Analysis by using modern industrial software is used. Both Academician and industry expert were involved to teach and give training. Computational Fluid Dynamics (CFD) is the analysis of fluid flows using numerical methods. Using CFD, you are able to analyze complex problems involving fluid-fluid, fluid-solid or fluid-gas interaction. Engineering fields where CFD analyses are frequently used are for example aerodynamics and hydrodynamics. Fluid dynamics is involved with physical laws in the form of partial differential equations. Sophisticated CFD solvers transform these laws into algebraic equations and are able to efficiently solve these equations numerically. CFD analysis has a great potential to save time in the design process and is therefore cheaper and faster compared to conventional testing for data acquisition. Furthermore, in real life tests, a limited number of quantities are measured at a time; while in a CFD analysis, all desired quantities can be measured at once and with a high resolution in space and time. Open course conducted for 5 days by virtual mode. It has been observed that students shown interest in learning the thermal course by using modern software tools.

**Photograph of the event:**

Open Course Outcomes Of “Introduction to Computational Fluid dynamics”	CO-1	Understand the concepts of Partial Differential equations in Fluid Dynamics.
	CO-2	Able to use the governing equations to solve the fluid problems.
	CO-3	Design the fluid flow devices by using software tool.
	CO-4	Analyze the fluid flow over the various components

**CO-PO Mapping for open course of “Introduction to Computational Fluid dynamics”**

**Feedback from external expert: -Nil**

**Feedback (critical) from students:**

1. Personally Felt That The Number Of Sessions Allotted Were Less As This Is A Very Huge Topic And To Be Able To Grasp All Of Those Information In Just 5 Days Is A Little Difficult. By Jayant Bhansali, 1BY18ME022.
2. Things Were Well Explained And The Basic Things In Cfd Are Clear To Me After This

## OPEN COURSE 2020-2021

June 1-5, 2021

Course. I Feel This Particular Topic Requires Lot Of Time To Teach Completely. But It Was Summarised Well In Just One Week. By. Siddharth A, 1BY18ME056

**Feedback from External participants (if any): -NIL-**

**Corrective methods/suggestions to consider while conducting open course next time (at least two points)**

1. Upgrade to use good digital teaching systems
2. Demonstrate more problems by using software tool

Abstract (Brief Details of the open course with less than 250 words)	<b>This course is designed to provide the concepts of Data Analysis in the Microsoft Excel environment. Initially students will be learning the basics excel functionalities followed by progressively increase in the difficulty level as they move along the course, capping with advanced techniques through various case studies. This course helps the students to master in core concepts and various techniques in EXCEL. The course incorporates importing the data from various format into excel., applying basic functions and techniques, analyze the collected data sets,</b>	

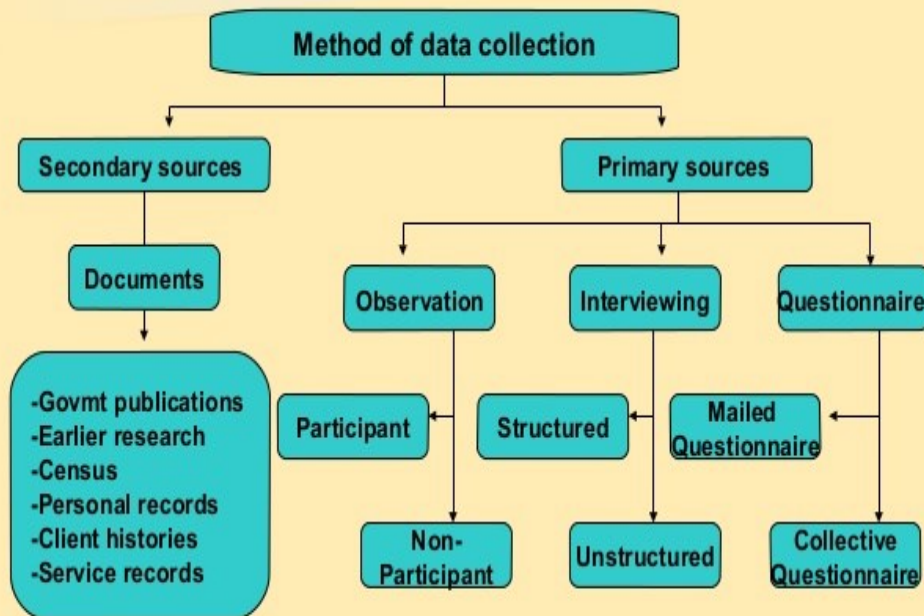

visualize the results through various conditional formatting and charts. Organize data/results in the form of simple tables and pivot tables. Introduce the usage of add-in tools and optimize results with solver/goal seek add-in. Build presentation ready dashboards, create own formulas in Excel based on individual skill sets. Finally, turn any kind of real world data into business insights.

### Photograph of the event:

## Method of data collection

Open Course Outcomes Of “ <i>Data Analysis using EXCEL</i> ”	<b>CO-1</b>	Analyze the given set of data using knowledge of mathematics and basic excel functions
	<b>CO-2</b>	Interpret data using appropriate statistical methods
	<b>CO-3</b>	Apply appropriate techniques to demonstrate the processing and analysis of collected data and illustrate the results graphically.
	<b>CO-4</b>	Communicate effectively using various forms of outputs
	<b>CO-5</b>	Apply scenario based analysis techniques for rational decision making.

### CO-PO Mapping for open course of ‘*Data Analysis using EXCEL*’

CO5		1		3	3					2		3	

## OPEN COURSE 2020-2021

June 1-5, 2021

### Feedback from external expert:

1. The open course was organized very well.
2. The students were very attentive and involved themselves in all the sessions.

### Feedback (critical) from students:

1. Students mentioned that they learnt a lot about Excel and its applications to real world scenario.
2. Hands on sessions were very useful for problem solving

### Feedback from External participants (if any): -NIL-

### Corrective methods/suggestions to consider while conducting open course next time (at least two points): -NIL-

## OPEN COURSE 2020-2021

June 1-5, 2021

additional	Mobile Number/email-id	9945508611
	Topic	ZnO nanomaterials for chemiresistive gas sensors
	Name	Dr. Hareesh K
	Designation	Assistant Professor
	Company/Organization	School of applied sciences, Reva University
	Mobile Number/email-id	9986996834
	Topic	Supercapacitors: Design, Fabrication and Application
	Name	Dr.Udhaya Banu
	Designation	Assistant Professor
	Company/Organization	Centre for Research and Innovations. Adichunchanagiri University, Mandya
	Mobile Number/email-id	8867492598
	Topic	Doped and composite materials for Hydrogen production and Lithium ion battery
	Name	Dr. Prem Sai,
	Designation	Research scholar
	Company/Organization	IIT-Bombay
	Mobile Number/email-id	premsai@gmail.com
	Name	Dr. Nagaraju G
	Designation	Assistant Professor
	Company/Organization	SIT, Tumkur
	Mobile Number/email-id	9620157141
	Topic	Synthesis of novel electrode material for lithium ion batteries
Curriculum Gaps: (Please indicate the gaps in terms of POs/PSOs)	<p>We have covered the following POs through the open course</p> <p><b>PO5: Modern Tool Usage</b></p> <p><b>PO6:The Engineer and Society</b></p> <p><b>PO7:Environment and Sustainability</b></p>	
Abstract	<p>Smart Materials plays a vital role in making devices such as flexible electronic devices, Medical devices, Nano devices, sensors, energy storage devices and water purification devices etc., to make human life simple. This open course aims in familiarizing the participants with various device making materials, which can lead to engineers to setup startup company with the products made with these smart materials. Students of all engineering branches and aspirants who wish to take multi-disciplinary fields are most welcome to join this course.</p> <p>Topic to be covered:</p> <ul style="list-style-type: none"> <li>• Commercial Graphene Products: Introduction and market status</li> <li>• 4th Generation Solar Cell devices for the future Energy Needs</li> </ul> <p>Research Methods &amp; Methodologies for doing good research</p>	

- Multifunctional Nanomaterials for Light Emitting Diode devices
- Super conducting Devices
- Physics of Nano materials fundamentals to Device level
- Sensor Device materials
- Liquid Crystal Display Devices
- Super capacitor, Water filter and Medical Devices.

## SOLAR ENERGY

Dr. C is presenting

Open Course Outcomes Of “ <i>Material for devices: An introduction to Engineering Startups</i> ”	CO-1	Able to understand advanced / smart materials synthesis
	CO-2	Able to apply characterization techniques
	CO-3	Able to fabricate the devices
	CO-4	Able to analyze the materials/devices for industrial applications

### CO-PO Mapping for open course of “Materials for Devices: An introduction to Engineering Startups”

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3								
CO2					3							
CO3			3	3		3						
CO4						3	3					

#### Feedback from external expert:

1. mhowladar –startup expert told that our startup open course is a good choice

#### Feedback (critical) from students:

1. students told that the course is very new, interesting and informative.

#### Feedback from External participants (if any):

1. students told that the course is very new, interesting and informative.

#### Corrective methods/suggestions to consider while conducting open course next time (at least two points)

1. If it is offline, the interaction will be more effective.
2. The hands on training in the research lab would have been given more effectively to students

### Sample course feedback form

1. How well did you achieve this learning goal in this course?

4 responses

- Extremely well
- Very Well
- Slightly Well
- Not well at all

2. How organized was this course?

4 responses

- Extremely organized
- Very organized
- Moderately organized
- Slightly organized
- Not organized at all

3. How do you rate all the Topics delivered in this course?

4 responses

- Excellent
- Good
- Fair
- Poor

4. Rate the quality of online platform used in this course?

4 responses

5. Whether your quizzes had relevant questions as per topics?

4 responses

6. How do you rate the resource persons of this course?

4 responses
