## DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

---

### A BRIEF REPORT ON ALUMNI TALK: CORPORATE CULTURE AND CURRENT TECHNOLOGY

SPEAKER: MR.SHRAVAN, MINDCOM TECHNOLOGIES PVT LTD.

AUDIENCE: IV SEMESTER CSE

#### Following topics were discussed by Shravan (Alumni 2008batch)

**INDUSTRY TRAINING:** **Industrial training** refers to work experience that is relevant to professional development prior to graduation. It provides professional work experience with specific assignments and Responsibilities.

**PROCESS TRAINING:** The **Training Process** comprises of a series of steps that needs to be followed systematically to have an efficient training programme. The training is a systematic activity performed to modify the skills, attitudes and the behaviour of an employee to perform a particular job.

**BILLABLE AND NON-BILLABLE PROJECTS:** **Billable projects** are those projects costs your client agrees to be billed for. For professional service firms such as attorneys, accountants and consultants, the billable resource is typically time. **Non-billable projects** are those projects costs related to your work with Professional that the client is unwilling to reimburse. Funds are paid by company, usually global based software.

**WEB APPLICATION FRAMEWORK:** It is a software framework that is designed to support the development of web applications including web services, web resources, and web APIs. Web frameworks aim to automate the overhead associated with common activities performed in web development.

Some of the platform that is widely used are:

- ✓ JSON (JavaScript Object Notation)
- ✓ MongoDB
- ✓ Liferay
- ✓ AngularJS So on

### RESPONSIVE WEBPAGES (DESIGN) USING:

- SKELETON: The Skeleton framework provides a simple and rapid way of kicking off a web build. With a straight-forward grid and clear typography, Skeleton is arguably the lightest way of introducing yourself to responsive frameworks.
- TWITTER BOOTSTRAP: With the new Bootstrap 3 mobile first grid system creating the responsive and mobile friendly websites has become much easier. As opposed to previous version you don't need to include any additional style sheet to enable responsive feature. It provides better control over the layout as well as how it will be rendered on different types of devices like cell phones, tablets, desktop and laptops, large screen devices etc.
- FOUNDATION: As its name suggests, Foundation is primarily used as a foundation for any responsive website project. It is a lightweight framework packed with rich features designed to quickly develop fast-loading, responsive websites. When designing responsive sites, the mobile-first approach springs to mind as the smartest way to build and this is something Foundation has taken into account in its latest iteration.
