DEPARTMENT OF PHYSICS

Event Name	International Webinar	
Topic	3-D Printing and Its Applications	
Date	19 th August 2020	
Highlights of the event	3D printing is in news since last few years. There is significant confusion and hype around 3D printing. This presentation will discuss the current state of art technology across different industrial sectors. 3D printing is not single manufacturing process but rather a group of processing methods that involve depositing material layer by layer. A brief introduction to these methods will be provided. Some of the technologies and applications are matured and others are in R&D phase. It will provide an introduction to how to use 3D printing to speed up innovation, improve supply chains and understand limitations of existing technology.	
Number of Participants benefited with this	130 participants	
DAY 29.07.2020	Resource Person: Resource Person Dr. Nachiket Patil, Post Doctoral Scholar Lawrence Livermore National Lab, California, USA Young Entrepreneur, Co-founder and inventor, 3DSIM, LLC
